## NEWS SUMMARY

### GENERAL

#### Gunmen storm consul offices

Two Croatians clashing guns and explosives stormed the Chicago West German consulate and threatened to kill six hostages, unless the Bonn Government freed a Croatian Nationalist wanted for murder in Yugoslavia.

One of the gunmen said that the hostages would be tossed out of the building's 10th-floor window if Croatian exile Stjepan Bilandzic was not released from the Cologne jail, where he is awaiting the outcome of an appeal against an extradition order.

In Bonn, West German Government officials held a crisis meeting over the raid. But the Government said that there was no question of West Germany taking action to rescue the hostages.

An Iraq diplomat was shot dead outside the Iraqi embassy in Tripoli by a lone gunman, who was later arrested.

#### Plutonium probe

The Defence Ministry announced that there is to be an independent inquiry into activities at the Atomic Weapons Research Establishment, Aldermaston, after 12 workers were found to have plutonium contamination. Back Page

#### Balloon record

Three U.S. balloons in Double Eagle II landed near Exeter, Normandy, after completing the first-ever Transatlantic flight, and the longest, by free-floating balloon.

#### Officer killed

A Royal Marine officer was killed and a soldier injured when a car bomb exploded in Forkhill, South Armagh. Earlier, an Ulster policeman and a part-time soldier escaped serious injury in two separate gun attacks near Cookstown, Co. Tyrone, and Coalisland.

#### Death jump

A 19-year-old London soldier plunged to his death in a parachute jump at Hanley Common, near Aldershot, during routine exercises.

#### Election boost

The election funds of the Scottish Nationalists were boosted by a £100,000 bequest in the will of an Argyll farmer.

#### Air peace hopes

French air traffic controllers, whose weekend industrial action has crippled European flights, could meet French Government officials today to seek a peace settlement, according to Paris sources.

#### Students protest

Fourteen Iranian students, protesting at the Shah's suppression of anti-Government riots, invaded the Iranian embassy in Brussels and smashed portraits before being arrested.

#### Murder charge

Three South African policemen have been charged with the murder of a black detainee, who died in the Natal province while awaiting sentence after pleading guilty to theft.

#### Briefly...

At least 45 people were feared drowned after their boats capsized in floods in the Indian state of Bihar.  
Russian set himself on fire in Moscow's Red Square in protest at the sentencing of Yuri Orlov.  
British squad won the team title at the World Showjumping Championships in Aachen, West Germany.  
Family from the Midlands escaped with minor injuries when a driverless lorry crushed their car on the M2 in Kent.

### BUSINESS

#### Gold falls \$6½ in nervous trading

GOLD fell sharply by \$6½ to \$208½ in nervous trading in London and in New York the Comex August settlement price fell \$5.10 to \$208.90.

● EQUITIES drifted lower after initial firmness and the FT Ordinary index closed 0.7 down at 508.3.

● GILTS were dull with shorts falling 1 and longs 1. The Government Securities Index closed 0.20 down at 98.8.

● STERLING fell 3½ cents to \$1.9400, and its trade-weighted index fell to 62.2 (62.5). The dollar's depreciation, in line with the currency's improvement on foreign exchanges, narrowed sharply to 3.9 per cent against 10.7 per cent.

● WALL STREET was above the 900 level in heavy trading, when the Dow Jones index put on 5.54 to 908.12.

● OECD report on West Germany warns that continued uncertainty on the foreign exchange market, particularly a further rise in the Deutsche mark, could undermine Germany's economic growth prospects. Back Page

● STOCK EXCHANGE is to accept a computer price display service with a television information system capable of handling more data. The new service will come into operation towards the end of next year. Page 8

● CHEVROLET's Linwood manual workers have accepted a 10 per cent pay deal and a potentially bright future has been forecast for the factory. At the same time, the company's UK factories of the proposed Peugeot-Citroen takeover will be discussed at meetings between shop stewards and top management. Back Page

● NUR officials are meeting the London Transport Executive today to seek a solution to the dispute which is disrupting the Underground service. Page 8

● FUNDING of pensions in the public sector should be thoroughly examined, the Commons Public Accounts Committee has urged. Back Page

● ROYAL INSURANCE turned in a better than expected underwriting profit of £2.4m and a 10.5 per cent increase in investment income from the first half of this year, advancing pre-tax profits by 8.8 per cent to £71.8m. Page 20 and Lex

● BERNARD SUNLEY Investment Trust has sold an office block in Brussels for £8.25m. Back Page

## COOL RECEPTION FOR CARTER DOLLAR STATEMENT

### Prospect of U.S. action to calm exchange markets

BY JOHN WYLES, NEW YORK, August 17

The U.S. authorities tonight held out the prospect of a series of policy actions over the next few weeks designed to halt the fall of the dollar and calm the turbulence in foreign exchange markets.

This emerged immediately after a statement by President Carter on the dollar which was followed by a wave of sharp selling in the New York foreign exchange market.

Dealers said the Federal Reserve board intervened briefly in support of the U.S. currency but had little impact because as one said "the President said nothing and he said it badly."

Market reaction would be closely monitored by the Fed and it is possible that the prompt issue of a statement by Mr. Michael Blumenthal, Treasury Secretary, was intended to counter the disappointment. Mr. William Miller, the Federal Reserve Board chairman, was "giving urgent attention" to a number of proposals on the dollar and expect a series of continuing actions to be announced as decisions are reached over the next few weeks. A Treasury spokesman refused to elaborate on the statement, although he did add that it had been made at the President's request.

How well the foreign exchange markets will react to being kept waiting for U.S. Government action remains to be seen but the authorities may hope that knowledge that something is going to happen coupled with uncertainty as to precisely what might at least curb some of the more speculative selling of the dollar.

Much may also depend on how the business cycle, and more particularly the S. inflation rate, is perceived. The S. inflation rate is likely to be about 8 per cent by the end of this year, the President's most serious political problem at home and abroad concerning the dollar is the lack of a credible policy for pay and prices.

The Administration has been reviewing its options for the last few weeks and none of them is likely to produce immediate results. Organised labour is so far totally unwilling to co-operate formally in reducing the level of pay settlements.

All that may emerge from the review is a series of joint committees for various industrial sectors which would aim at producing a series of understandings on appropriate pay settlements. At this Press conference, the President again stressed he would not rule out using an executive order to impose either an all import quota or import fee on oil if Congress failed to produce an acceptable energy Bill.

Had part of the blame for the dollar's woes at the door of Congress. The most important contribution could make to strengthening the trade balance and the dollar would be to pass an energy Bill.

It also included a steady decrease in the U.S. budget deficit which he pointed out was in the "60 billions of dollars" when he was running for office and which he determined to reduce to "the 30 billions of dollars" by fiscal 1980.

The problem for the currency markets is that traders have heard all this before. They argue that the President is not listening to the message which lies behind the weak dollar, that the U.S. Government Budget Bill.

#### Sharp fall after rally

By Peter Riddell, Economics Correspondent

THE DOLLAR fell sharply last night in late New York trading on disappointment at the outcome of President Carter's Press conference. This followed an earlier strong rally in European markets against all other major currencies.

The U.S. currency dropped to DM 1.96 from its London close of DM 1.9825, which represented a 21 per cent rise on the previous day's European close. Against the Swiss franc the dollar fell back to SwFr 1.6200 after a London finish of SwFr 1.63 which was up 4 per cent on the day. Similarly, the dollar fell back against the yen to Y188.30 after a close in Europe of Y188.15, an increase of nearly 3 per cent during the day.

Sterling also regained some of its earlier losses during the day. It closed in New York at \$1.9550, a London close of \$1.9400, which was a fall of 3.60 cents on the day.

These sharp and rapid movements in the late afternoon led to immediate intervention from the Federal Reserve Bank of New York to steady the rate. Earlier, the recovery had continued the modest rally of Tuesday and Wednesday. But even those sharp rises had been sufficient only to offset part of the recent falls. Closing rates for the dollar yesterday, even in Europe, were generally below the levels at the beginning of last week.

The extent of the fluctuations is shown by the fact that while last night's closing rate in Europe of SwFr 1.6500 is more than 64 per cent below the level of early last week.

Similarly, the gold price, which fell by \$61 an ounce in London yesterday to \$208½, is still 31 per cent higher than in early August. In New York gold closed at \$207.

Foreign exchange market dealers said that the rally might be only short-lived unless the U.S. Administration produced specific measures, rather than mere statements, to answer the market's concern about domestic monetary and inflation developments.

The rally reflected a large amount of covering of short-term speculative positions against the dollar and profit-taking after the recent sharp movements.

## Bank corset extended to curb money growth

BY PETER RIDDELL, ECONOMICS CORRESPONDENT

THE GOVERNMENT has extended its credit squeeze on the banks to the end of the year to ensure that the growth of the money supply remains within official limits.

The so-called corset, or supplementary deposit scheme, was re-imposed in early June and has now been extended from this autumn until mid-June 1979. The scheme limits the growth of the banks' interest-bearing liabilities and, therefore, effectively restricts lending.

The clearing banks, in particular, have faced difficulties in making adjustments necessary to come within the corset limits and may face penalties later this year.

The extension of the corset has been announced now to make clear to the banks what the position will be throughout the next year. The Bank of England said yesterday that the limits, which will allow slightly more growth in interest-bearing liabilities from the autumn onwards than at present, had been fixed to leave room for adequate lending to priority borrowers.

The extension was announced yesterday in a statement published in the London Gazette. The rate of monetary growth last month was the highest since April, though still well within the target range.

Sterling M3, the broadly defined money supply, including cash and bank current and seven-day deposits, rose by 1.1 per cent, seasonally adjusted, in the first three months of the month to mid-July. This compares with increases of 0.8 and 0.3 per cent in the previous two months.

The rise in July, which was broadly as the City expected, was sufficient to boost the annual rate of growth of sterling M3 in the first three months of the financial year to around 9½ per cent.

This is slightly above the bottom end of the official target range of 8 to 12 per cent for 1978-79 as a whole. Monetary growth was boosted last month by substantial inflows from abroad, associated with the strong demand for sterling in the period. This may not be as significant in the August banking figures.

## £100m mine deal with China near

BY JOHN LLOYD

BRITISH MINING equipment manufacturers are reaching the final stages of negotiations with the Chinese Government for the sale of machinery worth more than £100m.

At the same time, British industrialists who accompanied Mr. Edmund Dell, Trade Secretary, on his recent visit to China, forecast that the industrial expansion laid out in the Eight-Year Plan could mean a market worth up to £1bn, and possibly more — for UK manufacturers in the near future.

Already, Davy Powergas, the process plant contractor, has won a contract worth about £40m for building two petrochemical intermediate plants. Earlier this year, the company's German subsidiary won a contract also for a petrochemical plant, worth about £10m.

Northern Engineering Industries, the power plant manufacturers, has tendered for a £75m fertiliser plant order in collaboration with Humphreys and Glasgow, the contracting engineers. Sir John Buckley, chairman of Davy, and Sir James Woodcock, chairman of NEI, accompanied Mr. Dell.

### Prospects

Sir John said that the "prospects for Davy and for British industry are excellent if we can work hard at the market." Days of negotiations with the British Steel Corporation to win a £1bn order for one of the 10 major integrated steel plants which the Chinese plan to build.

Sir James said that the power plant market was enormous, especially in the 500 megawatt, 50 cycle sets in which UK manufacturers had a great deal of experience.

The three UK mining machinery manufacturers who are nearing the end of lengthy and complex negotiations are Anderson Mavor, Dowty, and Gullick Dobson. They hope to supply powered roof supports, conveyors and power loading equipment required by the Chinese to exploit their extensive coal reserves. The plan calls for the construction of 10 large mines.

Sir Derek Ezra, chairman of the National Coal Board, said that the Chinese were attracted by British consultants and manufacturers because the longwall mining methods used in China were similar to those used in the UK.

The three machinery manufacturers would not specify the respective sizes of their likely contracts, but it is thought that Davy will take the largest order, for conveyors and roof supports, worth about £70m.

Anderson Mavor, which manufactures power loaders and con-

veyors, may take upwards of the £10m. All three companies are strongly geared towards exports. Cullick Dobson, a direct competitor of Dowty in the manufacture of roof supports, recently announced a £10m investment programme over the next two years, and has employed 250 more workers to cope with extra demand.

The companies are familiar with the Chinese market, having won about £50m-worth of orders among them four years ago. They believe that the performance of their machinery has been highly regarded. On winning the present round of contracts, they intend to collaborate to ensure that their machinery is fully compatible with each other's.

Other leading industrialists who have recently returned from the trip expressed optimism over prospects in the Chinese markets, stressing that the mission was undertaken at an opportune time, when the Chinese had taken a decision to liberalise their trade policy.

Sir Arthur Knight, chairman of Courtauld, said he expected a large expansion in sales of fibres and paints—especially marine paint—to China, as well as fibre processing plant. The company's exports to China total about £10m a year, and 12 years ago it built a fibre plant at Langchow.

Mr. Robert Aldred, chairman of Taylor Woodrow, said that he had identified a number of areas in which UK construction companies could be competitive.

### Excellent

He had been able to have preliminary discussions on projects in which Taylor Woodrow might become involved. Mr. Graham Strachan, managing director of John Brown Engineering, said excellent opportunities existed for the John Brown Group as a whole, especially in the fields of offshore equipment and gas turbines.

John Brown is already the main supplier of gas turbines to China, having sold nine of the 15 now in use there.

Mr. Strachan thought the Chinese might decide to use gas turbines of between 20 and 100 megawatt capacity to bring power to rural areas.

Mr. David Chapman, of PE Consultants, said the Chinese were interested in investing in high technology for use on a large scale. These developments would call for a consortium approach, in which the role of consultants was a vital one. British consultants would return to China for a more detailed presentation soon.

## EUROPEAN NEWS

## Moscow in August: muzak and tourists

By Anthony Robinson, East Europe Correspondent

LENIN'S SLOGAN "Communism is Soviet power plus the electrification of the whole country" shines in white neon across the Moscow river in front of Moscow's largest hotel.

But in August most of the men who wield that Soviet power are on holiday in the Crimea. The sleek black Zil cars with curtained windows which carry them around are few and far between and Moscow is left to the tourists from abroad—or from the furthest reaches of this vast multi-racial land itself.

Red Square, which only last month was taken over for the state funeral of Politburo member Fyodor Kulakov, is thronged with sightseers peering at Lenin's Mausoleum or awaiting the mechanical, wide-arm swinging goose-step of the soldiers changing guard.

Language is a major deterrent against straying far from the beaten track for most visitors. There are virtually no multilingual signs in Moscow to guide those unfamiliar with the Cyrillic script. The visitor steps into the Muscovite's Moscow almost as soon as he leaves the hotel.

Although Stalin dotted the city with seven extraordinary skyscrapers in Socialist Gothic style, and his successors transformed Kallin Prospect into an avenue of tower blocks like London's Whitehall, the rest of inner Moscow is still surprisingly low-key and human.

## Squat ladies

The trees and gardens which once lined the inner ring road have long been torn down to provide a four-lane race track for the buses, trucks and cars. But inside the ring much of the city still consists of houses pre-dating the Revolution. These pastel-painted houses line wide, residential streets.

A stroll up Gorki Street is rewarding. To walk past the central post office, the Moscow Soviet and the pre-revolutionary stores to Pushkin Square is a must. It is one of the main shopping streets and comparing what people wear with what one sees on sale in the shops, is a perplexing exercise. For although the crowd consists of large squat ladies with a determined air and heavy peasant look there are also plenty of younger people quite elegantly attired.

Where do they get their clothes? Some, from the thriving black market in jeans and Western clothes bought unofficially from foreign tourists. But in a big store near the Bolshoi Theatre, I also noticed a long queue for a selection of smart looking summer shirts. On the shelves, the consignment of oranges arrived at my hotel. Everybody in front of me in the line bought as many of them as he or she could carry. By the time I got to the head of the queue there were none left. It was exactly the same with the shirts.

My conclusion from this is that the shoddy, rotting fish, badly packed foodstuffs and mouldy vegetables one notices in the shops are a sort of reverse loss-leader. They advertise nothing but the fact that the state goods have either not arrived or have long been sold out.

Features of the Moscow landscape, as indeed throughout the Soviet Union, are the propaganda "lozenges," slogans saluting the party, proclaiming peace and glorifying the Soviet armed forces (frequently in the same stylised breath).

For all the exhortation, however, it is difficult to spot any evidence of the Soviet Union's attitude towards work. A large number of people appear to be employed in a sitting down and counter-information function. The first time visitor to Moscow soon becomes a regular, even in summer this is a tightly controlled society. The most obvious sign of this is the number of uniformed police at street intersections. The State Secretary at the Economics Ministry, estimated that growth would be 2.3 per cent.

This package has gone some way to meet the OECD Secretary's call for a strong external stimulus. The Secretary's pessimism about the contributions to growth to be expected in particular from exports and business investment, and concern about West Germany's continuing high unemployment and trade surplus.

Thus, exports are expected to rise by volume—by some 3 per cent. However, though imports are expected to rise, in volume terms, by about 6.5 per cent, import prices are likely to fall, because of falling dollar prices and the appreciation of the Deutsche mark.

## CHRYSLER ESPANA-PEUGEOT DEAL

## Communists demand job security

BY ROBERT GRAHAM

THE SPANISH Communist Party has called on the Government to take a firm stand over the proposed purchase of Chrysler Espana by Peugeot-Citroen in order to ensure that jobs are guaranteed. The call came in a statement that was the first formal reaction by any Spanish political party to the proposed deal that would make Peugeot-Citroen the second largest motor company in Spain.

The statement is careful not to condemn the acquisition of Chrysler's Spanish subsidiary by Peugeot-Citroen. But it insists that the Government examine the deal bearing in mind four main criteria.

The statement says that the Government must be satisfied that there are adequate guarantees of job security to maintain the existing level of employment.

## Parliament recalled in Portugal

LISBON, August 17.

PORTUGAL'S Parliament will be recalled from summer recess to meet on Tuesday for a debate on the assembly's standing committee decided tonight.

It was taken virtually for granted that Prime Minister-designate, Dr. Alfredo Nobre de Costa, technocrat and former industry minister, would form a transitional Cabinet of independents and technicians to arrange elections by next spring. They are not normally due until 1980.

Speaking at the signing of a \$300m loan from a group of French, W. German, U.S. and Japanese banks, Dr. Constanco stressed that the economic policies pursued during the first six months of this year had succeeded in meeting a prime objective: a limitation of the balance of payments deficit to an amount capable of being financed without recourse to Portugal's unpledged gold reserves.

According to Dr. Constanco the central bank had its highest level in cash of foreign reserves for many years: \$62m in July and \$97m so far in August excluding loans. The proportion of Portugal's gold reserves which were from uncommitted assets had now risen to 62.4 per cent an increase from volume of 50 tonnes) from its level of 51.4 per cent at the beginning of the year.

Portugal's balance of payments position had been improved as a result of a 28 per cent and 24 per cent increase in tourist receipts and immigration commitments respectively. Out of which averaged 27 per cent in 1977, had during the first seven months of this year been brought down to 20.3 per cent as a result of the Government's stabilisation programme, Dr. Constanco added.

He admitted that Portugal's trade deficit for the first half of this year increased in dollar terms by 9 per cent compared with the same period last year.

OECD REPORT ON W. GERMANY

## Allaying fears about the effects of inflation

BY DAVID HABAKKUK

THE FORECAST in the Organisation for Economic Co-operation and Development's (OECD) annual Survey of West Germany, published yesterday, that the German gross national product will grow by 3 per cent in 1978 is, in fact, at the higher end of Bonn's current projections.

While the official target for growth this year was 3.5 per cent, at the time of the release of the Government's plan for a DM 12.5bn stimulatory package earlier this year, the OECD Secretary at the Economics Ministry, estimated that growth would be 2.3 per cent.

This package has gone some way to meet the OECD Secretary's call for a strong external stimulus. The Secretary's pessimism about the contributions to growth to be expected in particular from exports and business investment, and concern about West Germany's continuing high unemployment and trade surplus.

Thus, exports are expected to rise by volume—by some 3 per cent. However, though imports are expected to rise, in volume terms, by about 6.5 per cent, import prices are likely to fall, because of falling dollar prices and the appreciation of the Deutsche mark.

The consequent gain in terms of trade is likely to mean that the current external surplus will increase to some DM 11.5bn in 1978, against DM 8.7bn in 1977, in spite of the small deterioration in the real balance, according to the survey.

The survey expects profitability this year to be substantially better than last, with net income from property and entrepreneurship forecast to increase by 12 per cent, partly also because of a fall in taxes on such income.

However, the growth in machinery and equipment investment is not likely to exceed 2.5 per cent and, as in recent years, most of this is likely to be for

council elections at Chrysler's plant at Villaverde on the outskirts of Madrid.

This relatively low key approach indicates that the Communist Party is, for the moment at least, taking a realistic view of the deal—realising that the Spanish Government is in a weak position to influence matters.

Even though the government only knew of the deal on the day of its public announcement and the majority of the administration was then on holiday, the absorption of Chrysler Espana is of great significance to Spanish industry as a whole, not just the motor industry. The new group will be the seventh largest industrial employer with a workforce of over 22,000 and many more directly and indirectly dependent upon the group's activity.

At the Chrysler plant, still closed for the annual summer holiday, the main concern appears to be that the new management will undertake a major rationalisation of activity that would downgrade car production and switch emphasis to industrial vehicles, its most profitable activity. The plant currently has a workforce of 13,825 and earlier this year undertook to engage 550 more to cope with increased industrial vehicle production. This move was the result of strong union pressure, the unions refusing to work overtime because they believed this a management device to avoid extra employment. The management for its part was reluctant to increase its workforce so long as Spain's labour laws remained in force that impose tough restrictions on dismissals. Citizens have experienced similar troubles.

## THE DOLLAR CRISIS

## Bonn confident over U.S. moves

BY JONATHAN CARR

THE BONN Government today welcomed President Carter's statement on the dollar and affirmed that West German monetary authorities would continue to seek to counter disorderly conditions on the exchange markets. For its part, the Government planned no additional measures in the currency field.

Herr Hans Matthöfer, said he was confident that the measures contemplated by the Americans (which have not yet been specified) would be taken speedily and would help restore confidence. He repeated his view that the dollar rate at present

## Swiss to assist exporters

BY JOHN WICKS

THE SWISS Government will take steps to improve the working of the foreign exchange market and will aid exporters and the tourist industry as a response to the recent appreciation of the Swiss franc.

This was announced in Bern at midday following long government Federal Council consultations on the monetary situation.

As one immediate move to counter the upswing in the national exchange rate, the Swiss National Bank has been instructed

to examine measures to improve the functioning of the foreign exchange market. As part of this job, the National Bank is to "consider further adjustments to provisions warding off foreign money."

This vague statement is generally taken to mean that restrictions such as the partial ban on new portfolio investments by non-residents or the strict limitations on forward transactions in Swiss francs might be eased.

Mr. Mueszlinoglu will also hold discussions with U.S. officials and banks on the subject of fresh

loans. Officials in Ankara have started expressing growing impatience and concern about Turkey's prospects of obtaining a fresh \$2bn to finance this year's trade deficit.

Turkey's financial problems are causing worries among OECD exporters whose Turkish markets have been contracting since the beginning of last year.

Finance Minister Ziya Mueszlinoglu is on an unexpected visit to Washington for a range of discussions. They will include discussions with the IMF for release of a \$50m second tranche stand-by loan. The first tranche of \$150m was disbursed last April.

Mr. Mueszlinoglu will also hold discussions with U.S. officials and banks on the subject of fresh

## \$100m Turkey loan agreement

BY METIN MUNIR

Turkey is hoping to raise a \$500m Euroloan before the end of this year through the management of eight international banks, including Barclays, which met in London today.

Despite the pledge to counter "disorderly conditions," there continues to be little sign of intervention by the Bundesbank to support the dollar—reliance widely placed by the German commercial banks.

Dr. P. Wilhelm Christians, president of the German Banking Federation, said such intervention would not in any case be able to hold the rate against the market. At present, the only reasonable course from the German viewpoint was to leave the field to market forces. These carried the dollar on the Frankfurt exchange today to DM1.9773—strongly up on the DM1.9444 yesterday and five pence more than Tuesday's record low.

Dealers felt the recovery was due partly to yesterday's White House announcement, partly to a technical recovery which had set in even before Mr. Carter's statement was made known.

While there have been some statements of concern from politicians and businessmen about the impact of the dollar's fall on German exports, these appear this time to have been relatively muted.

The figures for West German trade with the U.S. in the first half of this year—even though they relate to a period before the latest dollar weakness—make somewhat surprising reading. They show German exports up 17 per cent against the same period of the previous year.

Imports from the U.S. rose by 10 per cent in the same period. The balance of trade with the U.S. was in surplus for the first time in 1978.

Imports from the U.S. rose by 10 per cent in the same period. The balance of trade with the U.S. was in surplus for the first time in 1978.

## Chairman Hua gets red carpet treatment

By Paul Lendvai

BUCHAREST, August 17. A BEARING Chairman Hua today toured one of the largest Romanian heavy engineering plants in Bucharest and conducted the second round of talks with his Romanian host.

An official communiqué merely stated that the negotiations were proceeding in an atmosphere of "cordiality and friendship, of mutual understanding, characteristic of the good relations that exist between the two parties, countries and peoples."

The Chinese leadership regards Chairman Hua's visit to the Balkans as a kind of debut—his first appearance on the international stage as a world leader. It has therefore also decided to take what a Chinese official privately described as a "diplomatic" line in public statements. It is understood that Chinese officials resented the implications in some western press reports that Chairman Hua, at a hastily called last night, attacked the S. at Union.

Neither Chairman Hua Kuo-feng nor Romanian President Nicolae Ceausescu mentioned the Soviet Union by name in their toast at last night's state dinner given by the Romanian president in honour of Chairman Hua.

The Chinese leader predictably praised Romania for defending national independence and state sovereignty, for opposing all kinds of interference in the internal affairs of other countries and extolled what he called the "very good relations" between the two countries.

Chairman Hua issued a warning against the expansion of imperialism and hegemonism (the usual code word used by China for Soviet foreign policy in Asia, Africa, Latin America and Europe).

But his speech was by Chinese standards, notably low key. A comparison of the speeches delivered here last night with the text of the toast made at a similar banquet in Peking a few months ago shows if anything an even more moderate language used by both speakers.

Romanian President Ceausescu referred to the forthcoming anniversary on August 23 of the national and fascist armed insurrection in Romania, without even alluding to the role of the Red Army which in 1944 liberated large parts of Romania. He also praised China's "outstanding contribution to advancing the prestige of Socialism in the world" as well as the successes of China.

Reopening the line would significantly improve the copper exporting capability of both Zaire and Zambia, whose president, Dr. Kenneth Kaunda, has been instrumental in persuading the two men to meet. Benguela Railway officials have been advising Zambian mining authorities that they anticipate limited shipments along the line in about three months. Before its closure in August 1975 because of the Angolan civil war both countries used the line for over 50 per cent of their copper exports.

Zambia is now committed to the congested Chinese-built Tazara line to Dar es Salaam, while Zaire uses the lengthy southern route to South Africa, via Zambia and Rhodesia, and its own laborious (voile nationale) rail-river route to Matadi.

Reopening the line is very much the measure by which Angola's internal stability can be judged, since it has frequently been put out of action by the UNITA guerrillas of Dr. Jonas Savimbi. UNITA was defeated by Dr. Neto's Cuban-supported MPLA in the civil war which ended in 1976 but has since been waging a doctored guerrilla campaign in the centre and south of Angola in the face of frequent and thus far unsuccessful Government attempts to quash it.

President Neto has said he is prepared for the line to be reopened provided Zaire withdraws support for anti-government guerrillas of both UNITA and the second pro-western group defeated in the civil war—Hnhlen Roberto's Kinshasa-based FNLA. President Neto has informed President Mobutu indirectly that he is ordering the disarmament of UNITA and the FNLA. "Rumba's" FNLC which withdrew to its Angolan bases after the bloody massacres in the Shaba mining centre of Kolwezi last May, Zaire and Angola have already agreed on repatriating some other refugees, which there at least 500,000—and this seems to include agreement in principle for both sides to ditch the guerrillas they have thus far used against each other: the FNLA and FNLC.

President Neto's trip to Kinshasa could have wide-ranging repercussions in Africa and the West. For one thing it is the first step for a long time of a readiness to talk across the East-West ideological gulf that is increasingly dividing the Organisation of African Unity (OAU). It also envisages with UNCTAD's gradual readiness to co-operate with the West to offset its continuing dependence on the Soviet Union and Cuba—although President

Neto has made clear that while he is ready to go as far as establishing diplomatic relations with Washington, this does not mean he will either abandon his Marxist aspirations or reduce the number of Cuban troops in his country as a trade-off.

Presidents Neto and Mobutu both need a stable common border—in Zaire's case to stave off further FNLC attacks and induce some of the 600-700 foreign technicians who ran the Kolwezi mines to return, and in Angola's case to stabilise the north of the country and the oil-rich Cabinda enclave so that Cuban and Government forces can concentrate their attentions on UNITA in the agriculturally rich central belt and remote southern area. Neither country has enough trained personnel border to prosecute a simmering border dispute and engineer the economic revival they need to fully exploit resources of coffee, diamonds and minerals.

It seems certain, however, that the Kinshasa talks alone will

not be enough to bring real stability to either country. Angola has supported the Western initiative on Namibia since its main hope of defeating UNITA lies in a Swapo-dominated settlement in Windhoek that will rob Dr. Savimbi of his prime supply base. The U.S. is reported to have assured President Neto that it will not provide fresh covert support to UNITA despite plans to do so at the time of the Shaba crisis. UNITA's settlement in Namibia, however, there seems limited prospect of domestic peace in Angola that would lessen Luanda's dependence on the Soviet Union and Cuba and guarantee the viability of the Benguela line.

President Mobutu faces different problems, even if Dr. Neto delivers up the FNLC. The disaffection of the Lunda tribe in Shaba from which Colonel M'bumba draws his main support is such that the area will remain a potential hotbed of rebellion until President Mobutu reverses his previous repressive policies and allows the Lunda a degree of autonomy and a far greater share of the province's copper and cobalt revenues. The Kolwezi mines are running at anything between 30 and 30 per cent of pre-crisis levels, and Zambian mining sources estimate that 1979's cobalt production from Zaire, the Western world's highest, will be less than 1978's. Mining experts say that unless a substantial number of foreigners can be coaxed into returning to a stable Shaba, the Kolwezi mines that account for over a third of Zaire's net foreign exchange can only slide further into inefficiency.

Underlying the chances for real détente between Zaire and Angola, however, is the deep mistrust between Zaire and Angola that will make any initial steps towards rapprochement fragile and prone to fresh flare-ups of tension.

## THE ZAIRE-ANGOLA TALKS

## Mutual mistrust underlies a crucial meeting

BY OUR OWN CORRESPONDENT IN LUSAKA

PRESIDENT Agostinho Neto of Angola and Mobutu Sese Seko of Zaire are to meet in Kinshasa on Saturday. The talks are prompted by an array of internal and external pressures on both men and will aim at easing long-standing tensions between two of Africa's most bitter foes.

Any optimism generated by the prospects of meeting, however, is tempered by the deep mistrust felt by two ideologically hostile neighbours who have persistently supported attempts at insurrection by the other's internal forces.

President Mobutu is under strong western pressure, following last May's rebellion in mineral-rich Shaba province, to effect détente with Angola. This would be in return for a western-backed economic rescue operation aimed at offsetting the dire results of the Shaba insurgency, which hit production of both copper and cobalt. Fresh Western-sponsored talks on the revival are due to be held in October in Brussels.

The automatic and pro-Western Zairean leader, is apparently anxious to come up with proof that he is complying with western conditions—which include demands that he start trying to rectify his crisis-stricken economy—thus he is keen to put into effect an agreement in principle with Angola to reopen the British-owned Benguela Railway running from Shaba to the Angolan Atlantic port of Lobito.

Reopening the line would significantly improve the copper exporting capability of both Zaire and Zambia, whose president, Dr. Kenneth Kaunda, has been instrumental in persuading the two men to meet. Benguela Railway officials have been advising Zambian mining authorities that they anticipate limited shipments along the line in about three months. Before its closure in August 1975 because of the Angolan civil war both countries used the line for over 50 per cent of their copper exports.

Zambia is now committed to the congested Chinese-built Tazara line to Dar es Salaam, while Zaire uses the lengthy southern route to South Africa, via Zambia and Rhodesia, and its own laborious (voile nationale) rail-river route to Matadi.

## OVERSEAS NEWS

## India's feuding Cabinet close to a compromise

BY K. K. SHARMA

NEW DELHI, August 17.

AN UNEASY compromise appeared today to have been reached between the feuding factions of the ruling Janata Party and its principal leaders. The party crisis began about two months ago when Mr. Charan Singh and Mr. Raj Narain resigned as Home Minister and Health Minister, respectively, after criticising Mr. Morarji Desai, the Prime Minister.

After prolonged mediation efforts by a number of Janata leaders it was agreed at an emergency cabinet meeting this morning that Mr. Charan Singh should be asked to become President of the Janata Party in place of the present incumbent, Mr. Chandra Shekhar. Mr. Charan Singh is expected to be installed in the post on September 3.

In return, Mr. Charan Singh and Mr. Raj Narain have agreed not to make statements to parliament on their resignation from the Cabinet. They had threatened to make further charges against Mr. Desai's son, Kanti, who is already under a cloud for alleged corruption and

for making use of his father's office for his own purposes. Mr. Desai is thought to be distinctly unhappy over the compromise since it gives Mr. Charan Singh a key party post which he can use to criticise the government. If the talks over on September 3, he will be party president shortly before party elections are to be held for the first time in October and thus gains important leverage. It is now likely that his Bharatiya Lok Dal (BLD) faction in combination with the Jana Sangh group will dominate the Janata Party.

This has caused considerable dismay among other groups, notably people formerly belonging to the Congress. These include Mr. Jagjivan Ram, the Defence Minister, Mr. H. N. Bahuguna, the Petroleum Minister, and Mr. Desai himself. Mr. Chandra Shekhar, who is to step down as the Janata President, is also a former member of the Congress. In view of the unpopularity of these important members over the settlement, it is thought that the compromise will be temporary and it is on

the cards that factional quarrels will break-out again. Mr. Desai is thought to have accepted the compromise to avoid bringing further charges against his son into the open. He has said frequently that he will not deal with Mr. Charan Singh unless the latter withdrew charges he has levelled against Mr. Kanti Desai. No charge has been withdrawn and, in fact, the Janata's General Secretary, Mr. Madhu Limaye, has resigned because Mr. Desai has not acceded to the demand that his son should not live in the Prime Minister's house.

The issue of the charges against Mr. Desai's son is, however, far from over. Mr. Desai last week suffered a major defeat when the upper house of parliament, the Rajya Sabha, adopted a motion asking the Government to appoint a commission of inquiry to investigate the charges or allow a parliamentary committee to do so. The matter was raised in the House again today and a government spokesman told the chairman that he would let him know the Cabinet decision on the motion soon.

## Rhodesian call for all-party conference

By Our Own Correspondent SALISBURY, August 17.

SENATOR Chief Jeremiah Rhodesia, a member of Rhodesia's ruling four-man executive council, tonight came out in open support of new all-party peace talks with guerrilla leaders.

Chief Chirau, the most conservative of the three moderate black leaders joined with Prime Minister Ian Smith in Rhodesia's transitional Government, declared that the majority of the country's 6.5m blacks and 260,000 whites wanted the Administration to attend all-party talks.

Britain and the U.S. have been making intensive diplomatic efforts for the past two months to get the transitional Government round the conference table with Patriotic Front guerrilla leaders Mr. Joshua Nkomo and Mr. Robert Mugabe.

Chief Chirau's statement is the first positive indication that the Salisbury leaders will drop their resistance to new settlement talks.

Mr. Smith is known to have been resigned for more than a month to the prospect of attending the Western-sponsored talks in the face of mounting military and economic pressure.

The transitional Government's firm agreement to new talks has reportedly been held up by the reluctance of the other two black leaders, Bishop Abel Muzorewa and the Rev. Ndabaningi Sithole.

The two feel considerably more confident of popular support and appear anxious to attempt universal franchise elections scheduled for early December in terms of the Salisbury agreement.

Chief Chirau's statement is seen as reflecting Salisbury's current harsh realities—that universal franchise elections will be virtually impossible with 7,000 guerrillas operating throughout the country, and that the Government is ready to infiltrate to smash any attempt to get blacks to the polls.

Michael Holman writes in Lusaka: Mr. Robert Mugabe tonight called on Britain to convene the proposed all-party summit in terms of its membership of Rhodesia's interim Administration refused to attend.

## Mideast bid 'a high risk' for Carter

By David Buchan WASHINGTON, August 17.

PRESIDENT CARTER today acknowledged that he was running "a high risk" politically in calling the Camp David summit between Prime Minister Menachem Begin of Israel and President Anwar Sadat of Egypt next month, and if it fails "I will have to share part of the blame."

But he said the stakes were high, with one result of failure being a possible new conflict in the Middle East. The U.S. was, he said, not just "a non-interested party or message carrier" in the dispute.

The President said he had had no assurances from either side of the two Middle East leaders of a fundamental change in their positions. But the Administration, which would be a full partner in the Camp David talks, would help both parties explore their differences and ways of bridging them.

The Camp David meeting comes at a crucial time for Mr. Carter's domestic political fortunes—on the eve of the autumn Congressional election campaign.

L. Daniel writes in Tel Aviv: Letters of protest have been sent by the "Peace Now" movement to Israeli Government leaders following the disclosure that wives and children of settlers in two military camps in the West Bank are about to join the menfolk.

While the camps are not new settlements, "Peace Now" feels that the transfer of families there amounts to an infringement of the spirit of the agreement to suspend all settlement activity before the Camp David meeting.

## Coup attempt thwarted in Afghanistan

RAWALPINDI, August 17.

AFGHANISTAN'S rulers have thwarted a plot to overthrow the new Government and arrested the Defence Minister and chief of Army staff, Kabul radio said tonight.

Defence Minister Abdul Khadir, a former Air Force officer, spearheaded a bloody coup on April 27 which ousted President Mohammad Daoud and brought in the new Government.

Kabul radio, monitored in Rawalpindi, said the plot was foiled when the Government of President Nour Mohammad Taraki checked the subversive activities of "some dishonest persons."

The chief of Army staff, Major General Shahpur, and the head of a Kabul hospital, Dr. Mir Ali Akbar, were also arrested, the radio said.

Kabul radio did not say how many people had been arrested following the discovery of the plot to overthrow the Government. But it said President Taraki assumed the Defence Ministry.

## THE NEPALESE OPPOSITION

## Murmurs of discontent in the land of the Sherpas

BY A SPECIAL CORRESPONDENT, RECENTLY IN KATHMANDU

THE royal crown in the ostensibly tranquil land of Sherpas, a second crucial operation. Then two weeks ago, word of trouble brought Koirala rushing to New Delhi, but not to Kathmandu since the Government's appeal against its own tribunal's acquittal guarantees his fourth arrest. The King is said to be considering M. P. Koirala, B.P.'s half-brother, previously prime minister in 1951 and openly the King's man, as the next prime minister. Several prominent party members are making moves

quickly flew back to the U.S. for spread of democracy in the region. Nepal plays a careful balancing game with its two huge neighbours. Relations with China are strong with a large aid programme, though observers see this feudal monarchy and its massive Communist neighbour as very strange bed fellows. Some speculate that China might secretly back the Naxalite violence or the local Communist Party if either gained any substantial strength or following. Yet China would seriously hesitate before giving India the vaguest justification to storm into Nepal's defence and gain closer access to China's Tibetan border.

A measure of communist strength revealed itself after the July 2 death in India of Pushpa Lal Shrestha, the exiled Communist Party leader. His ashes were greeted on arrival in Kathmandu by a huge, illegal rally.

Meanwhile, whatever the fate of the various opposition parties, villagers are beginning to voice their protests. During spring elections, when three-quarters of the votes were declared "invalid because of voters' ignorance in using pens to mark ballots," enraged villagers who believed their candidate was kidnapped attacked armed policemen with bamboo sticks. At least five were shot dead and many wounded. Later, in the Siraha district, villagers rallied round a police outpost in support of two alleged Naxalite prisoners. All were savagely beaten and several women raped when police reinforcements arrived.

Inside the Government, corruption and bureaucratic ineptitude are rife. Though a dedicated elite of highly competent and intelligent young men, hand-picked by their 31-year-old King, is struggling with the mammoth task of development, civil servants beneath them fear to make decisions and are often simply not competent.

Much whispered bitterness focuses on the Royal Family which owns the lion's share of Kathmandu's hotels, travel agencies, single casino and many major industries. But the Royal Family's imperious business dealings are beyond open criticism.

When a British newspaper recently mentioned the Royal cut of 40 per cent from the casino, its Korean manager was given 48 hours to leave the country as punishment for confiding in the press.

Nepal's aristocracy is unlikely to sacrifice its feudal privileges to Birendra's reforms willingly. The economic battles will not be easily or quickly conquered nor the currents of protest quelled.

Neither Birendra or his Government can please all the powerful factions involved. It may be easier to meet the Nepali Congress Party pleas for reconciliation and multi-party democracy than eventually face far more potent opposition from the communist front.

Nepal is one of the poorest countries (LDCs) on the UN's list and especially his strong list. The annual national per capita income is \$110, but in the father of India's Janata remote hill areas it is less than that. Janata has made no secret \$30 and dropping. The economy of its support of the Nepalese is growing at 3.2 per cent a year, but the population is increasing at

## New image of Yugoslavia is being promoted in China

BY DAVID HOUSEGO

CANTON, August 17.

A WIDESPREAD campaign has been under way in China to rehabilitate the image of Yugoslavia, one of the three East European countries Chairman Hua Kuo-feng will visit on his present trip, and once considered a renegade socialist state.

"We are going to improve our management and we think that some of the ideas of Yugoslavia may be suitable," said Wu Shieh-yien, a senior official at the Kwangtung silk factory, before showing the round. The plant is about 15 miles from Canton, weaves silk mostly for export and is a showpiece project.

The Yugoslavian ideas to which Miss Wu was referring were the encouragement of profits for reinvestment and incentive bonuses to achieve higher output, although Miss Wu did not phrase it quite as bluntly as this.

In recent months there has been increasing evidence that senior party cadres throughout the country have been briefed on Yugoslavia's methods of "self-management" for running state enterprises and that the Tito of Yugoslavia, during his state visit here last September,

been impressed by the successes of the Yugoslav economy. Self-management, under the Yugoslav system, means considerable autonomy for an individual plant and participation by the workers in key decisions on prices, production and investment in which they have an interest through the distribution of higher profits.

Foreign observers in Peking disagree on the significance of this "learning from Yugoslavia." The Yugoslavs were ostracised by other Communist parties in 1948 for such doctrinal heresies as espousing self-management. The bad name has lingered in the minds of many Chinese party officials.

The present campaign, therefore, may be nothing more than an attempt by the Chinese leadership to erase its impression at a time when China is looking to Yugoslavia—as to Romania—as a key element in its high profile foreign policy of countering what it considers Russian imperialism.

The Chinese made the gesture of allowing President Tito of Yugoslavia, during his state visit here last September,

to be the first foreigner to enter Chairman Mao's mausoleum. Since then, delegations have passed back and forth and, most important of all, the two Communist parties have established strong fraternal links.

Some foreign observers believe, however, that the combination of party directives from Peking about the Yugoslav system and the visit of Chairman Hua to Belgrade point to the type of socialism in which the new Chinese leadership is interested. Specifically, they see the Chinese leaders, worried about their inability to get their workers to work, turning to Yugoslavia's pattern of self-management as the model on which to base running of their own state enterprises.

This still seems a far-fetched interpretation. It took Yugoslavia almost 15 years to make self-management work. The Chinese are only just switching away from an unsuccessful system of revolutionary committees managing an enterprise to placing full responsibility on the shoulders of a director whose task it will be to secure higher efficiency and output.

## Frelimo ousts party chiefs

By Our Foreign Staff

NOZAMBIQUE'S RULING Frelimo Party has expelled a Cabinet Minister and three central committee members, Maputo radio—monitored in London—reported yesterday.

The central committee had noted serious cases of deviation, indiscipline and corruption which violated Frelimo's revolutionary ideology, the radio said.

It said Agriculture Minister Joaquim Carvalhal had been expelled because his view of development went against the advance towards socialism as laid down by the party.

## Palestinian chiefs to meet

BY HSAN HIJAZI

BEIRUT, August 17.

PALESTINIAN guerrilla leaders are to hold an important meeting in Damascus next Tuesday to discuss proposals for Palestinian unity.

The talks will be within the framework of the Palestine Central Council (PCC), the 65 member party making body of the Palestine Liberation Organization.

Al-Fatah, the main organisation, has completed a unity plan which it intends to bring before the PCC. It was announced. Five other groups forming the "Resistance Front" two months ago called for the establishment of a new leadership of the heads of all the guerrilla factions.

In a note to Fatah, they complained of what they called Fatah's dominance.

Fatah leaders have been in contact with the "rejectionists" to discuss unity ideas.

Fatah had also been in touch with the pro-Israeli Palestine Liberation Front (PLF). The talks preceded the big explosion last Saturday night which destroyed a nine-storey building where both Fatah and the PLF had maintained offices.

Guerrilla leaders have dismissed speculation that the incident was part of the feud between Palestinian factions. The PLO has blamed U.S. and Israeli intelligence agents.

This announcement appears as a matter of record only.

## Firestone negotiates over radial tyre recall

By John Wyles

NEW YORK, August 17

THE U.S. National Highway Traffic Safety Administration is expected to decide "within a month" whether Firestone Tire and Rubber should be forced to recall all the 13m "500" steel-belted, radial tyres thought still to be in use.

However, the issue of an order may be delayed by a negotiated settlement between Firestone and the U.S. government.

Firestone has hired Mr. Clark Clifford, a leading Washington lawyer, and the agency confirmed today that Mr. Clifford had met Safety Administration lawyers "on a couple of occasions".

The agency would not confirm that negotiations on a possible settlement were under way, but said that a final decision on the recall issue should be made in the next month.

Firestone admitted for the first time two weeks ago that controversy over alleged safety defects of the "500" was affecting earnings from sales of it. These took place in the lower third fiscal year than last.

But the company's lawyers have indicated that it would consider publishing more widely its earlier offers to make free safety checks for customers. The "500" tyre was manufactured by Firestone between 1972 and early this year.

The Safety Administration having determined that the "500" has a safety defect, it would be surprising if it did not order a recall. Estimates of the cost to Firestone of supplying alternatives to the tyres range from \$150m to \$500m. With the public controversy hitting its earnings and its share price, the company's apparent desire for a negotiated settlement is understandable.

## Argentina and Chile break off territory talks

BUENOS AIRES, August 17

ARGENTINA and Chile have unexpectedly broken off talks on their disputes over territory near the southern tip of South America.

The latest round of talks ended here yesterday, two days ahead of schedule, when the Chilean delegation left suddenly for home.

Argentine sources said that the departure was not a walk-out.

The Argentines said the talks were to resume within the next two weeks. But in Santiago, Foreign Ministry sources said that the Chilean delegation had left because the Argentine side was making unacceptable proposals.

Delegations from the two countries have been meeting periodically since May to try to settle conflicting territorial claims which were not resolved by arbitration last year which ruled that the islands in the Beagle Channel near Cape Horn should belong to Chile. The disputed area is potentially rich in oil and fish.

## Carter protects spending on NATO, vetoes Bill

BY DAVID BUCHAN

WASHINGTON, August 17

PRESIDENT CARTER today vetoed the \$28.9bn Bill to authorise the procurement of weapons next year, because Congress made heavy cuts in his high-priority programme for NATO order to pay for a fifth, nuclear-powered aircraft-carrier which the administration does not want.

Mr. Carter, who had only until the end of today to act, vetoed the Bill which would automatically have become law, said that he would cooperate with Congress to prepare a better Bill which would not waste our national defence dollars.

The President, announcing what is his third veto this year to a news conference, said, "It is a question of money, but of how that money is spent." He objected in particular to the \$300m cuts in proposed spending on army weapons and equipment, much of them affecting U.S. forces in Europe, to the \$200m cut in air force weapons; reductions in funds for weapon research and development, and to the \$500m cuts in programmes

to improve military readiness. This last programme he described as "unfathomable but necessary." It is a part of the big U.S. commitment to his NATO allies, made at the summit in Washington in May of alliance leaders, to reduce the time in which U.S. reinforcements can be deployed in Europe. As such, the president's veto today is likely to be welcomed by NATO allies.

The Carter administration has provided the main push behind NATO's recent pledges to improve its readiness for combat and capability to reinforce along with a 3 per cent annual increase in defence spending. The president evidently felt that Congress was undermining this.

Mr. Carter also attacked the inclusion in the authorisation Bill, which does not cover nuclear weapons, of some \$2bn for a fifth, nuclear-powered aircraft-carrier. He said this would be the most expensive ship ever built. Also, aircraft to put on it and ships to protect it would cost billions more in years to come. The president, who was a proponent of a

nuclear-powered navy when he served in a nuclear submarine, said today that the navy was moving towards being a force with a disturbingly small number of ships which were increasingly costly.

The administration, some members of Congress, and even a few senior navy officers, argued that big nuclear carriers present too expensive a target to the increasing numbers of Soviet anti-ship missiles.

Mr. Carter rejected reporters' suggestions that he had made the fifth veto in his presidency to show that he meant to get tough with Congress. He also said no reason why the veto should complicate further the chances for progress of other legislation, such as that on energy.

He said that the issue of the fifth nuclear carrier (three are already in service and a fourth is under construction), which would not be completed until 1987 had no relevance to energy legislation, which was an immediate problem.

## Blumenthal seeks tax support

BY OUR OWN CORRESPONDENT

WASHINGTON, August 17

THE U.S. Treasury Secretary, Mr. Michael Blumenthal today took the fight for the Carter Administration's tax cut proposals to the Senate, and urged the Finance Committee there to provide more tax concessions for middle and lower income earners.

Last week, the House of Representatives passed a \$16.3bn tax relief Bill which is strongly opposed by the Administration because too much of the benefit would go to individuals earning more than \$50,000 a year and to holders of capital gains.

Mr. Blumenthal said he had no quarrel with the overall size of the House tax cut. "It is within a reasonable range of tax cuts that will maintain growth without increasing inflation," he told the Senate Finance Committee.

The Administration has in any case scaled down its request for a tax cut from \$25bn to \$20bn, while at the same time asking Congress to trim a further \$500m of public spending next year to bring the 1979 deficit down to \$43.5bn.

He also said the House Bill's split between \$10.4bn in personal tax relief and \$5.9bn in business tax reductions is "acceptable" to the Administration. "But we do not like the distribution of the cuts among taxpayers," he said.

Specifically, he said the share of total individual tax cuts going to those earning below \$30,000 a year should be increased from 25 per cent (as in the House Bill) to 40 per cent, while the share for those earning more than \$50,000 a year should be reduced

from 24 per cent to 10-15 per cent.

The Treasury secretary cited an opinion poll of last month showing that Americans opposed the gradual phasing out of the three most pressing problems—behind inflation and crime—and that tax "reform" was more generally equated with tax fairness than with tax reduction.

The secretary argued that any tax cut substantially larger than that passed by the House would create serious inflationary pressures.

"Whatever temporary benefits might be obtained through lower tax burdens would be quickly negated by the resulting rise in prices and interest rates. In addition, tax incentives for business investment and job creation would be undermined."

## NY newspaper talks collapse

BY OUR OWN CORRESPONDENT

NEW YORK, August 17

TALKS AIMED at ending the strike, which is now in its ninth day, which has closed down the main New York City newspapers, ended in confusion last night without progress having been made over the last three days.

The Pressmen's Union, whose members have struck at the three newspapers over a manning issue, apparently halted the negotiations last night when a management proposal failed to materialise. The union had been led to expect an initiative from the publishers by a Federal mediator who, according to one source, later admitted that he had misunderstood.

Although the publishers expect talks to resume next week, the union is predicting an early settlement and, with advertising volume low in August as usual, there are worse times of the year for newspapers to face a strike.

Both sides, however, are anxious to avoid a repetition of the 11-day strike in 1952-53 which was the last time the subsequent demise of four daily newspapers. Of those affected in the present dispute, the New York Times and the Daily News are profitable, but the afternoon paper, the New York Post, is not. A spokesman for the Post, which is owned by Mr. Rupert Murdoch's News International, said today that the paper was probably losing less than \$1m a day.

Although strenuous efforts are being made to reach potential customers, owners of theatres and department stores are worrying about the impact of the strike on their businesses. Their concern was echoed yesterday by Governor Hugh Carey of New York, who urged the President's plan to consider the effect of the strike on "basic business."

The publishers say that union negotiators have as yet shown no readiness to accept the principle of reduced manning which is at the heart of the dispute.

is now pending methods have reduced the newspapers' manning requirements by about 50 per cent, and the publishers are seeking to achieve reduction in a new three-year contract to succeed one which expired at the end of March.

## Nitrites in meat danger

BY OUR OWN CORRESPONDENT WASHINGTON, August 17

THE U.S. Agriculture Department and the Food and Drug Administration have drawn up a plan to ban the use of nitrites as a meat preservative in the \$10bn worth of cooked meats which are consumed every year in the U.S.

The plan, which would force great changes in the U.S. meat industry, and may have repercussions abroad, is still being discussed within the administration. It follows a study, released last week, by the Massachusetts Institute of Technology which

showed that nitrites in large doses cause cancer in animals.

One dilemma connected with a ban on nitrites is that the compounds are widely used to prevent botulism, a virulent food poison, and to allow meat products to be shipped and stored without constant refrigeration. The government plan provides for the gradual phasing out of nitrites (no timetable has yet been set), and for discussions with the meat industry on alternative methods of handling and storage.

## Canadian spending cuts

OTTAWA, August 17

THE CANADIAN Treasury Board President, Mr. Robert Andras, said today that the government will trim \$2.5bn from its current and planned spending over the next two years.

He told a news conference that the cabinet has already decided on \$1.5bn of spending cuts and additional reductions "of at least

\$1bn" will be announced in coming weeks.

Mr. Andras said that the government's decision beyond the commitment given by the Prime Minister, Mr. Pierre Trudeau, in a speech on August 1 when he said that \$2.5bn would be cut from spending.

Reuters

## W. Germany reduces Arab oil purchases

By Jonathan Carr

BONN, August 17

WEST GERMANY markedly reduced its dependence on imported oil from Arab states in the first half of this year, thanks partly to higher deliveries from Britain and Norway.

This emerges from figures released here today by the Economics Ministry. They also show Germany achieving an overall surplus of DM 1.2bn with the Arab world in the January-June period, a trade markedly down from a deficit of the same period of 1977. German imports from Arab countries were down by 23.4 per cent to DM 6.5bn and exports down by 5.7 per cent to DM 7.7bn.

West German oil imports totalled 43.8m tonnes in the first half—8.1 per cent lower than the figure for January-June 1977. Of that total 25.4m tonnes came from Arab states, a reduction of 18.3 per cent against a year earlier, and 18.4m tonnes came from other oil producing states (including Iran), a rise of 10.2 per cent.

This means that Arab countries this year are supplying 58 per cent of West Germany's oil import needs against 65.1 per cent last year. Other states are delivering 41.9 per cent of imports against 34.9 per cent before.

The Arab countries experiencing the biggest cuts in oil exports (by quantity) to West Germany include Libya (down by 25.5 per cent to 7.6m tonnes), Saudi Arabia (by 29.5 per cent to 6.7m tonnes), and the United Arab Emirates (by 15.4 per cent to 3.3m tonnes).

Among the non-Arab states, Iran exported 1.2 per cent less (6m tonnes) to West Germany in the first half than it did in the same period of 1977. Nonetheless, it moves up to first place as this country's biggest single source of imported oil, displacing Libya.

The big gainers among the non-Arab oil suppliers include Britain which exported 2.8m tonnes of oil to West Germany in the first half against 1.5m a year earlier—an increase of nearly 87 per cent.

This means Britain accounts for 6.4 per cent of German oil imports, up from 3.1 per cent a year before. Norway also doubled its oil exports to West Germany to 1.2m tonnes in the same period of comparison.

## Hitch for Ericsson in Brazil

By Sue Branford

SAO PAULO, August 17

A LAST-MINUTE hitch is endangering L. M. Ericsson's chances of winning a \$40m contract to supply 50,000 lines for an ex-street SPC (storage programme controlled) telephone exchange to be installed in the city of Sao Paulo.

Earlier in the year, Ericsson's Brazilian subsidiary was placed first in the bidding held by Telebras, the state-owned telephone company. But an eleventh-hour obstacle has arisen, following the acquisition by the Swedish Skandia Insurance Company of a 25 per cent stake in Atlantica Boa Vista, a company in the Bradesco group, which in turn controls Atlantica Cia. Nacional de Seguros, Ericsson's Brazilian partner.

These complex financial arrangements appear to have overlooked legislation passed in 1968 which regulates the activities of insurance companies in Brazil.

A report is being prepared by the agency which supervises private insurance and it is widely believed here that, fearful of creating a precedent, the Government will decide against Ericsson on this issue.

An Ericsson spokesman in Stockholm admitted that a slight hitch had arisen but said the contract was expected to be signed soon. If necessary, he said, Ericsson would find another partner.

## Push on mining equipment

By John Lloyd

BRITISH mining equipment manufacturers, whose exports have been rising steadily, are to combine forces in a new organisation aimed at further boosting their export share.

The two existing organisations, the Association of British Mining Equipment Exporters and the Council of Underground Mining Machinery Manufacturers, which deals with domestic trade, have been merged to form the Association of British Mining Equipment Companies.

The new association is in part the result of pressure from Sir Derek Ezra, the chairman of the National Coal Board, who has consistently argued the virtues of a more aggressive export drive. He said yesterday that the new organisation would strengthen the UK's chances of increasing the "export earnings of its mining expertise and equipment, both of which are among the best in the world."

The chairman of the new association, Mr. Dennis Morgan of Dowty Meco, said that the opportunities exist for effective leadership in mining development in the UK coal industry and for promoting an increasing British share of the growing world market for mining equipment.

## Japanese car exports will be 'substantially down'

BY ROBERT WOOD

TOKYO, August 17

JAPANESE car exports will be "down substantially" in August and September due to the higher yen. Mr. Takashi Ishihara, president of Nissan Motors, said today.

Cars and video tape recorders have been the major Japanese products whose sales have continued to increase rapidly in the face of the higher yen over the last year. Recently the Government has been "guiding" the car makers to limit their exports, but Mr. Ishihara said the Government guidance has become superfluous, as Japanese car sales have begun to decrease of their own accord due to the price increases forced by the higher yen.

The price of a typical Japanese car has risen by at least \$1,000 in the U.S. over the last year.

Mr. Ishihara spoke at the introduction of a new model of the company's "Z" car, the sporty

compact that has achieved such spectacular success in the U.S. Sales target for the car is 10,000 a month, with an expected sales distribution indicating about a 10 per cent rise in U.S. sales and more than a doubling of sales in the domestic and non-U.S. foreign markets.

Mr. Ishihara said Nissan did not expect a serious threat from the Mazda RX-7, recently introduced with spectacular success by Toyo Kogyo, a smaller Japanese car manufacturer. The RX-7 is several thousand dollars cheaper than the Nissan Z car. Mr. Ishihara said the RX-7 was "in a class altogether different" from the Z car in equipment and finish.

He said Nissan expects to achieve its target of 2.4m car sales this year.

Domestic prices on the new model are up ¥48,000 to ¥148m (¥7,700), over the price of the old model. The prices of the new version in overseas markets were

not announced. The old version now sells for \$10,525 in the U.S. Sales target for the car is 10,000 a month, with an expected sales distribution indicating about a 10 per cent rise in U.S. sales and more than a doubling of sales in the domestic and non-U.S. foreign markets.

Mr. Ishihara said Nissan did not expect a serious threat from the Mazda RX-7, recently introduced with spectacular success by Toyo Kogyo, a smaller Japanese car manufacturer. ## Shipments to Soviets rise 10%

BY DAVID SATTER

MOSCOW, August 17

JAPANESE EXPORTS to the Soviet Union rose 10 per cent during the first half of this year reversing the decline in exports recorded in 1977, according to figures released by the Japanese Embassy.

Japan is the Soviet Union's second largest trading partner after West Germany and a partial breakdown of the figures

by the Japanese indicates that last year's decline in exports was caused by a sharp drop in Soviet purchases of Japanese iron and steel products.

That drop in Japanese exports came against a background of successive 30 per cent increases in Japanese exports to the USSR in the years 1974 through 1977.

The outlook for this year is

for Japanese exports and total trade to increase modestly over last year's levels but Japan, like Western countries, is being hurt by the across the board reduction in Soviet purchases from industrial capitalist countries.

In the first half of this year, Japanese exports had totalled \$1,130m, a rise, an increase over the \$1,038m in exports for the comparable period last year. The increase was attributable to significant rises in machinery and equipment sales together with chemicals exports.

The value of Japanese imports from the Soviet Union for the first half of this year was \$708m, a slight decline from the value of imports in the same period last year, which was \$717m.

Japan's principal purchases from the Soviet Union are wool, raw cotton, non-ferrous metals and coal.

Total trade turnover during the first half of 1978 was \$1,896m, a 5.5 per cent increase over the turnover in the first half of 1977 which was \$1,790m.

According to Japanese figures trade for the whole year of 1977 fell 2 per cent from the level reached in 1976 to \$3,360m from \$3,420m in the preceding year.

## Polyester plant contract

BY OUR MOSCOW CORRESPONDENT

TORAY INDUSTRIES and Mitsui of Japan have signed a \$38m contract with the Technaship-Import foreign trade organisation for a polyester fibre plant with a capacity of 5,000 tonnes of yarn per year.

The plant will be built at a polyester complex—Mogilev—and is scheduled to be in operation by the end of 1980. Production will range from the high speed manufacture of polyester filament to the making of drawn textured yarns, using techniques developed by Toray.

Meanwhile, shipments are expected to begin in October on

a \$38m contract signed by Japan's Asahi Chemical with Technaship-Import for the construction of three benzene plants. Two of the three plants are to produce 12,000 tonnes a year and will be located in Kazan, U.S.S.R.

The contract was signed in December and the deal arranged by Nishio-Iwai Company, a Japanese trading house.

Mitsui Engineering and Shipbuilding and several other Japanese machine builders will supply machinery and equipment. Asahi Engineering, a subsidiary of Asahi Chemical, will carry out the engineering work.

## Record for UK wool textiles

BY RHYS DAVID

BRITAIN'S WOOL textile

exports reached a record £41m in June, more than £5m up on the figure for May of this year, and for June 1977, according to figures published by the industry in Bradford.

The increase means that after a relatively slow start in export markets this year the industry has for the first time pulled ahead of its 1977 export levels with total sales of £204.8m in the first six months, against £200m in the same period last year.

The big increase so far this year has come in overseas sales of wool cloth, which at £83.8m in the first six months were 22 per cent more than in January-June 1977, more than compensated for a decline in exports of other products such as yarn and raw wool.

The increase in cloth volumes was around 5 per cent with the Middle East and the Far East showing the main gains, and a worsted cloth performing better

than woolen. Sales of worsted in the Middle East in the first half rose from 1.6m square metres to 3.7m square metres and in the Far East there was a rise from 1.5m square metres to 2.2m square metres.

In Western Europe sales of woolen cloth declined from 6.7m square metres to 5.7m square metres and in worsted cloth there was a drop from 3.04m square metres to 2.5m square metres. Sales to North America, Australia and New Zealand also declined overall. But the state trading countries, which have been increasing their penetration of the British market over recent years, were better customers, the quantities purchased are still small.

Other figures published by the industry show that the higher export sales were achieved at a time when overall production was continuing to decline as a result of the general slack conditions in textile markets.

Imports of various wool textile products are at the same time continuing to increase their share of the UK market with different suppliers concentrating in different product areas. Imports of wool tops (combed) in the first six months were up 155 per cent over the same period of 1977 with South Africa accounting for 0.76m kilos out of the total of 1.9m kilos.

In woolen yarn imports were up 21 per cent to 3.2m kilos with Ireland accounting for 2.5m kilos, an increase of 12 per cent.

However, the most persistent problem as far as the industry is concerned, however, is the continuing pressure which is being exerted on the woolen fabric sector by the Prato district of Italy. Total imports of woolen fabrics at 12.6m sq metres were up 71 per cent, of which Italy accounted for 8.7m sq metres an increase of 82 per cent.

A delegation from the industry has recently visited ministers in Whitehall to see if further action can be taken through the ECC to persuade the Italians to abide by undertakings to restrain their growth in their exports. The industry has yet to receive a reply, however, to its representations.

## Israeli clothing sales

BY L. DANIEL

TEL AVIV, August 17

DESPITE the adverse conditions on world markets, Israeli exports of fashion wear, including furs and leatherware, rose by 13.2 per cent in the first half of this year.

Just under 60 per cent of the total sales went to the European Community, and 18.3 per cent to the U.S. Exports to Europe are expected to increase further as buyers representing large French stores are coming to Israeli

(Spring/Summer 1979) fashion week for the first time this year. The week will take place at the Jerusalem Hilton from August 21-24. The French buyers will be part of 300 overseas buyers who have registered for the event.

It is expected that Israel's total sales of fashion wear which also includes some men's clothing, will reach \$15m this year compared with \$15.5m in 1977.

## China transshipment deal

TOKYO, August 17

KAWASAKI STEEL Corporation said it was agreed to permit two Brazilian iron ore mining companies to use its cargo handling and storage facilities in the Philippines and Japan as transshipment bases for exports to China.

Officials at Kawasaki said Brazil's Cia Vale do Rio Doce (CYRD) has contracted with China National Metals and Minerals Import-Export Corporation to supply 250,000 tons of iron ore for October-December shipment.

CYRD will use the loading, unloading and storage facilities on Mindanao of the Philippine Sinter Corporation, a wholly owned subsidiary of Kawasaki, in shipping the ore to China.

Another Brazilian mining company, Mineracao Brasileira Reunidas (MBR), has also contracted to ship 150,000 tons of lump ore to China in November. MBR will use the Kawasaki facilities in Mizushima, western Japan for transshipments by smaller ore carriers to China.

Officials said China is attempting to import iron ore and other materials to develop its own steel industry from many different sources on a tripartite basis.

Meanwhile, Nippon Steel officials said they are co-operating informally with Broken Hill Proprietary, the only integrated Australian steelmaker with a mining division, in efforts to sell iron ore to China.

Nippon Steel itself is the major contractor for a major new steel complex to be built in China near Shanghai. China has plans to more than double its steelmaking capacity to 60m tonnes a year by the year 1995.

## Aqaba cold store award

BY RAMI G. KHOURI

AMMAN, August 17

SUMITOMO SHOGI KAISHA of Zuma Corporation chairman, Mr. Japan has won a \$7m contract to provide and install a cold store for the free zone at the southern port city of Aqaba. The store will have a capacity of 6,000 tons and is expected to be completed by the end of October as a centre for transit trade and next year, according to Free transport.

The awarding of the contract is seen locally as a firm indication of Jordan's drive to use its central geographical location in the Middle East to promote itself as a centre for transit trade and next year, according to Free transport.

## India to buy more fertiliser

By K. K. Sharma

NEW DELHI, August 17

THE INDIAN Government has formulated plans to import 1.9m tonnes of fertiliser nutrients this year to fill the gap created by heavy demand and inadequate production. Demand has risen because an unusually good monsoon makes crop prospects extremely bright and heavy imports have become necessary despite higher utilisation of indigenous capacity.

Even though substantial new capacity for fertiliser production has been created, the Government has decided also to maintain a buffer stock of 1.9m tonnes of nitrogenous fertiliser.

A review of fertiliser consumption in the country shows that while there was a marginal increase in imports of nitrogen in 1977-78 over the previous year, imports of phosphates increased by seven times while potash fertiliser imports doubled, thereby showing an overall increase in fertiliser imports of 45 per cent.

Italy's state-controlled chemicals group, Anic, is to supply China with \$18m worth of fertilisers and synthetic rubber by the end of this year, the chemical group announced in Milan.

## CHILEAN ECONOMY

## Copper-bottomed optimism

BY ROBERT LINDLEY, RECENTLY IN SANTIAGO

# If you run a smaller business

...why not use the Midland as your own business team?

Anyone who owns a small business knows that success depends on hard work and business acumen.

But success means expansion. And, to expand, all businesses—small or large—need the same thing.

**FINANCE.**

So maybe you should be thinking of borrowing the money you need to achieve the expansion you want.

Which brings us to the loan facilities available at Midland Bank.

**Teamwork is lending you the finance you need.**

The manager of your local Midland Bank can introduce you to a business team who are particularly well-versed at working with small businesses—even one-man companies.

They can offer such obvious solutions as term loans to set up manufacturing plant, or overdraft facilities to build stocks fast when early success looks promising.

But it's the breadth of business know-how that makes your Midland Bank business team valuable—especially before you have developed a team of your own.

You'll find we are a bank that's prepared to sit down with our smaller business customers, and think.

Your local Midland manager will be glad to tell you about the service he and his colleagues in Midland Bank Group provide. Their special skills range from finance for growing companies to pension schemes for the directors themselves. For full information about using the Midland as your own business team, send this coupon, or ask for a copy of our booklet at your local Midland branch.

Please send your free booklet, "Financial Services for Proprietors of the Smaller Business."

## HOME NEWS

## Consumer spending at £9bn record

BY DAVID FREUD

CONSUMER spending was at an all-time high in the second quarter of this year.

The peak was confirmed in figures yesterday by the Central Statistical Office, although there was a slight reduction in the initial estimate last month.

The revised figures put the total of consumer spending in the second quarter at £9.08bn (at 1970 prices and seasonally adjusted). This is £15m less than the first estimate and is only £16m above the total for the first quarter.

The growth reflects the sharp rise in disposable income, which has increased by about 7 per cent in the 12 months to mid-year.

In the first half of the year, consumer spending was 2.6 per cent above the level of the previous half, and about 4.6 per cent above the same period last year.

Expenditure on food, alcoholic drink and tobacco fell back from the high level of the first quarter, down £37m from £2.8bn. There was a slight drop in spending on cars and motorcycles.

Expenditure on most other services and retail goods increased over the two quarters.

The increase in retail sales in July, combined with tax rebates paid in that month, make it likely that expenditure is rising after the second quarter pause.

This interpretation is supported by figures today in the official magazine *Trade and Industry* which show that stocks held by retailers in June were at record levels.

In June the ratio of stocks in sales (seasonally adjusted) stood at 109 up from 103 in February and significantly higher than the average of 107.4 in the peak year of 1973.

## Successful quarter for life companies

By Eric Short

LIFE COMPANIES are having a successful year in attracting new savings, according to figures released yesterday by The Life Offices' Association, the Associated Scottish Life Offices and the Industrial Life Offices Association.

The figures for the second quarter of the year, showed that total new annual premiums on individual assurances and annuities rose by 17 per cent on the quarter from £50m to £58m — a level 27 per cent higher than in the corresponding period last year.

Personal pension business also rose, with new annual premiums 42 per cent higher on the quarter, at £27m.

Single premium business was also strong over the period, totalling £147m in the second quarter compared with £130m in the first quarter and £130m in the second quarter of last year.

The net result over the first half of this year showed total new annual premiums of £250m, compared with £214m last year, while single premium business totalled £277m against £229m.

Linked life assurance bond business has maintained the strength shown in the first quarter and is now back at the level of sales in the boom years of the early 1970s.

Single premiums in the second quarter rose to £78.5m from £72.5m in the first quarter, bringing sales in the first six months to £48m — 49 per cent up on the first half of last year.

However, sales of personal pensions contracts for the self-employed on unit-linked basis showed a decline in the period on both annual and single premiums.

This was in complete contrast to sales of traditional with-profits personal pensions policies which moved ahead strongly.

## Avis sells

AVIS Rent a Car has opened a centre at Dudley Road, Wolverhampton, to sell to the public low-mileage, vetted cars retired from its self-drive and leasing operations after less than a year's service.

## Public sector pensions inquiry urged

BY DAVID FREUD

A THOROUGH inquiry into the funding of public sector pensions was called for yesterday by the Commons' Public Accounts Committee.

The present haphazard mixture of approaches could represent a large area for economies in public expenditure, Mr. Edward du Cann, chairman of the committee, said yesterday.

He said fully-funded pension schemes in the public sector were very expensive. The British Rail scheme, which the committee had specifically investigated, would require public funds of more than £1bn between actuarial deficit.

When the funded schemes—in which independent capital is built up to cover pension requirements—were necessary for private companies, this was not the case for public concerns.

Normal actuarial considerations do not apply where the State stands behind a concern. Mr. Hugh Jenkins, Labour MP for Pinner and a member of the committee, said the funds were reaching an unmanageable size and there was no control over them by the Government.

Referring to the British Rail fund's policy of buying works of art, he said he doubted whether

it was the Government's intention that a trust should set itself up as a competitor of the Arts Council.

The public sector funded schemes are mainly operated by the nationalised industries, while civil servants' pensions are usually met through a pay-as-you-go system with no advance provision to meet liabilities.

Mr. du Cann said the committee intended to see that the cost and implications of all the options were properly examined.

The Wilson committee on financial institutions is now investigating pension funds and received evidence from the Treasury on Wednesday warning against a switch towards pay-as-you-go.

Mr. Douglas Lovelock, chairman of the Commons' Public Accounts Committee, said the committee had been in operation for 120 years, is costing the Exchequer up to £7m a year.

The practice arises out of the duty-free allowance for test sampling up to one tenth of a gallon—or 0.2 per cent—out of each 48-gallon cask of spirit in bonded warehouses.

The committee report said the system was being abused because

when the sample was not wholly consumed in the test, it was sometimes resold with duty-paid spirits.

The committee was told by Mr. Douglas Lovelock, chairman of the Customs and Excise, that the samples totalled about 250,000 gallons a year, on which full duty would amount to £7m. Although the lost revenue was significantly below this figure.

The Scotch Whisky Association denied that the practice was an abuse.

Smith report from the Committee of Public Accounts, Session 1977-78, Stationery Office Price 25.

## Duty-free whisky curb

THE Customs and Excise Department is taking steps to end an arrangement which allows distillers to sell a fraction of their whisky duty-free.

According to the Commons' Public Accounts Committee report, the trade practice, which has been in operation for 120 years, is costing the Exchequer up to £7m a year.

The practice arises out of the duty-free allowance for test sampling up to one tenth of a gallon—or 0.2 per cent—out of each 48-gallon cask of spirit in bonded warehouses.

The committee report said the system was being abused because

## Euro-loan guarantee scheme to offset redundancies

BY MICHAEL CASSELL

DETAILS of a loan scheme to create new employment for redundant workers in the coal and steel industries were released yesterday by the Department of Industry.

The scheme will enable companies investing in projects in development and special development areas to take full advantage of foreign currency loans available from the European Coal and Steel Community.

Loans for such projects are available at favourable fixed rates of interest and the effect of the new scheme is to provide companies with a guarantee against the risk of exchange losses.

When the exchange guarantee scheme for loans from the European Investment Bank was announced in December, it was made clear that loans from the Community for employment-creating projects in areas affected by the decline of coal and steel could in principle also be considered for exchange risk cover.

Yesterday's announcement reflects agreement with the Commission on the detailed operation of a scheme to provide exchange cover on such loans.

The Community lends up to 40 per cent of the fixed capital cost of qualifying projects and loans are subject to a minimum size limit of about £750,000 and linked to employment creation.

The rate made in foreign currencies and it is expected that the average rate of interest will be 7 per cent. A charge of 1 per cent will be made for the exchange risk guarantee.

The scheme is to run initially for a limited period until the end of this year but all loans taken up during this time will be covered for their duration.

Loans up to £500,000 will continue to be available through the Industrial and Commercial Finance Corporation under its existing loan arrangement with the Community.

## Mortgages average £10,000

FINANCIAL TIMES REPORTER

THE AVERAGE building society advance made during the second quarter of this year stood at just over £10,000, according to figures published yesterday by the Department of the Environment.

The results of a 5 per cent sample of building society home loans completed between April and the end of June show that the average mortgage of just over £10,000 was £400 higher than in the first quarter of 1978 and compared with a figure of only £8,500 a year earlier.

According to the Department, the average house price on which loans were arranged during the second quarter was £14,578 against £14,252 in the previous three months and £12,332 a year before.

Between April and June, 47 per cent of all loans went to new owner occupiers against 48 per cent in the preceding quarter and just under 50 per cent in the same period of last year.

The Department says that, for the 213,000 loans completed during the second quarter, the average percentage advance against purchase price was just over 67 per cent, a repeat of the previous three months but 31 per cent up on a year before.

In the second quarter, borrowers purchased homes with an average price of 2.8 times their recorded income and obtained advances on average of 1.8 times their income.

Information directly through the system.

TOPIC is expected to build up to a total of 1,200 or so terminals, compared with the 2,000 on the present service. This will involve three new mini-computers at a cost of £380,000 apiece.

The two systems will operate in tandem for at least four years.

It is expected that the basic TOPIC hire charge for an initial terminal will be 50 per cent higher than the £1,000 charged for the first Market Price Display Service terminal.

## Crown contests SUITs verdict

By Ray Peman, Scottish Correspondent

THE CROWN is to appeal against the verdicts reached last month on Sir Hugh Fraser, deputy chairman of Scottish and Universal Investments (SUITS) and other present and former directors of the company.

Sir Hugh, Mr. William Forgie and Mr. Angus Grossart were found guilty of failing to give a true and fair view of the affairs of SUITS on a charge under the Companies Act which arose out of the misclassification of a £42m loan in the 1975 report and accounts. They were all fined.

The Sheriff at Glasgow rejected the Crown's assertion that the offence was committed wilfully, and it is on this point that Mr. John Skeen, the Procurator Fiscal, is appealing.

Under the 1945 Act the penalty for wilful commission can be imprisonment.

Mr. Grossart's acquittal on a separate charge of failing to notify share dealings to the company within the required period is also being contested by the prosecution.

The appeals will be heard at the High Court in Edinburgh at the same time as appeals lodged on behalf of Sir Hugh and Mr. Forgie. Hearings are unlikely for some months.

Mr. Grossart's acquittal on a separate charge of failing to notify share dealings to the company within the required period is also being contested by the prosecution.

MRS. ANDREA Mullaney, 22, (above) has been voted Britain's top secretary by the London Chamber of Commerce and Industry. She won the £100 prize first place in the Chamber's diploma examination for private secretaries.

Mrs. Mullaney, aged 22, of Ripley, Derbyshire, has been a private secretary for only a year. She has shorthand and typing speeds of 120 and 75 words a minute and speaks

French, German and Italian. She hopes to go on to work in personnel management.

Her boss, Mr. Chris Stevens, works manager of wire manufacturers Johnson and Nephew says she is the best secretary he has ever met.

"I am terrified now that, after winning this title, she will be lured away from me," he said yesterday.

"I have nightmares about it. Good secretaries are difficult to find and she is perfect."

## Sheffield cutlery industry prolongs rift over imports

BY RHYS DAVID

THE Federation of British Cutlery Manufacturers yesterday rejected proposals from the rival Cutlery and Silverware Association for a meeting involving chief executives of the top ten companies.

The recently-established federation—which is headed by Mr. John Price of Arthur Price, Sheffield and Birmingham cutlery—has been campaigning strongly for a phased introduction of import controls, eventually bringing the top limit down to 25 per cent.

However, this is regarded as unrealistic by the association which favours the introduction of a 50 per cent quota for a five-year period.

The federation in rejecting the cutlery and silverware association's approach, which was aimed at working out a common policy, is claiming that such a meeting would not properly cover the industry.

Instead, Mr. Price repeated his call yesterday for a direct meeting between the two trade bodies, and the aim is to have the new place with major retailers about shops trading by Christmas, 1980.

More than 250,000 sq ft will be added to the town's main shopping thoroughfare, doubling the size of the highly successful first stage. More than 1,000 jobs should be created.

Announcing the go-ahead, Telford Development Corporation also disclosed yesterday that

90 per cent of all the stainless steel cutlery sold in Britain.

This leaves the UK industry largely dependent on more expensive up-market products.

Mr. Price, whose federation has claimed that the association has been too soft in tackling the problem of imports, partly because some of its members are a number of companies extensively engaged in importing.

Another point of conflict is the practice by some companies of silver-plating blanks made in Sheffield, and marking them "Sheffield".

The industry has managed to come together with other interested bodies, including Sheffield City Council, to lobby the Government for aid and for action through the EEC to limit imports. But moves are likely to be delayed until a report commissioned from the Cutlery and Allied Trades Research Association has been completed.

At the heart of the dispute is the industry's rapid contraction over recent years in the face of strong pressure from imports of which no waccout for more than

more than 200 inquiries had been given for an early start to the £6m second phase of Telford, Salop, town centre.

Contractors should be on site at the beginning of September and the aim is to have the new place with major retailers about shops trading by Christmas, 1980.

The 1979 Financial Times diary shows a number of improvements over the 1978 Financial Times diary.

Firstly, design.

We commissioned James Shurmer, who has produced work for the National Gallery, to completely revise the interior styling.

He provided us with a nicely understated thin-line treatment of the main diary, together with a matching design for the information sections.

Secondly, it occurred to us that there were insufficient months in the year.

Hence the 1979 FT diary starts on November 27th, 1978, and finishes on February 3rd, 1980.

So you can slip into 1979 whenever it suits you.

We've also extended the business information section. It gives a comprehensive list of useful information sources in thirty countries of the world.

You can trace anything from a Belgian consumers' association to a Polish translation agency.

On the subject of translation, the diary also contains a French and German business vocabulary covering everything from 'cash' to 'collateral'.

It could help make letters from abroad a lot easier to understand.

Next, we thought we'd put an end to writer's cramp.

To save you having to copy out hundreds of addresses and telephone numbers at the end of each year, we've incorporated a detachable address booklet.

Now, on the assumption that you do a fair bit of travelling, we've listed the passport, visa and vaccination requirements of all major countries, along with world time-zones and air-travel distances. There is also a superb 48-page colour atlas.

Statistics, we thought, were vital.

In the 1979 FT diary you'll find an 18 page section containing analysis charts, monthly expense sheets, weights and measures, metric conversion tables, both metric and imperial graphs, and international clothing sizes.

Finally, we decided that no-one wants a marker-ribbon that falls to bits, so we've attached a non-fraying marker ribbon.

In addition to the desk diary, there's a slim pocket diary and wallet, in black leather, with strengthened corners and real gold lettering.

It contains a colour map of the City of London, tube and inter-city maps, a list of recommended hotels and restaurants, information on road, rail and air travel in Europe, calendars, world

time zones and metric conversion tables.

We've also designed an attractive matching address book.

If required, the desk diary, pocket diary and address book can all be gold-blocked with either your initials or company name and logo.

So you can give either yourself, your staff or your best clients a personalised gift.

Which will add a very nice perspective to any desk top.

# We'd like to correct a few illusions about our business

Putting a tiger in motorists' tanks is still an important part of our business. But it accounts for only 20% of our total production. So how is the rest sliced up?

Think of vast furnaces spewing out white hot metal, or steam held under immense pressure in huge boilers, or the heat source for hundreds of kinds of process work, and you have the biggest part of Esso's production - fuel oil.

Fuel oil is the fuel that keeps industry going. It is also the fuel that produces some of Britain's electricity. In fact the biggest single user of fuel oil is a power station, converting 2 million tons of fuel oil a year into electrical power.

Fuel oil is used to drive ships such as the QE2 and 500,000 ton Supertankers, and to heat large buildings like hospitals and museums.

Fuel oil is efficient, versatile and accounts for nearly double the volume of petrol.

## Kerosines

Another versatile fuel used for both heating and for transport is the paraffin-type fuel known in the oil industry as kerosine. Home heating needs a light, highly refined oil for portable heaters and domestic boilers. And kerosine is the answer.

Other forms of kerosine, refined in different ways, are turbo-jet fuel for aircraft and the kerosine used to drive the gas turbines of ships. The Hovercraft and many of the Royal Navy's fast pursuit vessels are typical examples.

Through our underground pipeline from Fawley refinery near Southampton to Heathrow, we can pump up to half a million gallons of aviation jet fuel a day. We currently supply a quarter of

the total volume of fuel used by airlines in Britain.

Fuel consumption in aircraft is heavy. A Boeing 747 jumbo jet uses 24,000 gallons on a single Atlantic crossing.

## Diesel fuels

Trains and trucks by comparison are economical in their use of fuel. For example, the 125 mph High Speed Train running between Kings Cross and Newcastle, uses only 1.3 gallons per mile.

If diesels are the work-horses which carry passengers or freight by train, truck, taxi or bus, diesel fuel is the work-horse fuel.

Last year Esso supplied London Transport buses with a quarter of their diesel fuel, and half the engine fuel used by British Rail.

Unlike some European

countries, Britain has never been very interested in diesel cars. Even in Germany where diesel fuel is cheaper than petrol diesel cars only represent 4-8% of the car population.

However, diesel fuel has a large off-road volume. Tractors and other agricultural vehicles, and contractors' plant such as excavators and dumpers are big users. Off-road diesel represents about two thirds the volume of diesel for normal road use.

The biggest diesel engines of all are in ships. One such diesel, with cylinders a man can stand upright in, produces as much power as 600 Maxis.

## Lubricants

Without exception where you use fuel you also use lubricants.

This is where real expertise is needed, for it not only requires skill to produce the lubricant, it requires skill in using the right oil and in using it economically.

How easy it would be for everybody if there was just one lubricant that could do every job.

The fact is different applications require different properties in the oil.

A jet flying at 40,000 feet has an engine oil temperature of 250°C, while the elevators, ailerons, and rudder require lubricating at -40°C.

To meet the wide range of uses Esso make more than 600 kinds of oil to do everything from lubricating the backs of pigs to lubricating the rollers on which bridges pivot.

## Speciality products

In this category are bitumen, used for surfacing roads, airport runways, and race tracks (Silverstone was recently resurfaced with Esso bitumen); chemical feedstocks from which polythene, nylon, antifreeze, synthetic rubber and a host of other products are made; and LPG (Liquefied Petroleum Gas), used in lighters and camping stoves, and among many other industrial uses for processing aluminium and for heating tile and pottery kilns.

That is how our tiger is sliced. We would like to talk to you, so if you are interested in learning more about any part of our business, please call our Marketing Bureau on 01-834 6677, Extension 3207.

## A FINANCIAL TIMES SURVEY

## VENDING

November 9 1978

The Financial Times proposes to publish a Survey on Vending. The provisional synopsis is set out below.

**INTRODUCTION** One of the big growth industries of the 1960s, vending in this country failed to maintain the momentum which had seemed to be setting the UK on the same route as the U.S. But something of a quiet revival appears to have been taking place.

**CATERING** Britons bought more than 3bn drinks from machines last year. What have been the main developments in this important sector of the business?

**GENERAL RETAILING** American fishermen bought 3.5m worms from slot machines in 1977. The fully automatic shop is already a reality. Where does automated retailing go from here?

**TECHNICAL DEVELOPMENTS** Electronic coin counters, hot can vending machines, and small machines dispensing drinks for the office with only a handful of people have been among some of the more interesting innovations of recent years.

**THE COMPANIES** American influence remains strong, not surprisingly in view of the U.S.'s pre-eminent place in the vending market. Who are the machine manufacturers and operators?

**THE PRODUCTS** Making products for sale in machines is an industry in itself, especially in the food business.

For details of advertising rates in this Survey please contact: Peter Highland  
Financial Times, Bracken House  
10 Cannon Street, London EC4P 4BY

## The shipping industry's plans to improve life on the ocean wave

BY NICK GARNETT

A NEW report, suggesting major changes in the way the UK shipping industry organises its manpower is due to be issued to shipping companies and the unions within the next few weeks.

The report is the work of the Sealife Programme, a joint union-management investigation into manpower planning, set up amidst severe staffing difficulties confronting the shipping companies.

Shipowners in the 1960's and early 70's were faced with a major problem—how to retain seamen and ship's officers. There was no recruiting difficulty but too many seafarers, particularly senior officers were quitting, not only to go in higher paid shipping jobs abroad but also to other industries.

Given that it costs about £12,000 simply to train a ship's master or senior engineer, the drain on manpower was having an adverse financial effect. Beyond that it was preventing the companies making the most efficient use of their employees.

It was a mark of the seriousness with which the industry viewed the problem that a small group of shipping companies, normally jealous of their own independence, came together in 1974 to seek a solution.

The result was the setting up of Sealife in March 1975 as a joint venture between the shipping companies, the five sea unions, and the Department of Trade. The General Council of British Shipping, by means of a cash levy on its member companies, has been almost the sole source of funds, providing about £1m. up to the end of next year.

The programme, under an executive committee and a general council, which has the support of the representatives from all three sides before ratifying policy decisions, could do little about the outflow of officers who were simply seeking extra money with foreign flag companies. It was empowered, however, to study ways in which the life of ratings and officers in UK shipping could be made more attractive. It was on the basis of this that the companies hoped better man management, productivity and profits could be developed.

The programme's team recognised the difficulties facing it.

A navigating cadet receiving instruction in using sextants from the second officer aboard a giant tanker.

Despite a welter of technological changes, some traditions are still deeply rooted in the industry. There would also be some conflicts between owners and the unions, and on some matters of shipboard life between different unions or between grades of seamen.

Nevertheless the programme has been trying to steer the industry towards some targets it believes should be met if shipping is to improve efficiency and job satisfaction. It is now on the point of proposing firm proposals to the General Council and the unions on how they should go about it.

The team has focused much of its work on three features of the industry which it believes are hampering attempts to sort out manning difficulties. These are the continued existence of the "pool" system of labour, the tradition of viewing ship complements as temporary communities, and the sometimes unhappy relationship between officers and shore management. In addition there is a larger category of difficulties related to training, career development for ratings and officers, and the peculiar nature of shipboard life.

British shipping, in line with that of most other countries, operates a labour pool system. Only a third of able seamen (qualified trained deck ratings) are on regular contracts with

particular shipping companies. A third have long-term though informal arrangements. The remaining 30 to 40 per cent are in the labour pool.

A much higher proportion of officers are regular employees of individual companies—about 85 per cent—but that still leaves about one in six drawn from the pool.

Although the pool system is dying, its continued existence is recognised by most shipping lines and many seafarers as a stumbling block to improving the general standard of officers and seamen and promoting a closer relationship between the individual company and its seamen on which better productivity can be based.

For one thing, the pool system tends to dry up during the summer and Christmas periods although the number of men needed by the companies remains fairly constant. Companies are forced to take what is available, and this has meant trawling for seamen from southern Europe and elsewhere, where standards are generally lower.

The operation of the system also militates against attempts to improve commitment from officers and ratings to the particular companies they work for.

Some of the Sealife team believe the quality of pool ratings and some of the 15 per

cent non-contract officers is lower now than it used to be. Associated with this is the industry's own relatively entrenched attitude that, apart from most senior ships' officers, ship crews are simply a collection of individuals brought together for a relatively short period to work on one or two voyages before being disbanded.

A lot of seamen however appreciate the flexibility, in not being tied to particular companies, that the pool affords them. Shipowners, for their part have been worried about the cost of operating a labour system without the pool. In straight employment terms, it is more costly to man ships with crew members on stable contract because companies pay out far more for idle time and seafarers' travelling costs.

A growing tendency for shipowners to overmanage ships from the shore is a development which the Sealife programme sees as a real problem for companies' manning policies. Partly because of improved world wide communications and tighter financial control from management, some of the jobs normally carried out by officers have been whittled away.

Sealife has also been looking at the deficiencies in training, career structure and seaboard life. A central problem has been a poor career structure for ratings and the lack of retraining geared to shore employment, particularly for officers. At the same time, the programme has been studying some of the basics of ship life, including ways of improving accommodation and working space.

The programme's main theme has been to try to show shipping companies that in the long term, stable crewing, through better productivity based on improved commitment from ratings and officers, should be a prime goal for companies and unions.

It has been proposing that companies institute shore and ship training geared to producing career ladders. For deck ratings it has been trying to sell the idea of a wider entry range, with men streamed towards particular kinds of duties from the outset to improve job enjoyment.

Beyond that Sealife members are known to support the basic principle of single entry for officers and ratings as a way of boosting career prospects and breaking down some of the tightening demarcation between the two. Thirty years ago about a fifth of merchant navy officers came from the lower ratings, but today it is down to about 2 per cent.

Some new group training schemes, involving a number of small companies, have been initiated with the help of Sealife. There are two project ships where crew participation in a ship's day-to-day running is being studied, and a group of five companies have been meeting to analyse ways of changing working methods ashore and aboard ship.

Sealife is pressing for shipping and ship design companies to extend consultations to the unions on ship design and has organised a number of "design workshops" where all sides of the industry have been trying to reach agreement on guidelines for future ship development.

Despite the present shipping slump, the industry still faces a general shortage of able seamen and some companies a shortage of good, experienced officers. If the industry begins expanding again as it is expected to do in the next decade, the Sealife team hopes it will have learnt some lessons on the way its 100,000 employees can best meet the challenge.

## A source of energy that will last for 300 years.

At the present rate of production, Britain has proved coal reserves which will last at least 300 years.

This puts Britain's Coal Industry in a strong position alongside strictly limited oil and gas supplies, and the continuing development of nuclear power. With this assured energy supply, based on coal, British Industry can plan ahead with confidence.

## The benefits of being the EEC's biggest coal producer.

Britain already has the biggest mining industry in the Community, producing as much coal as the rest of the EEC put together. To replace Britain's present coal output with imported oil would worsen Britain's balance of payments by £5,000m a year. This makes coal good for Britain as a whole.

## Vast modernisation programme.

To ensure that these huge reserves are available when needed the NCB, under its "Plan for Coal", is already investing heavily in developing new collieries and in expanding existing pits.

We are still proving coal reserves in Britain four times as fast as we are using them. Selby, the biggest new coal project, will produce 10 million tons of coal a year. This and other new mines are keeping British coal-mining in the forefront of mining technology.

## Ever heard of a fluidised bed?

Britain is also taking a lead in the technology of using coal. Fluidised bed combustion is a new method of burning coal in industrial plant. These boilers should cost less than conventional plant and need less space. This method, in which coal is burnt in a bed of ash

or sand and which is 'fluidised' by passing air through it, offers substantial advantages to those considering new industrial boiler plant.

## New ways to keep coal on the move.

There have also been spectacular advances in coal and ash handling techniques. For example, compressed air is now being used to push coal through a pipeline from bunker to boiler and ash from boiler to storage silo. The system is completely enclosed and dust free, silent running, needs little maintenance and is cheap and simple to install.

## Problem-solving is our business.

Coal benefits all sorts of customers. With District Heating, coal fired plant supplies heating and hot water to whole communities. Individual users, from the biggest power station to quite small industrial plants and individual homes, can benefit from the new knowledge and equipment on coal burning.

There's an enormous amount of know-how concentrated in the NCB Technical Service, covering all aspects of the efficient use of steam and hot water heating. If you need advice on making the best use of your existing plant, information on new equipment and techniques, how much new equipment costs and what savings it can give, ask the NCB or your Industrial Fuel Distributor. Expert help is available.

The NCB has a new brochure which tells what coal has to offer you now and in the future. There are also new technical booklets dealing in more detail with all designs of industrial coal-fired boiler houses.

If you would like copies, or would like a technical expert to talk over your heating needs, write to National Coal Board, Marketing Dept., Hobart House, Grosvenor Place, London SW1X 7AE, or ring 01-235 2020.

Doing Britain and British Industry a power of good.

# Management

EDITED BY CHRISTOPHER LORENZ

## Putting soccer's finances on a more professional footing

"THE ATTITUDE to finance in the world of professional football has been changing in the last few years. The soccer world is interested almost exclusively in success on the pitch. The lack of cost-consciousness comes as a surprise to say the least."

The words are Richard Moore's and he should know. A chartered accountant, and at 43 managing director of his successful £5m family knitwear business, Cox Moore, he has also held the uncomfortable job of finance director at Derby County Football Club for the past four years.

Few other soccer clubs may boast a chartered accountant on their board, but in other respects Mr. Moore represents a new breed of young men who are trying to instil financial management in football with some of the techniques now used in commerce and industry.

"When the first board meeting I ever attended at Derby came to discuss finances, the chairman called for a financial report and the secretary simply read out the current bank balance," he says. "We then passed on to the next item on the agenda. Cash flow was unheard of."

a field he pioneered in British football. He has also tightened the reins on costs by introducing a form of budgetary planning and control in spite of the scepticism of many of the club's staff. But he has been disappointed at the inability to introduce a sophisticated system of the sort now common in industry.

"Cash flow planning, in particular, is damned difficult," he says. It is not a run of bad weather, nor an unexpectedly rapid elimination from a cup competition (both of which cut revenue below expectations) which "always makes up" cash

The danger of buying a few expensive players, rather than spreading the risk across a greater number of less obvious stars — an alternative policy generally followed by last season's cup-winners Ipswich Town, for example — is underlined by Derby's balance sheet.

Having won the League Championship in 1972, and again in 1975, Derby's finances were in an apparently healthy condition. But the bubble burst with frightening suddenness. Within two years, the club had slumped to 15th place in the First Division, though last

player. Although payment was on an instalment system, special dispensation had to be secured from the club's bank, National Westminster.

The logic behind the move was clearly expressed at the time by Tommy Docherty himself. "This is a lot of money for a club with only 20,000 gates (spectators per game), but we would be getting a natural scorer, an entertainer and a character — just the type to attract the Derby public."

The purchase completely threw out Mr. Moore's budget. But he still says "it would be wrong to try to control managers more. They are the experts of the only commodity a club has to sell — its football. The manager's task is to dedicate himself to achieving success on the field. Inevitably that means he has to commit its financial resources to that end."

Underlining the dilemma of any club's directors, he says that if the team is successful "then the crowds will arrive in their thousands to provide more cash with which to buy more players to preserve the success. But when things are going wrong, when attendances fall and success flies out of the window, spending can be the only hope in an attempt to get it back."

In such circumstances, "the Board really has to back the manager — or sack him. Maybe this is why soccer managers have such a high casualty rate."

Capping all these uncertainties is the way most managers are appointed. Again, the contrast with industry is complete. If we appoint a senior executive at Cox Moore, we can carefully collect his career data, make discreet trade inquiries, and examine his record," says Richard Moore. "It is much more tricky in football, because each job is different, and it is very difficult to make discreet inquiries because of the publicity problems. Yet what guarantee do the directors have that an appointment will be successful?"

Not every outsider to the emotional world of football would agree with Mr. Moore that "it would be wrong to try and control managers more." Is there any essential difference

### As Derby County's shareholders gather for today's AGM, its finance director talks to Christopher Lorenz.

flow, but the buying and selling of players. This can occur almost without warning for all sorts of reasons: a player is injured and needs replacing, or the club manager suddenly hears of an opportunity to buy a star player, and has to move fast to get him before another club

Like any prudent businessman, Mr. Moore would never allow his factory manager to go out and buy £100,000 of new machinery at the drop of a hat. "We would have expert advice in front of us, and would know the return we could get from such an outlay. We could estimate what the machine would produce and give us back during its working life, assuming we could sell its production."

"There is no guarantee on a £250,000 footballer! He could break a leg in his first game, or prove an expensive flop."

Mr. Moore knows the problems from bitter experience. "Two expensive purchases at Derby which did not work out for us before the present manager arrived, have subsequently been allowed to go with a resultant loss of over £300,000 within two years," he says.

### Dividends

It is not only most Board members who are overridingly preoccupied with success on the field. Derby has many shareholders, but they receive no dividends. Mr. Moore recalls one AGM "where the shareholders were more concerned that we were displaying the League Championship Trophy than criticising the accounts, which were not as healthy as some of us would have liked."

"It is this sort of attitude which has led to the situation where the 92 Football League clubs are a staggering £14.5m in the red," says Mr. Moore.

Since his arrival on the Derby Board, Mr. Moore has encouraged the generation of new sources of revenue, especially through sponsorship.

Richard Moore: bringing hard-nosed commercial expertise into the emotional world of football.

## How Hammersmith is attracting new industry

NO LAND, no powers, and no money. Such were the problems facing Jack Stopforth, Industrial Development Officer for the London Borough of Hammersmith, when his unit was created.

Less than two years later, his team has identified 60 acres for industrial development in the near future, with an employment potential of up to 3,000 people; he is confident there will be no difficulty in letting the space.

Soon he will be leaving to face the even greater challenge of a similar job on Merseyside.

Much of the land has been found by persuading British Rail and British Gas to release unused or under-utilised sites, while new powers and finance have become available with Hammersmith's enhanced status, first as a "programme area" and most recently as a beneficiary of the Inner Urban Areas Act.

The borough's problems, of job loss, social deprivation, housing shortage and industrial decay are common symptoms of Britain's declining inner city areas.

In spite of the council's readiness to create Mr. Stopforth's post, his first main task was to re-educate its councillors, as well as some of its officers.

There was a widespread fear that emphasis on industrial development would mean sacrificing housing and environmental objectives, and that industrial decline in inner cities was in some way an inevitable result of regional policy. Mr. Stopforth set about changing these attitudes by argument and demonstration.

The results of a survey of local firms showed, among other things, that many of the smaller industrial units were built before the First World War, that council policies — and in particular a strategic plan for the Fulham Reach area on the Thames, designating it a housing area — had deterred investment, and that because of the borough's excellent transport facilities there was a real and unmet demand for small factory and warehouse units.

In council the "housing lobby" was overcome. Mr. Stopforth, further considering his first victory the resignation of Fulham Reach as an industrial area. This, he claims, had the immediate result of saving over 100 jobs in a Duckhams factory which had previously been threatened with closure.

Having proved the demand for new industrial units Hammersmith could at this stage have opted for a highly interventionist policy, building new nursery units. Instead, while not opposing such methods in principle, the council decided on the less risky, and it is claimed, more efficient policy of encouraging private investment.

### Liabilities

British Rail and subsequently British Gas were approached at Board level and undertook to release packages of land, some times lacking access for redevelopment. In this way Hammersmith saw itself as turning liabilities into assets.

The Hythe Road area, near Wormwood Scrubs, undoubtedly the Hammersmith/ British Rail showpiece. Using Government finance, the council authorised the clearing and levelling of this near-five-acre site. By the end of 1979 it is hoped there will be a range of small factory units and warehousing there.

In other areas Hammersmith has acted as a catalyst. For example, Marks and Spencer is at present undertaking a major 250,000 square foot warehouse construction in the centre of the borough which will provide 250 jobs and supply the company's Marble Arch store. Hammersmith's role was simply to introduce developer to land owner, and speed through the planning application.

By virtue of its existing policy and achievements, Hammersmith must be well placed to take advantage of the new Inner Urban Areas Act, which will give some boroughs new powers to give loans and grants for expansion, and to designate industrial development areas.

### INSTRUMENTS

#### Measurement of colour

ABLE to operate as a stand-alone unit or as a remote probe, the equipment is a DEC 11/03 with a Dewetrite solving terminal, a spectrophotometer system by Applied Colour Systems of Princeton, New Jersey, is being offered and supported in the UK by BOC Automation of Daventry.

Its purpose is to provide high-speed, high resolution measurement for the paint, textile, ink and plastics industries.

The equipment is built around the ACS Spectro-Sensor photometer (also available from BOC) and includes processing and control to allow it to operate as a unit, or it can be connected to a main computer, combining with existing ACS-500 or ACS-600 systems. In this way, performance is maintained whether the work is done at a centre or over a terminal.

When it is operating as a

remote unit, the equipment runs off a DEC 11/03 with a Dewetrite solving terminal, a spectrophotometer system by Applied Colour Systems of Princeton, New Jersey, is being offered and supported in the UK by BOC Automation of Daventry.

System performance includes reflectance and transmittance measurements with better than plus or minus 0.2 FMCI colour difference unit repeatability, and selectable data output.

High accuracy is achieved by taking 100 discrete measurements across the visible spectrum.

The sensor has scanning speeds of 2 to 4 seconds — 4 seconds average — and has photo-cell monitoring of lamp intensity for direct feedback adjustment.

BOC Automation is on Daventry (03272 5026).

#### Two-purpose tester

MEASURING pH values between 0 and 14 pH, 6000 series temperature compensation is automatic and there is the additional facility of direct temperature measurement over the range of minus 50 to 150 degrees C.

The Model 6060 has a resolution of 0.1 pH and its temperature compensation range is 0 to 100 degrees C. For the basically similar Model 6060 the figures are 0.01 pH and 0 to 50 degrees C.

Both models are supplied complete with a choice of two standard probe sets; Set A is suitable for pH measurement in liquids, while Set B is for pH measurement in semi-solids such as soils, and solid foodstuffs such as meat, cheese, etc. In addition an extra rugged

temperature probe is available for forcible insertion into more resistant materials e.g. frozen meat carcasses.

The instrument is powered by internal 9V 1600 (manganese) alkaline cells giving 35 hours of continuous or 50 hours intermittent use. Battery life is greatly extended by the 3-position switch giving a 'momentary' facility which means that the instrument need be switched on only for the instant a reading is required. Type AA rechargeable cells are offered as an optional extra and a 60 mA charged for use on 240 V AC mains is then provided.

Havant Instruments, Unit 3, 20 Portsmouth Road, West Basingstoke, Hants. RG24 0BN.

### PROCESSING

#### Big kiln will cook the chromate

AIDING IN the achievement of what is described as a great advance in the production and processing of sodium dichromate, at least so far as European industry is concerned, the Mechanical Equipment Division of Head Wrightson Teesdale, is to supply and set up a very large rotary kiln for British Chrome and Chemicals at Uxley Brook, Cleveland.

Worth something close on £1.5m, the kiln will be about 300

feet in length and weigh 1,400 tons. It will be fabricated and transported to site in five sections and then aligned and erected on four roller support stations.

Rotational drive is by twin pinion gear and it will be controlled by thyristor-based equipment.

Design of the kiln will incorporate certain special features dictated by the process and it is to be built in collaboration with Vulcan Ironworks Ltd of Wilkes, Pennsylvania, U.S.

#### Separation of minerals

NORTON-HARTY Colliery Engineering is to undertake the development of an improved system of froth flotation for cleaning fine coal. The National Research Development Corporation (NRDC) will be providing a major share of the cost during the first part of this £100,000 project. It is proposed that a full-size unit will be installed in 1979 in a UK coal washery on a test basis and, if the development is successful, the company will manufacture and sell commercial plants for coal treatment in the UK and overseas.

The work has extensive potential applications in processing of important metallic minerals.

Froth flotation is widely applied to the enrichment of minerals throughout the world and enables gangue or waste to be removed from the more valuable fractions. A suspension of the fine solids, mixed with a frothing agent, is aerated so that the bubbles carry the valuable mineral into the froth, while the gangue or other mineral species sink.

The process is mainly used in the UK for the removal of clay from fine coal fractions in coal washeries. The fine coal rising in the froth must be filtered before blending with the larger coal fractions, but the residual clay content from the conventional flotation cell hinders the speed and efficiency of this costly filtration.

Development by Norton-Harty and NRDC uses a layout devised by Mr. C. C. Dell of the University of Leeds that allows several stages of froth cleaning to be mounted one above another in a compact unit, thereby reducing the clay content to a low level in a single process, without the need for additional banks of flotation cells. It is expected that the improved efficiency of the fine coal will enable useful capital savings to be achieved in ancillary filtration equipment.

Further applications are expected to arise in the separation of copper, lead and zinc. These ores are already subjected to several separate stages of flotation, which could, in future, be replaced by this single flotation system, with savings in capital and running costs.

Details of coal mining applications from Norton-Harty, Central Works, Market Place, Great Bridge, Sandwell, West Midlands DY7 7AT, 021-657 8931. For other areas of mining, Dr. M. Rendell, Industrial Chemistry Group, NRDC, Kingsgate House, 66, Victoria Street, London SW1E 6SL, 01-838 3400.

#### Ions help kill bacteria

ELECTRONIC air conditioning equipment that kills bacteria and is expected to have a revolutionary effect on food preservation requirements, has been introduced by Benta of Switzerland.

It takes into account the electrostatic and biological content of the air as well as temperature and humidity. Applications in Europe are in restaurants, hotels, food processing plants, and food stores.

In cool rooms, the Benta system reduces the bacteria count by 90 per cent when

operating at a temperature of 2 degrees C and 90 per cent humidity, thereby reducing excessive weight loss in meat and eliminating discoloration.

The equipment can be installed in a few hours and works automatically by creating ionisation in the drawn air. This kills bacteria and so reduces the count that operation above freezing point is perfectly feasible.

Data on the equipment is available on 01-852 7527 at Merit House, Edgware Road, Colindale, London NW9.

### DATA PROCESSING

#### Sainsbury's progress

GOOD RESULTS are being achieved with the checkout system installed at Sainsbury's Hypermarket in Washington New Town. The store, jointly owned by Sainsbury and British Home Stores, opened last November and was probably the first to operate the most advanced in-store hypermarket computer system in the U.K.

This is an NCR 25 installation based on two computer processors controlling 38 check-outs, disc drives, visual display units and a printer.

Several thousand lines are entered into the check-out terminals by code rather than by price, permitting stock, profit, and re-order control at store level. A comprehensive financial package is also operated, including the payment of all suppliers' invoices. The customer

receipt which is produced has the facility to give clear descriptions of each item purchased.

The system does not at present use scanning techniques to capture sales data, but is capable of being upgraded if required when enough products carry the article numbering codes.

Sainsbury is studying the application of computerised check-outs in supermarkets. There is still a lot of progress to be made in developing an appropriate system and the company is evaluating a number of approaches with different manufacturers. As part of the development and evaluation process, a team has recently been sent to the United States to study systems in operation there.

J. Sainsbury, Stamford House, Stamford Road, London, SE1 8LL. 01-921 6266.

#### More data on the disc

PERTEC has released in Britain its PD680 double-headed flexible disc drive capable of recording at and reading data on both sides of a standard 8 in. discette.

The two-sided drive is capable of both single and double-density operation giving an on-line storage capacity of 800K or 1.6 Megabytes.

PD680 is compatible with IBM diskettes 2 and 3D (or equivalent) and its electrical interface is compatible with the current proposed ANSI standard (i.e. the current de facto industry standard interface).

Each drive has a die-cast construction with flexible drive with disc drive capable of recording at and reading data on both sides of a standard 8 in. discette.

Track-to-track access time is 3 msec, with head load time of 3 msec and track setting time of 15 msec. Head positioning is achieved by a steel band attached to the head carriage and to a drive pulley on the shaft of a four-phase permanent magnet stepper motor, each step of the motor causing the head to move 0.5 track.

Perterc, 10, Portman Road, Reading, Berks. (0734) 582115.

#### Key to network at NPL

COMPUTING SERVICES UNIT at the National Physical Laboratory in Teddington has taken delivery of a GEC 4070 system to be used primarily for logging and reduction of experimental data.

It will receive data from terminals and computers on NPL's data communication network, which incorporates 200 terminals and processors of six different makes. To make the connection, Coral and Fortran IV.

NPL has developed an interface to BS4421 which will plug directly into the standard GEC 4000 digital input/output board. NPL is also writing the communications software to enable the GEC 4070 to be accessed from any of the network terminals.

The GEC 4070 installation includes 128 kilobytes of store, 9.6 Mbytes of cartridge disc store and a cassette program loader. Supplied software is Babage, for £1,750. A Lear Siegler terminal can be added for a further £550.

Software includes assembler, monitor and editor. An analogue interface is available, as is a special card to enable data to be displayed graphically.

Sintron, 20, Vauxhall Road, Reading, Berks. 0734 58464.

### POWER

#### Few spikes on the grid

AMERICA'S power supply networks have won an unenviable reputation for their power "brownouts," as well as for the more spectacular total breakdowns along the industrial belt of the eastern seaboard during the last two years.

A great deal has been done already to remedy the problems which stem largely from a quite inadequate degree of interconnection.

Now, American Electric Power has ordered some unique equipment from ASEA of Sweden which it will install on its 138 kilovolt network in Kentucky to provide stabilisation of line voltage.

The unit is called a static compensator and it will be the first of its type put to use in the U.S. with thyristor switching of the capacitors.

Designing and building the equipment senses surges or ripples in the power fed down the line and automatically smooths them out by absorbing excess energy. This is done without adding further "peaks" to the outgoing power and also with very low power loss.

The ASEA design requires less maintenance than other types of power smoothing equipment and is also easier to modify or expand. The company has been designing and building static compensators since 1972.

ASEA (UK), Villiers House, 41, Strand, London WC2N 5JX. 01 930 5111.

#### Misuse of variable capacitors

LATEST publication to be produced by the International Electrotechnical Commission is a guide to the use of variable capacitors in electronic equipment.

The variable capacitor, says the Commission, is a component which, because of its robust construction, is probably more misused and ill-treated than any other electronic component.

Copies of the guide can be obtained from the Commission at 1, Rue de Varembe, 1211 Geneva 20, Switzerland, price SFR 14.

#### Package for beginners

MICROCOMPUTERS which use the 2-80 processor in combination with the Micropolis high-capacity mini-disc are offered by Sintron Electronics, of Reading, Berks.

A complete packaged system, the Vector Graphic, includes input/output card, monitor card and a single 145K capacity disc,

for £1,750. A Lear Siegler terminal can be added for a further £550.

Software includes assembler, monitor and editor. An analogue interface is available, as is a special card to enable data to be displayed graphically.

Sintron, 20, Vauxhall Road, Reading, Berks. 0734 58464.

# The Property Market

BY JOHN BRENNAN

## State scheme boosts funds

NO DETAILED figures are available on the amount of additional institutional investment that will be available following the introduction of the new state pension scheme in April. But as Britain's 85,000 pension funds have had to upgrade benefits and increase contributions to come into line with the state scheme, last year's net investable funds of £3.2bn within the pensions sector look certain to rise significantly more rapidly than the general rate of wage and salary increases.

Legal and General Assurance (Pensions Management) which this week reported a £143m increase in funds under manage-

ment to £893m in the first half of the year, confirms this point by commenting that "some of the substantial growth is accounted for by the stimulus of the new state scheme."

L and G's fund is now taking in £121m a year, £21m more than in 1977. The fund estimates that around three-quarters of that increase can be accounted for by pension managers trying to keep pace with the state scheme. And it feels that a further surge of new funds is in the pipeline as it waited until the last minute before upgrading their benefits.

It may not be the most elegant cast around for a management

vehicle for their additional money.

One obvious result of this additional institutional investment is the increased strength it gives to the "weight of money" argument within the property sector.

L and G itself, commenting on the performance of its £355m property fund, makes the circular argument that, despite the possibility of "an uneasy economic passage" ahead the outlook for the property sector is "for current values to be sustained influenced by escalating building costs, rising rental values... and increasing cash flows available for property investment."

It may not be the most elegant argument to justify property

investment on the grounds that, as everyone else is investing in it its price is bound to hold up. But it is a convincing argument. L and G has taken its first steps into the development market this year, with a number of industrial schemes and the shopping centre schemes at Eastbourne and Warrington adding up to a current development programme valued at just under £5m. Further developments are under consideration. But the fund expects to keep its total annual development expenditure to under 10 per cent of any one year's investments.

Department of Trade and Central Statistical Office figures earlier this week showing that retail sales now match the peak levels of 1973, but that industrial growth is still very sluggish, provide timely justification of the unusually high retail content of L and G's property fund. Offices account for 52.3 per cent of the fund by value, industrials just 12.3 per cent, and shops 33.2 per cent. Farmland makes up the remaining 2.2 per cent.

luxury hotel started. Now that the accountants have found a buyer for the block, through K, F and R, they hope to further reduce the financing banks' loss by selling M-B for its only remaining impressive quality, its accumulated tax-losses.

Montague Evans, who advised the U.S. buyer, has gathered consents from the Greater London Council and Southwark to convert the Southern wing of the building, a wing that would have held around 240 bedrooms in the initial M-B design, to office use. Sea Containers will move its British subsidiaries into the converted offices, and will complete the remainder of the block as a five-star hotel on a joint venture basis, possibly with the U.S.-based hotel chain, Marriott Corporation.

Knight Frank and Rutley will be reluctant to take down one of the most visible "For Sale" boards in London. But accountants Prince Waterhouse are relieved to have carried through the critical first stage of the sale of the King's Road hotel development after a 15 month receivership.

As reported in the Financial Times on Tuesday, a subsidiary of Sea Containers Inc. of New York, the U.S. marine freight group, has agreed to pay \$9m cash for the uncompleted building. Sea Containers has already paid a 10 per cent deposit, and will pay the balance of the money on completion, early in October.

Price Waterhouse's pleasure at the deal follows a number of abortive offers for the block which stands, ghost-like and

Freddie Mansfield

shrouded in plastic near Blackfriars Bridge on the Thames. Only one other firm, but lower offer was received by the accountants, whose partner Mark Homan was appointed Receiver and Manager of the development. Mella Buckley

Apartment in 1976. M-B, jointly owned by Mella Hotels and Buckley Construction and financed to the tune of more than £15m by a consortium of mainly U.S. banks, went into receivership three years after work on its 736-room Marriott Corporation.

## IN BRIEF

**BERNARD SUNLEY** Investment Trust has exchanged offers for the sale of its Sunley House offices in Rue Belliard, Brussels for a net £8.25m. The sales proceeds, which will be received in December, will be used to repay currency borrowings. The resultant interest saving is expected to boost the group pre-tax income by £700,000 in a full year. Sunley recently reported pre-tax profits of £2.64m in the year to the end of March.

**LAING DEVELOPMENT**, soon to be floated as a separate property company from its construction group parent, has acquired Ralph Hilton's former 6.23 acre industrial site in Lombard Wall, Charlton, South London.

Laing bought the site from the receiver of Roadships, the group that succeeded the ill-fated Ralph Hilton Transport. And the acquisition gives it one of the largest vacant warehouse buildings in London, with a 120,000 sq ft unit now being offered for a two month short let through Russell, Cash and Donaldson and Son. After the two months Laing plans to sub-divide the existing building into units of between 10,000 and 40,000 sq ft and to build a further four 10,000 sq ft warehouses that will be ready for occupation late in 1979. The industrial estate, which will have an eventual capital value of around £3m, acquired a temporary fame before the Hilton collapse as the location for outside scenes of the television soap opera 'The Brothers'.

**W. H. BLATCH INVESTMENTS**, the private, Scottish-based property group, has won the contract to carry out a £3m, 120,000 sq ft development in Nunston, Nunston, Borough Council has accepted Blatch's plans for the redevelopment of the town's old Gas Works site next to a proposed ring road that will eventually connect the site

Trafalgar House, Nigel Brookes four years—and by running a and Victor Matthews' shipping, very low profile, if high price, property, civil engineering and sales programme of individual publishing group, abandoned flats.

The flat "break-up" business on a large scale back in the early 1970's. But Trafalgar has maintained a discreet interest in the residential dealing market by making the occasional, top class flat block purchase—just three, 21 flats at 15, Grosvenor Square, blocks in Mayfair in the past 10 years.

up, bridging finance for the scheme. But long-term, possibly overseas, funding is being discussed by the developer, which has been active in the Dutch property market in recent years.

**THE BRITISH** Property Federation is sponsoring the establishment of a property development fellowship at Reading University. The federation is to provide a grant of £2,000 a year for an initial period of three years to the University's Department of

The 1936 block containing some of the largest central West End flats to survive—as privately rented residential space. And, as three of the larger flats facing Grosvenor Square are immediately vacant, or empty by October, it is understood that Savills' original rule-of-thumb tender reserve price of just over £2m has been comfortably exceeded.

Hamptons, who advised Trafalgar on the purchase and who remain as selling agents, are talking in terms of £600,000 apiece for the three unmodernised flats falling vacant this year. The agent will be seeking considerably more once work is completed on modernising the common part of the building and updating the 4,037 square feet, four bedroom flats.

Leases on the remaining unfurnished flats fall in by March 1981. But as tenants can claim security of tenure, Trafalgar is willing to take a long term view of the property.

The group has acquired the block from sub-leaseholders of Friends Provident, which holds a 99-year lease—less three days—from the freeholder, Grosvenor Estate. Friends' lease expires in August 2034, but as its fixed ground-rent amounts to just £2,800 a year, Trafalgar has made no move to buy out the insurer's interest.

Land Management and Development to set up the new post, the British Property Federation Visiting Fellowship in Development.

The BPF has been looking for ways to encourage an understanding of the property development role, and it sees the fellowship, which will come into being on October 1, as an ideal way to increase the academic respectability of development and to spread the word that developers rarely live down to their cartoon image.

LOMBARD

# Skirmishes on inflation

BY PETER RIDDELL

THE FIRST skirmishes of the election campaign have already started; the clichés have been dusted down and the insults sharpened. The evidence comes from the unseasonal eagerness with which both ministers and shadow spokesmen have produced lengthy statements on the most arcane economic statistics in the past 10 days. There almost appears to be a duty rota of a spokesman for every occasion.

## Sloganising

So far, the standard of the statements has not slipped too far; it is, of course, possible for reasonable men to disagree. But it is depressing that the most favourable and unfavourable possible interpretations are placed on the figures. It requires no great leap of the imagination to put exactly the same words into the mouths of the other side if the roles were reversed.

The real test of the politicians' resistance to the temptations of sloganising will come today with the publication at noon of the retail price index for mid-July. It looks almost certain—or else there will be a session of almost Maoist self-criticism in Bracken House—that the figures will show an increase in the 12-month rate of retail price inflation for the first time in a year.

The likely increase in the 12-month rate is not of itself of any real underlying importance whatever today's statements may say. The rise may have a certain symbolic significance in that the 12-month rate is likely to have reached a low point for the time being, in mid-June when the rise was 7.4 per cent, less than a third of the rate three years ago.

However, any rise in the rate in mid-July will almost solely reflect the fact that comparison will be with a month in 1977 when the index only rose by 0.1 per cent, because of sharp falls in the price of seasonal food. The increase in the month to mid-July this year is likely to have been higher on the basis of the recent trend of monthly rises of at least 0.5 per cent. So any increase today in the 12-month rate does not automatically portend a sudden acceleration in inflation.

There is plenty of evidence about what the underlying rate of price inflation is now. The best current guide is the index which excludes seasonal foods with increases measured over six months and expressed as an annual rate. This has risen since the early spring from 6.8 to 8.9 per cent. In the period to mid-June, even after allowing for the exceptionally big rise in April, the figures suggest a slight pick-up in the underlying trend.

Looking ahead, neither the steadiness of the Price Commission index of notified prices nor the continuing moderate rise in wholesale output prices point to any dramatic change in the trend of retail prices later this year. A bigger response might actually have been expected in view of the acceleration in the rate of increase of labour costs in the last year and the fall in sterling this spring. There are, of course, considerable time lags in the transmission of cost increases. But it is possible that companies may be reluctant to push up prices in spite of higher consumer demand because of the intense competition for imported goods. Consequently, Mr. Roy Hattersley, the Prices Secretary, may well be proved right in his prediction that the 12-month rate of retail price inflation will fluctuate around 8 per cent for the rest of this year, but this will only be achieved at the cost of a squeeze in industry's profit margins.

## Less comforting

It is much more difficult to make any projections for 1979, as this week's National Institute pointed out, there is no firm basis for making a central forecast for average earnings. But the recent rise in sterling and likely flat trend in commodity prices suggest that pay rises will have to be more than 12 per cent in the new round in order to push the 12-month rate of retail price inflation much above a range of 9 to 11 per cent. The real lesson is not the one of disaster or relative complacency which may appear in today's statements but the less comforting one that all the sacrifices recent years have achieved in order to ensure that prices double every seven or eight years, rather than just within the life of a single government.

# Around Britain

## EDINBURGH FESTIVAL

BY RAY PERMAN

IT IS an old fallacy that Edinburgh people do not particularly care for their Festival; that every year at this time door-to-door salesmen knock on their houses of sombre stone and leave the city for foreigners to wallow in a three-week orgy of culture.

In its 31 years the Festival—this year's opens on Sunday—has become an institution, and Edinburgh loves institutions. It lurches from financial crisis to financial crisis, but each time is saved at the 11th hour as everyone knew it would be. For Edinburgh now without the Festival is unthinkable, as much for the citizens as for the city fathers.

It was not always so. When the Festival idea was first mooted by a small group led by Rudolf Bing, then general manager of the Glyndebourne Opera, there were plenty who thought it too adventurous and too expensive for the austere post-war years.

But it survived the rationing and the doubters and now, among the largest and most prestigious in the world, rivaling Salzburg and Bayreuth, it is of immense value to the city, both in terms of hard cash, and in the status it bestows.

But it is also looked upon as an event to be enjoyed.

Edinburgh people buy around 30 per cent of the Festival tickets every year and a similar proportion is taken by Scots from elsewhere. Visitors from south of the border and from abroad occupy only a minority of the seats.

The Festival has maintained its wide appeal by offering a varied programme. It is not tied to one composer, like Salzburg is largely to Mozart or Bayreuth to Wagner, and always includes drama alongside music, often opera, occasionally ballet and even revue.

This last is, of course, a forte of the Festival fringe, which grew from one or two performances in schools and halls on the edge of the city centre to its present state where it has a full-time administrator and includes 140 different programmes of extraordinary range. Though basically one is highbrow and the other low, the Festival and the fringe do overlap. Alongside its wider offerings, the fringe includes serious music and drama and is often forgotten that "Beyond the Fringe" was an "official" Festival production.

He festival has now also spawned an Edinburgh Film Festival, which is growing in international stature, and a

number of other less formal entertainments. Three years ago the city's licensed trade persuaded the magistrates to allow late opening in more than 300 pubs, restaurants and hotels and the experiment was a huge success. Now the Continental luxury of unburied drinking after a show is part of the scene. Even the police have pronounced themselves satisfied with the results.

Despite the strong local support, the Festival does attract an enormous number of visitors, who fill hotels and boarding houses and spend their days in shops as well as their evenings in concert halls. A survey by economists from Philadelphia in 1976 estimated that the Festival brings around £15m a year into the city and achieves worldwide publicity worth a further £2m or more.

It is largely due to the Festival that Edinburgh has become an international tourist centre, with a season that goes on into September.

Yet the outlay to achieve this return is minimal by international standards. Edinburgh is a festival run on a shoestring. Last year, the Festival Society spent £788,000 on productions and got back £516,000 in ticket revenue and broadcasting fees, leaving £272,000 to be found by the City Council, the Scottish

Arts Council, profits from the military tattoo and private donors.

The Salzburg Festival, which sells around the same number of tickets (although it usually has fewer performances and lasts five weeks rather than three), had a budget of £5.4m in 1976. Its deficit is spread much wider: 40 per cent is met by the provincial government, 20 per cent by the city and the remainder by tourist boards. And Edinburgh's tickets—although they seem expensive enough to British wallets—are a fraction of European prices.

It does not take a degree in economics to work out that, as Edinburgh consistently attracts international names—this year Daniel Barenboim, Claudio Abbado, Teresa Berganza, Isaac Stern, Pinchas Zukerman, Dietrich Fischer-Dieskau and many others—they must come for something else than money.

Neither the Festival Society nor the artists themselves care to talk too much about it, but it is obvious they cannot be paid fees competitive with those they earn abroad. They come for the pleasure of performing in Edinburgh and with orchestras, the standing of the London Symphony, London Philharmonic, Chicago Symphony, Dresden Staatskapelle and the Scottish National, and opera-

All for Love at the Assembly Hall.

companies of the calibre of Scottish Opera, Zurich Opera and Stadttheater Buhnen.

Programmes are partly chosen by the festival director, but artists have a lot of freedom in what they perform. There are always well-known works, but also pieces that will be new to many concert audiences. This year, there is a lot of Janacek and works by Baermann, Lutoslawski and Massiani.

But the financial stringency imposes some restraints. "We have a real need to build up some reserves so that we can put on more adventurous programmes that are commercially risky," says Iain Crawford, the Festival Society's publicity manager. His is the delicate and demanding task of trying to build up sponsorship for productions.

"It is ironic," he comments, "that while we are struggling to raise money from sponsors there are people in Zurich who are only too willing to pay towards the costs of Zurich Opera and the honour of seeing their local performers appearing at the Edinburgh Festival."

Sponsorship of the arts has been slow to catch on in Britain, but Mr. Crawford has had some notable successes. Last year's Carmen, for example, acclaimed by the critics, was made possible by £35,000 from BP, and this year the Royal Shakespeare Company is receiving £10,000 in sponsorship.

"We try to ensure that our sponsors get something in return for their money. We realise that you can't just take the money and ignore them. But it is difficult to quantify what they get in return."

# Shorter distance should give Salamis her first win

BY DOMINIC WIGAN

SALAMIS, who would almost certainly have won before now had she not been fulfilling the role of pacemaker to that top-class stablemate Cistus, looks set to gain a deserved first success in the Ashford Stakes at Kempton this afternoon.

## RACING

BY DOMINIC WIGAN

able sixth of eight behind Seraphina in the Nell Gwynn Stakes at Newmarket's Craven meeting, returns to five furlongs after three abortive attempts at distances varying between seven furlongs and one-and-a-quarter miles.

By that top-class miler Sir Prince out of the Matador mare Bandarilla, Salamis is responsible for Salust and Strebo, Salamis

ought to be seen to far better advantage over this trip which she tackled for the first time last year.

I take her vastly to increase her chances of winning over the one-time five furlong hope Lily Martene, an inmate of the in-form Newmarket stable of Luca Cumani, who has just returned to headquarters after a spending spree at Saratoga.

Even if he fails to take the opener through Salamis, Willie Carson—about to widen his field of earnings through a number of materials and other promotions—should have at least one winner for both Ravensbourne and More Light, another Hern filly, need only reproduce her encouraging homework to take all the heading in the Chertsey Lock Stakes, from which Golden River is a surprising absentee.

A year ago Michael Stoute saddled the heavily backed Deseret to land Hamilton's 10-runner Hallett Stakes, and it looks more than likely that he will repeat the success through Gregorian this afternoon.

## Down with the Dog Days by GEOFF BROWN

Backroads/The Love Letters from Terabithia Road. Screen on the Hill. Beauty and the Beast (U). Classic Oxford Street.

No-one seems to have been trying very hard this week. The distributors are enjoying the summer lull, with no major films to push out. Us critics have been trying to find a few of modest virtue to films of immediate release, encouraged on our way by an unusually large amount of proffered quiche, sausages on sticks and glistening glasses of red or white. And the productionists have been trying to find a few of modest virtue to films of immediate release, encouraged on our way by an unusually large amount of proffered quiche, sausages on sticks and glistening glasses of red or white. And the productionists have been trying to find a few of modest virtue to films of immediate release, encouraged on our way by an unusually large amount of proffered quiche, sausages on sticks and glistening glasses of red or white.

was not my idea of a happy working schedule. The film which almost made it all worth while was Backroads, an hour-long Australian production showing at the Scala with another Australian film, The Love Letters from Terabithia Road. Like Peter Weir's The Last Wave, Backroads has a melancholy reflection on the way the Australian cinema has gained critical approval and bigger budgets only to lose its vigour and imagination. But the directors of these examples — Phillip Noyce and Stephen Wallace — have set to sleep into the major league and have never had the time or the money to over-reach themselves. Like The Last Wave, Backroads is a key factor in the drama of Backroads. But where Peter Weir used them as a fashionable, centre-piece in a pretentious apocalyptic fable, Phillip Noyce looks simply and honestly at their feelings of apathy, bitterness and isolation. Living in bushiness and squallor after years of misadventure and neglect by their white overlords. The only way for them to break out of their lethargy is to lead

a slap-happy life of crime: this is what Gary does, in the company of a raucous white drifter called Jack King. Together they rob cars, clothing stores, petrol stations and, once equipped, embark on an aimless odyssey across the country. Others join the party, including a French biker-killer called Claude, a lonely girl from a petrol station, and Gary's Uncle Joe, who drinks heavily and cuts a mean figure when holding a shotgun. After much boasting, bickering and foul language, they reach the sea. The girl steals their car; they try to steal another one, but violence erupts and the police bring their journey — and the film — to an end. The film's focus on the Aborigines' problem is refreshingly clear. Gary is played by black actor Gary Foley, and the character of Jack King is a walking incarnation of the white man's oppressive prejudices. "While you're here, enjoy my country, will you?" says Gary to the white man. "I'll be back, after suffering King's acid taunts. But the film makes plain that the country is only his in theory

and the history books. The country also looks anything but enjoyable. For Russell Boyd's photography emphasises its dusty wastes and scrub, as the car speeds along mindlessly. Noyce, whose earlier film, Newsfront, has received much favourable comment, keeps his style as direct as possible, and the material, apart from some needlessly fancy cutting back and forth in the travelling car between simultaneous conversations. The companion film, The Love Letters from Terabithia Road, written and directed by Stephen Wallace, runs for 90 minutes and is a lesser achievement, though it's still a distinctive and disturbing piece of work. The love letters (selections from a book by Len Moran, currently estranged from his wife Barbara after many violent quarrels and now seeking a reunion. He comes to Sydney to talk things over with the wife he is leaving, for the wife is hesitant, for the man who writes the letters is gentle and compassionate while the man in person is too often violent and overpowering. Nothing is resolved in this state of affairs, and the film is left slightly stunted as a result. Yet the director's meandering manner usefully enables the camera to take in much telling detail about sordid clutter, public living conditions which put extra pressure on the relationships.

from someone frantically seeking friendship with a person exceptionally endowed with body and mind. But it is the characters who stick in one's gut and make the film as a whole impossible to swallow. Both writer and director, like doting parents, plainly think the world of them, even the egregiously smug Michael, who has had what sounds like a ghastly book about the moods of contemporary society accepted for publication. Yet from my seat in the stalls the best of the characters seemed to be the worst, and the worst were the most irritating; and the fact that the film-makers were turning a blind eye made them more irritating than ever, chattering away glibly to each other and performing bits of business merely designed to ingratiate the creators and their creations, the world of the film appears shallow, the characters jejune. With only the talents of the performers (chiefly John Heard and Lindsay Crouse) heading off

Harold Cambridge, Mark Wingett and Paul Grant

## Shaw

## England, My Own by MICHAEL COVENEY

Seventy lads in white shirts and black ties bellowing "Jerusalem" whose open-eyed acceptance of a setting of bleak his lot in a vigorously mixed council flat concrete is the opening image of Peter Terson's latest epic for the National Youth Theatre. A portly insurance collector cuts across the jingoistic cacophony with his tale of a dream of fair Anglo-Saxon Borsla chums in brown shirts. Protestants once more pounding the green and pleasant. He is both our guide and commentator on the absorption of one Adam Butter into the cloud cuckoo-land of the National Front. He resembles Martin Webster and talks with the sing-song persuasiveness of Enoch Powell. Adam is presented as the archetypal victim of pink school-teachers, devils workmates on the factory floor and a son in adversity. He is a nice lad—very yawning dramatic gulf between personable in Mark Wingett's bald statements of Adam's

A scene from 'Between the Lines'

Between the Lines is the new film by Joan Micklin Silver, director of the slight but accomplished Heister Street, that black-and-white portrait of New York ghetto life at the end of the 19th century. Her subject, in a way, is still communities and the community spirit, but she has moved up to date and up the Eastern seaboard to Boston, where a group of young journalists are struggling to keep aloft their newspaper, the Back Bay Mainline, along with their own crusading spirit. In the face of a take-over from a commercial conglomerate. The script is written by Fred Barron, a reporter with Boston experience who obviously made ample use of it in the film. There is certainly nothing wrong with the way the Mainline offices look (as any visitor to the old kingdom of Time Out magazine at King's Cross could testify). The rooms are fairly basic with some minor, malfunctioning coffee machines, peculiar pictures stuck up on flimsy cabinets, people sleeping under pinball machines. And the personal advertisement that eager greenhorn David (Bruno Kirby) takes down over the phone has exacted an advertisement

The week's crowning indignity is provided by Beauty and the Beast, a remake of Jean Cocteau's wonderful film of 1946, with all its magic, humour and visual panache removed and weak-kneed whimsy inserted in its place. This foolish task was performed two years ago on English locations (including Knobworth and Sudeley Castle) by the American director Fidler Cook, whose previous work (Prudence and the Pill, How to Succeed in Marriage—And Ruin Your Life) hardly prepared him for a full-blooded fantasy. The Beast himself is played by George C. Scott, his strong features clearly poking through the make-up of his bristling mane and beard, tortuous skin, fulsome snout and attendant tasks. So disguised, he acts mostly with his eyes, which frequently assume a fetching wog-begone look to indicate the unshining depths of sadness behind them. Beauty, Trish Van Devere, beautiful indeed, though her American accent grates with the native inflections of others in her nasty, avaricious family (Bernard Lee, Virginia McKenna). And once she becomes cursed by the courtly beast of the Beast, she is kept in his prison in his castle until she releases him from his disfiguring spell with the power of love. She is asked to perform an inordinate amount of winsome smiling, guaranteed to set anyone's teeth on edge for several hours. The film should be taken down and put away by La Bete et la Bete immediately.

## American television

## Fresh air at last

by FRANK LIPSITZ

Until two years ago, the most predictable aspect of American television was not so much the plots of the situation comedies (predictable as they were) as the dominance of the ratings by CBS, followed in turn by NBC and ABC. When a former CBS employee, Fred Silverman, put ABC on top by capturing the imaginations—and the evening hours—of the American counterpart to football match hooligans, a new ratings war developed that was more interesting than the programmes.

Papers and magazines accused CBS of being too complacent and dominated by its founder, William Paley, whose instincts, at 76, were no longer in tune with the generations he weaned on television. ABC, as the underdog, was applauded for its success while being justly accused of insulting the intelligence of its audience. Programmes like *Happy Days* and *Welcome Back, Kotter* celebrate the benign side of teenage obscenity; *Charlie's Angels* gets as close to prime-time pornography as battered standards allow. In its heyday, CBS was considered the Tiffany of the networks, mixing its anodyne situation comedies with a top-flight news bureau, as something of a gesture of noblesse oblige. As so often happens, when the despot was overthrown, the celebration lasted until the new despot showed his pearly teeth.

During the summer, the losing networks, which now include CBS, hunk their wounds and plot the strategy that will put them back on top. In June, Silverman moved from ABC to third-ranked NBC, with a million-dollar-a-year salary and the daunting task of lacking his own success.

All the networks play the

extremely expensive game of testing out new programmes and CBS in particular has wisely used its exorbitant profits in the past to buy it. It is sinking millions for dollars in testing programmes it hopes will be even more fatuous and popular than ABC's.

CBS does its market research in New York City, handing out free tickets in front of corporate headquarters (seemingly much less scientific a procedure than rating agencies claim to provide). Supposedly a show goes before 600 to a thousand people, but the day I went, only eight people were willing to sit around a conference table to watch "You and Me," a situation comedy about a young couple. Chronically unemployed, the young man wears a chicken costume to advertise a fast-food restaurant. His wife notices an ad in the paper for a joke writer for a local evening newscast. He gets the job with innate tameness on fabricated innuendo stories (an item about a steam engine that presses a man's clothes as he drives is the only one I recall).

Each of us was given 30 minutes to register approval or disapproval during the programme. Afterwards we were given a questionnaire we filled out anonymously but with our ages and education indicated. We marked our degree of sympathy for each character and our preference between the programme and competitors on other networks. A young lady then asked several people to discuss the show, and their comments must have shocked her as much as they did me. One man dismissed it as rubbish. A bar owner from Oklahoma said the show's customers if she put it on in her bar. Had Mr. Paley been listening that afternoon, he probably would have ordered a whole new programme.

mining department or sold his stock by morning. Fred Silverman seems to have derived on a dramatic volte face at NBC. He informed production companies that he does not want any emphasis on sex and he has already cancelled shows with that orientation (most of them imitations of his work at ABC). These moves have been such a surprise that there is speculation he will take the netless direction in a new direction altogether. Rather than compete head-on, it is thought he may try to put some quality into his programming and make a respectable income from shows with smaller audiences but more prestige. Rich conglomerates already support public broadcasting and no doubt realise it is a cheap way to reach the more discerning customers.

An indication of NBC's new direction comes from a recent pre-season premiere, one that was planned before Silverman's arrival but was allowed to appear on a daily basis. It is a live network show, going to 155 stations around the country to compete with CBS's domination of the ratings with soap operas. Called "America Alive," it revolves around Jack Linkletter in a New York studio that looks like a spacious split-level house perched among the surrounding skyscraper towers. Co-hosts in California and around the country come in on live remote pick-up. At a preview run for the Press, the show's producer, Woody Fraser, emphasised the show's pursuit of topicality—not yesterday's star or the day before yesterday's news. Travolta is already passé; today it has to be Warren Beatty. And so he put his production budget into remote pick-ups to follow the stars and the stories wherever they are.

In addition the show will provide regular features, including a media critic and a bi-weekly segment by the sexologists, Masters and Johnson (talking on subjects like infertility). The media critic David Sheehan was willing to call Jack 2 about an interesting watching your sunburn peel. David Morowitz as the regular consumer critic came right out and recommended Rayovac batteries over the heavily advertised Duracell ones. It is not revolutionary, but it is a welcome change, especially if it is a harbinger of more pervasive change come autumn.

The one-man Australian play *The Bastard From The Bush* written by Rodney Fisher and Robin Ramsay, will be given four performances at Riverside Studios, Hammersmith, on September 10, 17, 24 and October 1, 8 p.m. The *Bastard From The Bush* features Robin Ramsay's portrayal of the writer Henry Lawson. It was first performed in September, 1977, at Melbourne's Russell Street Theatre.

## Elizabeth Hall

## More Schubert

by ARTHUR JACOBS

The absence of its best-known stars did not mar the South Bank's "mainly Schubert" festival from reaching a very high level of distinction last night. Indeed, for a subtle, perfectly felt and entirely convincing performance of a little-known work, the approach of Shlomo Mintz and Yefim Bronfman to Schubert's violin and piano sonata in A minor (D.355) could hardly have been bettered.

Performing it more slowly and with more sense of relaxation than I had expected, they were able to give musical value to little phrases and to individual notes within what might have otherwise passed merely as a vigorous "run." At the very end, where the composer's marking is not too definite, their hushed coda made a touching farewell.

Throughout the sense of partnership (both artists, as it happens, are Soviet-Israeli) was impressive. Exactly as one heard Isaac Stern when students were each player had entered the violin world — Mr. Mintz's violin matching the percussive attack of the piano. Mr. Bronfman's piano "singing" like strings instrument when their two motives intertwined.

Something of the same relaxed approach to Schubert entered into the interpretation by Mr. Bronfman and Joseph Kalich.

stein, of the Fantasy in F minor for piano duet, did not sound quite as well. There are places where a more athletic stride and more excitement are needed in order to realise the contrasts and interconnections in this long and masterly work. Nevertheless, this was always a musically alert performance, and deserved a better piano (especially in the top register) than the hall provided.

Finally, in Schubert's well-known Piano Trio in B flat, Mr. Mintz and Mr. Bronfman were joined by Yo Yo Ma, Of Chinese origin but born and educated in France, he is a cellist of the highest artistic gifts. His instrument sings even in pizzicato, his phrasing is expressive to the point of rapturous. His and the violinist's dovetailing of the music was one of the joys of this performance.

Discounting a few small errors of rhythm, I relished their whole performance of the Trio. (The oddity about the Trio was that Schubert allows in his finale must be put up with, for the sake of the rest.) Afterwards, if chamber-music audiences were so keen to storming, stamping and yelling like opera audiences, the music would have been one of those occasions. The same four young musicians may be assured of a welcome return next Tuesday.

## Albert Hall/Radio 3

## BBC Symphony

by DAVID MURRAY

Another slightly incoherent programme last night with one substantial success: Thomas Hensley's commanding performance of the six *Monologues* set by Frank Martin from Hofmannsthal's famous Salzburg play. Jedermann The Austrian Everyman is not so famous that the audience would not have welcomed a sketch of the linking action between the monologues, though the general dramatic plan can be guessed: the programme book gave only the runic texts and a musicalological note. On paper, these fearful denials and pleas look awkwardly snipped from their contexts, and Martin treated them with such selfless respect as to allow his music no independent voice beyond the words—no orchestral peroration, no added commentary. The scansion was strictly observed with no more liberties than a classical actor would take.

That sedulous fixing of limits was entirely characteristic of Martin, and a performer of *Bare Mountain*, too—Mussorgsky's original, not the familiar need not feel any constriction in them. The pieces lie very well for his harp, which carried splendidly through the ball, and he supplied sense and shape to the cycle with unwavering conviction. To great a variety of historic colour would have been misplaced, and indeed Hensley drew upon his dramatic resources: the exact placing of a word, a suggestion of ironic

parentheses around a phrase, an astute contrast of levels between self-communing and resolute appeals. With all this, the effect of painful directness was consistent, and the audience was held silent to the end.

This fine and sobering work was conducted by Walter Susskind, who maintained a steady radiance in the orchestral accompaniment. Earlier he presented Mozart's 39th Symphony in a workmanlike way: it was graced with woodwind playing of considerable grace, nose to an Andante of real distinction, touched in with grave tenderness, and subsided with an Allegro brightened by no touch of wit. Shostakovich's precociously assured First Symphony had a comparably one-sided performance, its jokes unpeeled and the tempo-changes of the finale struck with some grinding of gears. The gears ground painfully in *A Night on Bare Mountain*, too—Mussorgsky's original, not the familiar Rimsky-Korsakov version (which he called to be titled "Fantasy for his harp, which carried splendidly through the ball, and he supplied sense and shape to the cycle with unwavering conviction. To great a variety of historic colour would have been misplaced, and indeed Hensley drew upon his dramatic resources: the exact placing of a word, a suggestion of ironic

# The struggle for control

THE ACCELERATION of the growth of the broadly-defined money supply in June — the rise of £520m was almost as much as in the previous two months together — despite continued Government success in funding its own borrowing, and the threat of penalties on the banks under the corset regulations, must be read as a warning signal, though not at this stage as an alarm bell. Private sector demand for finance is now clearly running well ahead of official expectations when the monetary targets were settled in April, and unless it abates the authorities as well as the banks will have a struggle on their hands.

## Clear signal

The Bank of England clearly signalled its concern by its announcement that the corset regulations themselves, which have up to now been regarded as a short-term measure, will be extended for a full year. The limits look at first sight rather more relaxed, but this is an illusion: the very tight restrictions set for the initial period were intended to allow for the unwinding of essentially window-dressing transactions by the banks; but in the longer haul the growth of liabilities can only be restricted by a careful eye on the growth of lending. The authorities have had to sacrifice one of their central long-term objectives, competition between the banks, to impose on each bank an individual growth limit. We are in a sense half way back to quantitative controls.

This extension of the regulations, coupled with the official refusal to make a cut in minimum lending rate which the market was half expecting, is the true indication of the official mind. The seemingly contradictory action to relieve shortages in the money markets and the recent release of special deposits are not a sign of any policy relaxation, but simply necessary moves to relieve technical pressures which were becoming virtually unmanageable, especially for the clearing banks.

It seems to be a result of very tight conditions which have put the clearing banks into such a difficult position. The result of a reserve asset squeeze and a shortage of official debt instruments is to divert borrowing rates, and direct borrowing towards the clearing banks.

It has required not only a release of special deposits and a resumed inflow of foreign funds, but substantial money market assistance from the Bank of England to relieve these pressures and allow the distortions within the bank system to start unwinding themselves. The June figures, showing the clearing banks enjoying the entire growth of private sector loan business, and reserve asset ratios near their historic low point, probably represent the peak of the distortions. The extension of the corset regulations will banish any lingering thought there may have been of hanging on to an increased market share and paying the appropriate penalty on supplementary special deposits for a time. The relief now available will only start the process of getting the clearing banks back within their limits. The squeeze will inhibit lending, and that is its intention.

## Confusion

The non-bank observer may still be confused by talk of falling interest rates at a time when the authorities are trying to squeeze lending. Past experience would suggest a sharp rise in rates. The explanation lies in the weakness of the dollar. A rise in rates would simply attract bigger inflows. It is thought that is why the corset system, for all its distortions and suppression of competition, is thought to be the appropriate weapon in the existing official armoury to check an unexpectedly high demand for private sector loans. Within the existing rules, this judgment looks right; but the extraordinary confusion of recent weeks only underlines the case for a fresh look at the rules themselves. The cost in uncertainty and in the burden of debt service, looks excessive.

These pressures and allow the distortions within the bank system to start unwinding themselves. The June figures, showing the clearing banks enjoying the entire growth of private sector loan business, and reserve asset ratios near their historic low point, probably represent the peak of the distortions. The extension of the corset regulations will banish any lingering thought there may have been of hanging on to an increased market share and paying the appropriate penalty on supplementary special deposits for a time. The relief now available will only start the process of getting the clearing banks back within their limits. The squeeze will inhibit lending, and that is its intention.

Of course, another counterpart of a resumed foreign inflow is a relative modest figure for domestic credit expansion: excess Government funding has offset most of the continued rise in bank lending, and it is the foreign inflow which has added to the money supply. It may be thought that if DCE is well within its limits, and sterling remains strong, there is little need to worry about the money supply itself.

This is not so in present circumstances. Since the private sector acquired some £400m of sterling from its sales of foreign currency, one might have expected some fall in loan demand; instead, it continued at a rate which suggests an annual total of perhaps £7bn. The causes may be temporary but vigilance cannot relax until this is shown to be so. To ask Government funding to continue to offset lending at this rate would overburden the markets.

Other companies and sectors are also in very real danger. Sir Hector Laing, chairman of the Food and Drinks Industries' Council and of United Biscuits, said this month. He argued that manufacturers' profit margins had been squeezed so badly that, for the industry to survive, food prices would have to rise by at least 3 per cent and probably by much more. Profitability, he added, was "on a slippery slope which is on the point of becoming a dangerous slide." Sir Hector backed up his comments about Britain's third largest industry (sales of over £10bn a year and employing more than 700,000 people) with the latest profitability survey of 31 food companies carried out by the Food and Drinks Industries' Council.

It showed that profit margins were only 2.34 per cent of sales for the first quarter of 1978. This was the lowest since early 1975 — itself a poor quarter — almost two-thirds below their 1971 level of 6.5 per cent. Although the Food Manufacturers' Federation's own figures from a sample of 24 companies are less pessimistic — with margins around 4 per cent — the overall decline during the 1970s has been in the order of a third to a half.

continued bureaucratic and political influence designed to hold down prices artificially to satisfy the political aims of cheaper prices for the consumer, while at the same time pursuing policies in other directions having precisely the opposite effect, has starved industry of profits," Sir Hector complained.

The manufacturers' opposition is on two levels: price

controls have blunted profitability by limiting necessary price rises; and they have had a psychological effect in reducing confidence among managers in their ability to operate effectively. There is little doubt (and on this there is some sympathy within the Price Commission) that the food industry has suffered from profitability. The financial climate has led to a curtailment of innovation; stocks are reduced to a bare minimum, with the consequent risk of interruption to supply; and consumer choice is reduced as very low profit margins items and "own-label" business is scrapped.

The food manufacturers are in no doubt as to the cause of their problems. They argue that increased raw material prices, due to the adjustment to the EEC Common Agricultural Policy, has put extra pressure on margins because of the power of the large supermarket chains intent on fighting a High Street price war for market share. Without doubt the food manufacturers' anger is directed first and foremost at government price controls, which they believe are a political device carried out mainly at the expense of the food industry with little economic justification. "The

figures show a 1.6 per cent real rise of spending on food in the last quarter, compared with a 4 per cent increase for consumer durables. On a 1971 base of 100, the index figure for the quantity of food being sold is 98.6, while that for consumer durables is 128.

Thus the food manufacturers, who traditionally rely on substantial volume growth to compensate for low margins, face bleak times.

This year Spillers has been forced to pull out of the bread industry, with the loss of 6,000 jobs, and J. Lyons, which had to sell some of its hotel, catering, and overseas interests, earlier this year, is the object of a takeover bid from Allied Breweries.

Other companies and sectors are also in very real danger. Sir Hector Laing, chairman of the Food and Drinks Industries' Council and of United Biscuits, said this month. He argued that manufacturers' profit margins had been squeezed so badly that, for the industry to survive, food prices would have to rise by at least 3 per cent and probably by much more. # Food manufacturers in a two-way squeeze

BY DAVID CHURCHILL and CHRISTOPHER PARKES

The cumulative effect of years of reduced profitability has caused a substantial real cut-back of capital expenditure. There has been little new fixed investment; even worn-out machinery has not always been replaced, and there is little scope in many companies for new more efficient machinery to reduce costs and improve profitability. The financial climate has led to a curtailment of innovation; stocks are reduced to a bare minimum, with the consequent risk of interruption to supply; and consumer choice is reduced as very low profit margins items and "own-label" business is scrapped.

The food manufacturers are in no doubt as to the cause of their problems. They argue that increased raw material prices, due to the adjustment to the EEC Common Agricultural Policy, has put extra pressure on margins because of the power of the large supermarket chains intent on fighting a High Street price war for market share. Without doubt the food manufacturers' anger is directed first and foremost at government price controls, which they believe are a political device carried out mainly at the expense of the food industry with little economic justification. continued bureaucratic and political influence designed to hold down prices artificially to satisfy the political aims of cheaper prices for the consumer, while at the same time pursuing policies in other directions having precisely the opposite effect, has starved industry of profits," Sir Hector complained.

The manufacturers' opposition is on two levels: price

controls have blunted profitability by limiting necessary price rises; and they have had a psychological effect in reducing confidence among managers in their ability to operate effectively. There is little doubt (and on this there is some sympathy within the Price Commission) that the food industry has suffered from profitability. The financial climate has led to a curtailment of innovation; stocks are reduced to a bare minimum, with the consequent risk of interruption to supply; and consumer choice is reduced as very low profit margins items and "own-label" business is scrapped.

Since the 1971 CBI price initiative the food manufacturers' ability to set profitable prices has been restrained. The present safeguard provisions, intended to ease the burden on companies under investigation by the Price Commission, are inadequate for the food industry, manufacturers argue. These safeguards are designed to be sufficient to stop a company going bankrupt, but with the volatile nature of food commodity prices—such as tea and coffee—they may not be enough to prevent a financial collapse. In any case, the manufacturers argue that price control hardly acts as an inducement to extra investment in the industry. What is more the effect on food prices of restraining the manufacturers' margins, has been negligible, the manufacturers claim. The rise of food commodity prices has, however, been effective indeed.

In its latest review of agricultural policy in the developed world the Organisation for Economic Co-operation and Development (OECD) said last week that the last ripple of the 1972-73 economic crisis had subsided and that 1977 was the last year in which its effects would be felt by primary food producers.

The swell from Britain's entry into the EEC on the other hand, is still rocking the food industry's boat. The impact of accession on raw food material costs has been chronicled to the point of tedium, but at least the dangers from that quarter have always been reasonably predictable and the easier to handle for that.

Now the Commission in Brussels is making some attempt to prevent the upwards spiral of common price levels for farm produce. The concentration of influential Britons in senior posts in Brussels—or at least the breaking of the French stranglehold—is evidently having an impact.

But food raw material prices in the UK are still a long way below the true common levels by virtue of the way the Government manipulates the exchange rate from national units of account—in which farm prices are set—to real pounds.

At present the gap between the value of the "green pound" and sterling proper is wavering

CASH FLOW POSITION OF UK FOOD MANUFACTURING COMPANIES

between 25 and 30 per cent. By way of illustration, the intervention price of butter in Britain is now £1,495 a tonne. If the gap were closed it would be about £1,900 a tonne. Other commodities would be affected similarly.

The food industry views this situation with some trepidation and is at present calculating how it is likely to be affected by the current talk of applying the European unit of account to farm prices ever gets off the ground. As things stand a Labour Government can be relied on to keep the gap open. But the uncertain approach of the Conservatives to agricultural policy suggests that there might be a rapid move to close it in the event of a Tory election win.

The food industry's continuing campaign against Community barriers which obstruct vital supplies from beyond the EEC's frontiers is closely linked to the relatively simple issue of basic commodity prices.

For example, it is argued in the UK that Canadian hard wheat used in the standard British loaf is a different product entirely from European grain and therefore should not be discriminated against with import charges. So far the British argument has found no backers in Europe.

However, there have been some notable victories. One of the earliest fights, won with the aid of the Ministry of Agriculture, was against the EEC import duty of 44 per cent on navy beans from Michigan. These are the main ingredient of British baked beans. The Community took some convincing that European-grown haricots could not be used in place of the U.S. beans, that the Michigan product therefore was not in competition with EEC beans, and that the import duty protected no one, serving only to increase UK processors' costs and retail prices.

The source of these mock-antique curiosities is a small village in Northamptonshire, where a company called Haddonstone has geared itself up to satisfy Arab fondness for such objects. The company has just received an order from the Sultan of Oman for 45 large urns, an Elizabethan jardiniere and an Italian jardiniere and a French urn. Haddonstone's managing director, Robert Barrow, says Arab companies frequently ask to buy his moulds. "But we always refuse."

The invitation is well printed on card with the Soviet hammer and sickle crest at the top. One recipient was Josh Moskau, the Bonn representative of the Canadian Broadcasting Corporation. He told me on the telephone: "It certainly looked authentic. When I rang up the embassy they were far from amused."

Moskau says there is speculation in some quarters in Bonn that the invitation was a clumsy attempt by an under-cover Soviet organisation to find out who are the Kremlin's true friends—the ones ready to celebrate the suppression of Dubček's "Socialism with a human face."

Good question

Here is another apocryphal example of how a good City man always manages to look omniscient.

Stockbroker: "I can offer you 100,000 XYZ at 120p. They look good to me."

Client: "What is the P/E multiple?"

Stockbroker: "If I told you that, you'd want 200,000."

The concessions won have brought considerable savings to the industry, although there is still irritation with the amount of time and management energy which have had to be spent on the negotiations. And there is no assurance that any of the changes can be considered permanent. At any time an aggrieved European Minister, prodded by an antagonistic lobby from his home country, might take issue with Britain over what are generally considered to constitute breaches of "Community preference."

But the manufacturers' real tactical battle to restore their margins is being fought with the supermarkets. The price war started by Tesco last year has been joined by all the major supermarket chains. This keenness to keep prices down to boost market share—a policy which appears to be working for the larger stores—has stopped manufacturers passing on cost increases to the retailers.

In addition, the major supermarkets—armed with larger market shares—have been putting pressure on the manufacturers to increase discounts for bigger orders. The suppliers, eager to increase their own volume as the only way of improving profitability on low margins, have given in to this pressure in most cases.

The stronger brand loyalty from consumers—as for Kellogg's cornflakes—the easier it is for manufacturers to resist demands for bigger discounts while at the same time maintaining sales volume. Hence the £100m plus spent on advertising food manufacturers' branded goods last year.

And last week the two big baking companies left after Spillers' withdrawal — Rank Hovis McDougall and Associated British Foods—both showed their increase market power by cutting the discounts given to supermarkets. The effect was a price rise of about 1p a loaf.

Not surprisingly, the battle over discounts has prompted the attention of the Monopolies Commission which is carrying out a study into the whole issue. In the U.S. discounts for bulk orders unrelated to cost savings are already prohibited by law.

Manufacturers, however, are aware that the airing of their problems may not be popular. "If it is felt that these claims are the exaggerated blarney of a wealthy industry, let me remind you of what was being said a few years ago about motor cars, motor cycles and ball bearings, among other industries," says Sir Hector. He points out that these industries were the UK housewife or the UK assumed to be in unassailable positions in their markets—both at home and overseas—and were now in decline. "The consequences of ignoring their appeals and warnings are now history."

# For whom the bridge tolls

IT IS proper, but rather beside the point, for the Public Accounts Committee to criticise the Department of Transport for having let itself be influenced by "substantially inaccurate" traffic forecasts when it authorised the building of the Humber suspension bridge nine years ago, a project which was expected to be both costly and self-financing. If cold economic calculation had been the sole criterion, the bridge would not have gone ahead. As the committee members well know, the dominant consideration for the then Labour Government in 1969 was the contribution it believed the bridge would make to Humber's future industrial development, together with the fact that a personal commitment had been made to the bridge by Mrs. Barbara Castle as Minister of Transport in the critical Hull North by-election shortly before the 1966 general election.

## Assumptions

The PAC has a valid point, nonetheless. For the Ministry of Transport did make some calculations of traffic, revenue, and costs—in 1968—and these were closely in line with the figures subsequently submitted by the consultants to the Humber Bridge Board. It was on this basis that Parliament was assured of the project's financial viability in the sense that toll revenue was expected to be sufficient to allow the loan financing to be repaid over a 25-year period. The subsequent five-fold rise in oil prices and the slowdown in population growth could not of course have then been foreseen. But it is certainly not these factors alone that have brought the traffic estimates tumbling down from the 24,000 vehicles a day originally forecast to the 13,000 to 18,000 vehicles a day

that was estimated in 1975. According to Ministry officials, the bridge should still be financially viable, despite the much smaller expected traffic flow and despite its greatly increased capital cost. This however is on the assumption that the latest traffic projections are realised at the level of tolls proposed by the Humber Bridge Board for the project's expected opening next year. At 80p a crossing for cars, £2.30 for light trucks, and £4.50 for heavy lorries, the tolls should be substantially below the savings users are likely to make in petrol costs alone. But they will be many times higher than the levels currently charged elsewhere.

One is not altogether surprised therefore that the Humber board should have joined the Mersey, Tyne, and Dartford tunnel authorities in pressing for an end to the toll system. It may seem unfair that expensive and potentially beneficial estuarial crossings for which there is no ready alternative should have been singled out for the toll system of financing whereas other major road projects (for which there are alternative routes and which have too many exits for tolls to be administratively feasible) have not. The procedure for adjusting toll levels, which was designed in an age of much lower inflation rates, may also be cumbersome.

But these arguments are not by themselves sufficiently compelling to justify a change in what is now well-established policy. If the level of tolls required to achieve financial viability at the Humber and other estuarial crossings places are in fact below the money savings that can be made by those who make the crossing, there seems no reason to depart from the principle of letting the user pay.

# MEN AND MATTERS

## Light of the silvery moon

Latest moves to deport the Reverend Sun Myung Moon are causing heartsearching among some of Britain's top academics. Those who regularly attend conferences funded by Moon's Unification Church — 11 Nobel Prize winners went along to the last one — have now been asked by Moon lieutenants to write testimonials for consideration by the Home Office.

In May, after bizarre allegations about Moon's relationship with the Korean Central Intelligence Agency, and his church's majority shareholding in the arms-manufacturing Tong Il Industries Corporation, a U.S. congressional committee announced plans to subpoena him. He promptly flew to London where he still is.

Moon's two-week visitor's permit has long since expired and he is now awaiting a decision on his appeal against the Home Office's refusal to extend it. So the voice of British academia could well prove crucial to his future. He appears to have made some good friends with his annual International Conference on the Unity of the Sciences (ICUS), costing him around \$500,000 a time.

Among those who have supported the conferences is Professor Brian Josephson, 35-year-old Nobel Laureate Professor of Physics at Cambridge. Along with 40 scientists, philosophers and economists from all over the world he is quoted in a glossy booklet, complementing ICUS and Moon himself.

Josephson told me he could see nothing wrong with supporting conferences that happened to be organised by Moon: "I'm not convinced by the publicity in the newspapers against him."

Other academics, notably the Regius Professor of Divinity at Cambridge, Geoffrey Lampe,

regard the conferences simply as a device to enhance the prestige of Moon's church.

# Seeking a future for Concorde

By MICHAEL DONNE, Aerospace Correspondent

WITH BRITISH Airways having carried its 100,000th Concorde passenger, since it began super-sonic services (with flights to Bahrain) in January 1978, and Air France about to expand its network with direct flights between Paris and Mexico City, the supersonic aircraft appears to have settled down well in the world's air transport system. There are regular transatlantic services between London and Paris at one end and Washington and New York at the other. British Airways also flies to Bahrain and Air France to Caracas, Dakar, and Rio de Janeiro.

Operationally, the aircraft has settled in well. The punctuality is good. Delays or cancellations are rare, and the passengers unanimously praise the convenience the greater speed provides, even if some of them are not quite so content with the cabin service, or with the cramped seating.

But it appears that supersonic civil aviation is here to stay. The big problem is turning it into a profitable service of civil air transport as a whole, which in effect also means how to expand more widely the existing limited routes. Coupled with this there is the problem of what to do about the five aircraft remaining unsold of the original 16 production aircraft.

So far as British Airways itself is concerned, the key to the Concorde problem is utilisation—the number of hours flown every year by each of the five aircraft in its fleet. In 1977-78 the average annual utilisation amounted to only 782 hours, which is the lowest of all the aircraft types flown by British Airways, the highest being the 4,437 hours a year flown by each of its Boeing 747 Jumbo jets, and nearly 2,500 hours by each

Lockheed TriStar. Even BA's turbo-prop HS-748s, flying 1,868 hours, fly more than Concorde. This low BA Concorde use stems from the limited number of routes on which it flies—only New York, Washington and Bahrain—and it accounts for the fact that British Airways last year lost £17m on Concorde operations, bringing to £25m the cumulative losses since the aircraft went into service in 1976. But it must also be stressed that in 1977-78, 215m of the loss was accounted for by depreciation, which BA is now setting at £15m a year for the entire fleet over a period of ten years, to cover the £155m original cost of buying five aircraft with spares and other support, such as a flight simulator.

The bid last December to extend services from Bahrain to Singapore, in conjunction with Singapore Airlines, was short-lived. Only three scheduled flights went through each way before the Malaysian Government stopped Concorde operations through its airspace en route to and from Singapore, on the grounds that the aircraft caused environmental problems.

A resumption of services there, however, could do much to improve flagging utilisation figures. In addition to the direct improvement stemming from the flights to and from Singapore itself, there would be considerable additional benefits, because once regularly serving Singapore, Concorde could fan out across the South-East Asian and Far Eastern regions, with possible services to Hong Kong, Manila, Jakarta, Taiwan, and Korea.

In the meantime it seems as though it will be British International of the U.S. that will be the next to fly Concorde. Under an interchange agreement with

Lockheed TriStar. Even BA's turbo-prop HS-748s, flying 1,868 hours, fly more than Concorde. This low BA Concorde use stems from the limited number of routes on which it flies—only New York, Washington and Bahrain—and it accounts for the fact that British Airways last year lost £17m on Concorde operations, bringing to £25m the cumulative losses since the aircraft went into service in 1976. But it must also be stressed that in 1977-78, 215m of the loss was accounted for by depreciation, which BA is now setting at £15m a year for the entire fleet over a period of ten years, to cover the £155m original cost of buying five aircraft with spares and other support, such as a flight simulator.

What British Airways now appears anxious to achieve is some restructuring of its aircraft fleet. A direct Concorde success, although not directly incurring any financial losses, emerging from the programme, in which they were sub-contractors to the Government, the two manufacturers, British Aerospace and Aerospatiale, none the less feel that to some extent their reputations as aircraft makers are at stake with Concorde. They tend to feel that the Governments and the airlines involved should do all they can to make the aircraft a success, even if that does require a reconsideration of the overall financing arrangements for the programme. The UK and French Governments' response to such an idea is not known.

In addition to British Airways' financial problem, there is the question of what to do about the remaining production aircraft coming off the assembly lines with no buyers in sight. Of the original 16, 14 were des-

igned for airline service (the other two being used for flight development). Of those, nine have been delivered. BA took five and Air France four. Of the remaining five, three have been built: two are on the ground at Toulouse, and one at Filton. The two production aircraft left in final assembly, one each in Toulouse and Filton, will be completed within a few months.

It is the future of those remaining five production aircraft that the two Governments have to settle. It is still possible that some buyers may emerge. At one time, both Iran Air and China were interested. Their enthusiasm appears to have cooled in the past year or so, and there are no indications of an intent to buy from either, but the manufacturers have not given up hope, and are maintaining sales contacts. Some interest has been expressed in the Middle East, where various Arab airlines, including both

Jordan and Saudia of Saudi Arabia, have been discussing a Pan Arab airline operation linking the Middle East directly with New York. One possibility mentioned has been a "cannonball" type service with Concorde, supersonic from Beirut or Cairo to both along the Mediterranean to the French coast, then subsonic to either Toulouse or Paris for refuelling, and on non-stop again supersonically to New York. If these ideas materialise, there could be a market for one or two Concorde, but a leasing deal might stand more chance of success than attempts at an outright sale. Similarly, if Britain's ideas of Concorde services onwards from Dallas/Fort Worth to Central and South America, come to fruition, and if Pan American does decide to join the "Concorde Club," leases seem more likely than purchases.

The suggestion is being mooted around the aerospace industries of both the UK and France that a joint Anglo-French Government-sponsored Concorde leasing organisation is worth considering. It would not only be responsible for the five aircraft as yet unsold, but also for the five aircraft sold to British Airways if a trade-back deal was negotiated with the UK Government. It might also eventually include the four aircraft owned and run by Air France, if that airline wanted to join. Such an organisation could sub-contract the overall maintenance and product support for all the Concorde during the next 15 years or so of airline service to the two manufacturers, British Aerospace and Aerospatiale, while it could also sub-contract to British Airways and Air France the rights to train Concorde crews and provide operational data and support for interested airlines.

The idea of a "Concorde Corporation" is not new. It was first raised some years ago, when Concorde was still being developed, and before there were any airline commitments for it, as a means of stimulating sales throughout the world. But the idea faded when both the British Airways and Air France Governments, bought the aircraft outright. At that time it was hoped that there would be further sales of the aircraft, so that the idea of leasing was not encouraged. Over the past two years, however, a more realistic assessment has shown that sales are more remote than ever, at a price per aircraft of about £30m, so that leasing by a Government-established and owned organisation now appears to be the most sensible way of settling the problem.

Such a body could overcome much more than a Government-sponsored institution to look after a handful of first-generation Concorde. It could eventually provide the vehicle through which continued research into supersonic civil aviation could be conducted, and any eventual second-generation airliner developed.

It would provide a convenient method of tidying up the loose ends of what is clearly an untidy situation, and take the problem of what to do with the remaining aircraft off the Government's backs. It has clear support in the aerospace industries on both sides of the Channel, and appears to be regarded favourably by British Airways, although that airline is more immediately concerned with settling its own financial problems with the aircraft. It is now up to one or other of the two Governments to take a lead.

## Letters to the Editor

### Japanese markets

From the Chairman, Newman Industries

Sir—As an example of the significance of the problem facing this country in international trade, I may say I expand on the point raised by Mr. Miyoshi (August 14), as to Japan's "national economic strategy". It is quite true that Japan's strategy is no longer operating to promote exports in the accepted sense. The strategy is based on economic growth which is currently being achieved by the manufacturing and exporting of Japanese-designed products from a number of countries other than Japan.

An example of this was recently published in a trade journal in Japan wherein it cited a leading ceramic manufacturer in that country who had developed manufacturing operations in Sri Lanka, the Philippines and Ireland to the extent that the capacity of such units provided a very substantial part of the overseas business of that particular concern. In short, therefore, the exports from Japan have not risen because the Japanese businessman has created alternative resources in both developing and developed countries in order to expand his marketing strength.

Japanese strategy, helped by recent American policy, is now almost complete. In addition to supplementing their overseas trade by use of satellite manufacturing operations supported by external finance, they are now in a position to enjoy substantially increased invisible earnings from such investments and at the same time they are strengthening their industrial base through the revaluation of the yen.

American policy of increasing the cost to the consumer of Japanese imports is much too late to be effective in the way that it was intended. Similarly, joint venture/licensing opportunities in Japan are but one stage removed from development of satellite manufacturing operations taking advantage of such a guaranteed market.

In short, therefore, that which is stated is correct, that which is omitted is far more significant. Alan P. Bartlett, Newman Industries, Clifton Heights, Triangle West, Bristol.

### Revolutionised society

From Mr. E. Polymountain

Sir, It is not only the Organisation for Economic Co-operation and Development paper on unemployment (Samuel Brittan's article of August 10) which has not so far received the attention it deserves. This applies to that whole problem of unemployment which Western economies face.

### Industrial innovation

From Mr. A. Robertson

Sir—With all due respect to Dr. Charles Parker (Executive World, August 9) technological innovation is not just the province of engineers. It is a general management problem, demanding as it does the skilful synchronisation of invention, design, production and market.

As for developing "guidelines" for innovation managers, particular concern is short. Therefore, the exports from Japan have not risen because the Japanese businessman has created alternative resources in both developing and developed countries in order to expand his marketing strength.

Japanese strategy, helped by recent American policy, is now almost complete. In addition to supplementing their overseas trade by use of satellite manufacturing operations supported by external finance, they are now in a position to enjoy substantially increased invisible earnings from such investments and at the same time they are strengthening their industrial base through the revaluation of the yen.

American policy of increasing the cost to the consumer of Japanese imports is much too late to be effective in the way that it was intended. ## COMPANY NEWS

## Lex up £3m so far and sees £17m total—rights issue

AN INCREASE in first half taxable profit from £5.33m to £8.37m is announced by Lex Service Group, motor vehicle distributor and hotelier, as well as a one-for-five rights issue at 77p designed to raise some £8m. Directors expect full year profit to be at least £17m compared with last year's £12.48m.

The proceeds of the issue will be used to reduce group indebtedness, and Mr. T. E. Chinn, the chairman, says it will fulfil the company's equity funding requirements for the foreseeable future.

The company is paying a 1.8p net per 25p share interim dividend (1.38p) and has Treasury permission for a 2.7p (2.07p) final.

Mr. Chinn says the trading performance and profit expectations for the current year combined with the issue afford the opportunity to consolidate and complete the process of strengthening the balance sheet which was the motive for its last rights issue in April, 1977.

As at August 8 the group's debts comprised £5.36m of 8.5 per cent unsecured loan stock; other long and medium term loans totalling £24.21m; revolving credit loans of £8.33m; short term loans and overdrafts of £173.167 and credit balances of £4.92m; and third party indemnities of £348.881. At the July 2 half-way balance date shareholders' funds totalled £66.8m. The group has reached conditional agreement to replace an existing £5m loan with a new loan with a 5.5m loan at 12.5 per cent, maturing in 2002.

The half year's profit came on turnover well ahead from £141.6m to £188.96m, and is subject to tax of £1.38m (£0.87m) and the company points out that following a change in trading practice the 1977 half year profit was some £0.8m lower than it would have been under the previous arrangements.

N. M. Rothschild has under-

written the issue, Phillips and Drew are the brokers.

Mr. Chinn says that as anticipated in the 1977 report, the increase in consumer spending in the first half of 1978 had a major impact on the passenger car market and its subsidiary, Volvo Con-

cessionaries achieved a record market share of 1.36 per cent (1.14 per cent) for the Volvo 200 series.

Leyland Cars suffered a fall in market share for the six months and this was reflected in Lex Motor Company's sales volume. However, the benefits derived from Leyland's superdeal promotion, together with increased sales of both new and used Rolls-Royce cars and increased contributions from both service and parts departments, enabled the group to show a 30 per cent profit increase over the first half of 1977.

Although the increased level of consumer spending did not benefit the company's transportation business until the latter part of the period, an overall increase of 15 per cent in traffic volume was achieved in the first half year.

The continuing buoyancy in consumer spending should be of further benefit in the second half.

progressed well and a new depot at Luton is now operational.

With hotels in central London in the first quarter of 1978, overall room occupancy fell by 13 per cent but the second quarter indicates a return to the traditional seasonal level of high demand.

With the Carlton Tower and the Heathrow Hotel showed profit improvements over the first half of 1977. The Garvick Park Hotel was opened as planned in mid-June and made a successful start. In the U.S. its hotel company achieved an increase in profit performance.

The group is continuing its strategy of improving service in all operations.

With "T" car registrations booming and the F.T. Industrial Index back above the 500 level, Lex Service Group has decided to seize the opportunity to get its balance sheet finally straight. Its one-for-five rights issue 16 months ago raised only just over £4m, but with the share price performing strongly in the intervening period the current one-for-five issue is producing twice as much.

This will take tangible shareholders' funds up to £81m and ease net borrowings down to £34m, thus finally taking the group out of the highly geared category. Meantime the results are in line with expectations, and the second half should see the transportation side improving in reflection of consumer spending, while the passenger car market continues to be very active. Looking further ahead, car sales are expected to be strong next year but there is scope for improvement in the commercial vehicle and fork lift hire interests in industrial activity.

At 58p, down 3p on the rights issue news, the shares are soundly backed by a prospective ex rights yield of 7.9 per cent, with a fully taxed prospective p/e of a little over 6.

Mr. C. C. Pocock, chairman of Shell Transport.

## Stronger demand at Distillers but margins under pressure

WORLD DEMAND for Distillers Company's brands continues to be relatively strong and an improving trend in the U.S. is encouraging, says Mr. J. R. Cater, the chairman, in his annual statement.

However, net margins have come under pressure, and therefore prospects can only be viewed with guarded confidence.

There are inevitably many problems ahead, he says. But the effects of a stronger pound, the recent price rises in export markets have had to reflect our judgement of what would be commercially sustainable in the context of a stronger pound, as well as our desire to recover cost increases in full.

As previously reported taxable profit of Distillers increased from £13.6m to £14.5m in the March 31, 1978, year on the back of healthy whisky sales. A current cost statement shows the profit at £14.9m.

Mr. Cater points out that all distilleries remained in production during the year and some increase in both malt and grain whisky was achieved. In January, 1978, Directors believe the group has adequate cover to ensure full and free supply of all brands in the years ahead.

The improvement in barley quality will be mainly reflected in distillery operations in the current year, while the new blending plant at Glasgow for John Walker and Sons has proved an efficient and

economic unit. The new bottling plant should be operating by the autumn.

As already known, Distillers is appealing in the European Court of Justice against the EEC Commission decision which brought to an end the group's dual pricing scheme which operated to protect its European sole distributors from parallel exports from UK wholesalers.

The reluctant withdrawal of two brands from the UK and price increases on five other brands reduced the group's volume of trade and for the year its market share declined at a time when industry clearances fell by some 8 per cent.

Mr. Cater says that the year began with the trade overstocked, although some improvement was achieved in the pre-Christmas period and continued into January when the brands were removed.

During the year a new low priced whisky, The Claymore, was introduced and has already made satisfactory profits. Two other brands have since been introduced, and he says the group is pursuing considerable marketing efforts and resources behind the new brands.

On the Continent, direct shipments to EEC markets declined slightly and its accredited distributors faced disruption as substantial quantities of Distillers' brands were shipped by UK wholesalers.

In the U.S., industry shipments were less than 1 per cent higher than the previous year although brands shipped in bottles performed substantially better than bulk shipped whisky.

Distillers business was however considerably stronger than the industry trend and since Christmas there has been some

indication that sales generally may be expanding.

Price increases in all export markets of some 10 to 12 per cent appear to have been absorbed by world markets without any immediate effect on the group's volume of business.

On the gin side, UK sales were depressed early in the year but picked up later with Distillers' brand being the industry's sole supplier. The EEC decision on pricing has also been affecting distributors of Distillers' products in the EEC.

Capital spending for all last year was £14.4m and accounts show capital commitments at balance date of £9.4m.

At balance date, net current assets were up from £35.3m to £51.5m, with the liquid funds and cash element of current assets ahead from £37.8m to £103.6m. Fixed assets were £124m (£117.3m), although properties with a book value of £67m are estimated to have a current cost value of some £101.2m.

For the six months ended April 30, 1978, profits of New Equipment rose from £45,649 to £58,835, with turnover maintained at £354,242.

After tax £47,346 (£22,733), net profit came out at £29,289 (£13,355) (£0.25p) net-total for the year ended October 31, 1977, was £9,801p per 10p share paid from taxable profits of £115,000.

The company makes tubular steel furniture.

## First half upturn by Woodhouse &amp; Rixson

ELIMINATION of losses overseas enabled Woodhouse & Rixson (Holdings) to improve taxable earnings for the half year in the end of June 1978, from £151,000 to £220,000. Last time the trading loss at La Brie Beige was £172,000 and by full-time had reached £225,000 cutting the 12-month profit to £198,000.

First half sales amounted to £5.7m (£2.1m) and trading profit by the UK companies showed a modest increase. There seems to have been no further deterioration in demand for the group's products overall, but there are, as yet, no real signs of any sustained increase in activity. However, demand in two divisions appears to be better than average for their markets and the rest are keeping pace, the directors say.

For the six months, taxable earnings per 12p share ahead 0.4p at 1.0p. The net income dividend is held at 1.18p, costing £110,000—last year's final was also 1.18p.

An extraordinary debit this time of £70,000 reflects the cost of continuing rationalisation of the group's unprofitable flange manufacturing where it became necessary to reduce the scale of machining operations. Trading losses of £78,000 from the flange activity have been taken into account and no further such losses are expected the directors say.

Confidence at S & U Stores

A great deal has been achieved at S & U Stores in restoring the company's financial position, the directors face the future with

## Second half pick-up at Cooper Industries

AFTER REPORTING a 20.25m drop to £885,000 in midway pre-tax profits, Cooper Industries picked up in the second half to end the April 30, 1978 year marginally ahead from £1.78m to £1.82m, on higher turnover of £24.2m against £20.3m.

The directors say that the current year has started well and they expect a better half-year and another full year of increased profits.

At the interim stage, they said that the company was still running considerably below capacity, but was well equipped to take advantage of any upturn in trade. The substantial capital expenditure programme to improve its competitive position was continuing.

The company's interests are in steel re-rolling, precision engineering, building and metal spraying.

The full-year result included an increased share of cooperative profit amounting to £506,000 (£297,000). Tax for the group took £379,000 (£133,000) and for associates' £284,000 (£101,000 credit).

After extraordinary credits of £222,000 (£128,000 debits), available profits fell from £15.8m to £13.7m.

Earnings per share are lower at 3.7p (3.5p), while a final dividend of 0.45p raises the total for the year from 0.79p to the maximum permitted 0.85p, costing £274,000 (£245,000).

Net assets at the year end are shown as 22.9p (20.4p) per 10p share.

Pre-comment

Profits of Cooper Industries are only 3 per cent ahead but this conceals a 37 per cent advance in the second half, mainly thanks to increased volume and a

## R. Dutch Shell underlying trend still unexciting

NET INCOME of the Royal Dutch/Shell group of companies for the second quarter of 1978 amounted to £300m against £207m in the corresponding period of 1977, giving a first half total of £596m compared with £722m.

As was stated in the first quarter of 1978, currency translation effects based on the U.S. accounting standard resulted in net income of only £20m for that quarter (after £220m currency losses) and bears heavily on the first half result, the directors say.

The second quarter produced net currency gains of £108m.

The fall in first half net income, apart from the currency translation effect was due also to the FIFO method of stock valuation, particularly affected following the OPEC crude oil price rise in January 1977 and the decline in sales volumes of gas.

Sales proceeds, less taxes, excise duties and similar levies were £4,040m (£3,900m) in the second quarter giving £11,790m against £12,060m at half-way.

After half net income per share was £1.19 (£1.08) and there was a surplus of £142m (£49.7p) and NFI 20 Royal Dutch share NFI 7.51 (14.34).

Capital expenditure came to £1,050m against £1,080m with £1,170m (£1,080m) in Europe and £285m (£466m) in the U.S.

Net borrowings (less repayments) stood at £243m (£401m) and there was a surplus of £142m (£49.7p) on the current currency translation effects against a £20m deficit in the first half last year.

Revenues

Sale proceeds	14,192	14,521
Sales taxes, duties, etc.	2,858	2,794
Leasing	11,250	11,427
Other revenues	324	324

Net income	729	729

Crude oil supply was 4,480m (4,380m) barrels daily, crude oil processed 4,13m (4,29m); oil sales, 4,13m (4,29m).

Imperial Group has sold its 13.5 per cent stake in Bunzl Paper, the cigarette filter manufacturer, for £2.5m.

The stake held by Imperial's British Tobacco investment holding subsidiary was acquired in 1962 for just under £2m. The shares were placed through the market with institutional investors. Bunzl's share price last night stood at 108p.

A spokesman for Imps said that British Tobacco had felt that its significant holding in Bunzl had made its investment portfolio "top-heavy". It had decided that now was the best time to dispose of the holding.

BARTON & SONS

Barton and Sons has acquired the whole of the issued capital of Chemetro Engineering and High Pressure Forgings.

Chemetro is a stockholder and manufacturer of flanges, fittings and valves. Barton is a stockholder of high pressure fittings and forgings. The business of both companies is predominantly the supply of specialised components to the oil and petrochemical industries and to contractors based in the UK engaged in the

construction of specialised plants for those industries on an international basis. Both operate from premises at Titchfield, West Midlands.

The initial cash consideration is £200,000 together with a sum equivalent to the net tangible assets of the two companies which are estimated to total about £315,000.

In addition, a further deferred consideration will be payable in cash not later than April 30, 1980, 1981 and 1982, being in each case a sum equivalent to 43 per cent of the amount by which the profits before taxation of the two companies for the preceding calendar year exceed £125,000. According to management accounts the profit before tax of Chemetro for the year to June 30, 1978 amounted to some £215,000 and the profit of HFF for the 15 months to June 30 was £198,000.

Directors of Barton intend to seek further acquisitions in similar fields rather than in the area of heavy manufacturing. The acquisition of Chemetro and HFF was contemplated before serious negotiations commenced for the sale of Barton's South African interests and an accord is expected to be reached in the near future. Barton still has very substantial monies available for

## Norton &amp; Wright advances

FOLLOWING THE rise from £23,887 to £316,571 in the first six months, profits before tax of the Norton and Wright Group increased to £341,033 for the year ended March 31, 1978, compared with £338,971 a year earlier.

Earnings per share are shown at 16.37p (10.36p) fully diluted and the total dividend is lifted from £3,785m to £2,285p, a final of 2.515p. The directors have waived the final dividend amounting to £43,639 (£37,750). A 1-for-1 scrip issue is proposed.

Turnover for the year amounted to £2,586m compared with £2,770m. The net profit is £439,703 against £208,971 after tax of £481,350 (£248,900).

The group has produced and distributes food, raising costs and schemes.

## Strong start by Witan Inv.

After tax of £4,685, against £23,887, Witan Investments lifted net income for the three months to July 31, 1978, from £493,543 to £676,368.

Gross income reached £1,73m (£1,35m) and net asset value at the end of the first quarter was up 23.7p to 132.9p. The share price rose from 132.9p to 150.1p. For 1977-78 revenue before tax was a record £2.6m.

## REA BROS. DOWN

For the first half of 1978, profits of Rea Brothers, merchant banker, were at a lower level than those for the same period last year, the directors report.

The interim dividend is held at 0.725p—total so far to 0.99p. No dividend has been paid since 1972-73.

The Board is actively continuing its efforts to obtain additional finance for the finance division. The return on this investment improved during the year but this will not be satisfactory until the directors are able to secure additional funds.

The Zambian subsidiary once again produced good profits and dividends will eventually be remitted to the UK. Exchange control in Zambia has not as yet released the funds for remittance to the UK of the dividend declared for 1976-77.

GLYNWED SALE RAISES £1.26M

£126m has been raised by Glynwed through the sale of its 8.3 per cent stake in Armitage Shanks. The 1.7m shares, acquired during the year, were sold for Armistage in 1973 which lapsed when it was referred to the Monopolies Commission, have been placed with institutions through Rowe and Pitman, Hurst-Brown.

The sale price of 72p compares with a market price on Wednesday of 77p. A spokesman for Glynwed said yesterday that the money would be used to reduce the company's overdraft.

CHARTERHOUSE JAPHET

Merchants bankers Charterhouse Japhet has acquired the remaining 40 per cent of E. D. Sassoon Bank and Trust International, the Bahamas based international banking and financial concern.

Last year Charterhouse bought a 51 per cent stake in the bank and has now purchased the outstanding holding from Sterling Bank. The bank, which will be renamed Charterhouse Japhet Bank and Trust International, showed share capital and reserves in excess of £2m in its last accounts.

## Magnet Southern One for two scrip issue proposed

Results for year to 31st March, 1978

Salient figures	Year to 31.3.78	Year to 31.3.77
	£'000s	£'000s
Sales	£105,630	£97,882
Profit before taxation	£14,220	£14,461
Profit after taxation	£9,034	£9,567
Earnings per 25p ordinary share	27.9p	30.0p
Dividend per 25p share (Net)	8.932p	8.000p

A capitalisation issue of one new ordinary share of 25p fully paid for every two existing shares registered in the names of members on Friday, 25th August, 1978 is proposed.

Chairman Mr. S. Oxford comments:

"The outlook for the current year is better. Sales to the home improvements market have maintained their upward movement and are expected to continue at a good level. The Group is particularly well equipped for dealing with the growing home improvements market—our factories are working at a high level of efficiency and are well able to supply our large nationwide chain of selling outlets.

The modest increase in new housing activity expected during the second half of the year under review didn't happen. I feel that this is still to come and that we will see a small but welcome improvement during this financial year. Raw material prices have started to move upwards and I believe by the end of this year will have recovered much of the lost ground: stock losses are not, therefore, likely to occur in this year provided there are no violent changes in the value of the £ sterling."

J.P. Collins

# Distillers' exports increase to £300 million

Extracts from the statement by the Chairman, Mr. J. R. Cater, circulated with the Report and Accounts for the year ended 31st March, 1978.

## General observations on results

### Turnover and profits

Total Group turnover including duty increased by only 3.4%. There was a considerable reduction in the amount of duty paid in the UK during the year partly because of lower sales but also because a higher proportion of sales were made under bond. Total turnover exclusive of duty increased by 14.3%. The profit from trading operations amounted to £160.6 million compared with £139.9 million. Increases in the volume of export sales of Scotch whisky and gin were partly offset by reduced sales in the home market which proved to have been very fully stocked at the beginning of the financial year. The improvement in profits resulted principally from maintained average percentage net margins in the Scotch whisky sector on the higher turnover excluding duty. The Food Group and Carbon Dioxide Company contributed slightly increased profits in more difficult trading conditions.

### Dividends

The directors recommend a final dividend of 4.5642p per share. An interim of 2.6950p per share has already been paid making the total distribution 7.2592p per share. Together with the associated tax credit the total distribution is equivalent to 10.89557p per share compared with 9.90507p per share last year.

## Scotch whisky

### Production

Increased levels of distillation were introduced to maintain adequate stocks of maturing whiskies and to provide the balanced inventory necessary to meet our projected sales. We continue to believe that we have adequate cover to ensure full and free supply of all our brands.

The blending section of the new plant at Shieldhall, Glasgow, was commissioned by John Walker & Sons and proved an efficient and economic unit. The bottling plant should be in operation in the autumn.

A major new warehouse site is being developed at Bonnybridge, Stirlingshire, to permit a progressive building programme in line with our stock requirements.

### EEC

My statement last year referred briefly to the EEC Commission's formal objections to the Group's Home Trade Conditions of Sale and Price Terms and indicated that, if these objections were sustained, problems of some magnitude would have to be faced. I believe it is now appropriate to outline the background of events leading to the Commission's eventual ruling and the reasoning that led the Company to the commercial judgments which, in our view, inevitably had to be taken in response to that ruling.

From the earliest days in the development of the sale of Scotch whisky in export markets of the world, each brand-owning company has appointed a sole distributor in individual markets. That distributor is given an exclusive right to purchase the company's brand, and in return undertakes the obligation to promote, by his own efforts and at his own expense, the long term success of the brand in his territory. Scotch whisky is exported to some 180 countries, in which the problems of competition, distribution, discriminatory legislation and taxation vary enormously, and no brand owner could compete effectively in all of these diverse markets other than by coming to an agreement with a local distributor which offers that distributor the necessary incentives to fulfil his obligations. The sole distributor system has, from the outset, played a vital and totally essential part in the success of the export endeavours of the Scotch whisky industry. Disband it, or allow it to become so unattractive to the distributor that he no longer wishes to continue to represent a brand, and it is inevitable that the brand will disappear from important segments of the markets, to the ultimate and serious detriment of Scotch whisky world sales.

Thus, prior to the date on which the UK joined the Common Market, Group Home Trade Conditions of Sale and Price Terms expressly prohibited customers from reselling to any export market in the world. Subsequent to the 1975 Referendum on British membership of the Community, we advised all UK customers that if they wished to export into other EEC markets they were free to do so, but we reminded them that only purchases intended for resale in the UK would continue to attract normal home trade discounts. This was, in effect, a dual price structure to the same customer—one price for resales into the UK market and a different price for resales into other EEC countries. The aim was to ensure that a wholesaler in the UK would not be able to purchase at the same net price as a sole distributor and, with no obligation either to promote or to ensure wide distribution of the brand in an export market, resell selectively to the sole distributor's customers at a price the sole distributor could not possibly match whilst continuing to fulfil his promotional obligations. The longer term effect of such a trade would, in our commercial judgment, inevitably have been that the distributors in the EEC markets would have found it of no interest to continue to represent our brands with the result that these brands would, without promotional support and sales endeavour, have suffered an unacceptable diminution in sales.

We do not question that in the short span of perhaps a year or two the flow of cheap parallel exports into supermarkets abroad might not greatly diminish total sales, since brands would survive for a time on the past promotional services of their distributors, but we equally are not to be deflected from our strongly held belief that the ultimate consequences would be very damaging to the sales of our products. Were such not the case it must surely be apparent that our Group companies would themselves have sought to open up trade with Continental supermarket chains direct.

Finally, and perhaps most importantly, the problem of parallel exports flowing from the UK could not be contained within the EEC. If a wholesaler in the UK is not in a position to purchase for export at net prices which are substantially below distributors' resale prices, the incentives for entering the parallel trade are minimal and that trade would have an insignificantly disruptive effect on export markets. If, however, a UK wholesaler is encouraged by comparatively lower net prices to sell to a third party who orders large consignments ostensibly for any other EEC market, he will do so. That third party then has control of the goods and will seek out the most profitable market which may, or may not, be within the EEC. Parallel exports may therefore find their way into markets of the world generally, to the serious additional detriment of our exports.

Market conditions in the UK are very different from those in the Continental EEC and the rest of the world. In the UK Scotch whisky is a traditional drink and commands 50% of the total spirit sales. The market is dominated by large retail chains and buying groups, and price competition is a major factor. In export markets, brands of Scotch whisky compete against the traditional local drinks (in Germany for instance Scotch whisky represents only some 3% of the spirits consumed) and must do so, particularly in a number of EEC countries, in the face of blatant tax discrimination in favour of local products. In such conditions substantial expenditure on promotional activity is indispensable. This expenditure has to be reflected in the selling price. It is therefore impossible for a brand of Scotch whisky to compete successfully at the same price both in the United Kingdom and in export markets. The dual price structure was designed to take account of this inescapable fact. It was also designed to allow Group brands to compete in the UK and to be exported to the Continental EEC by UK wholesalers as Community law requires, but at a price which would not destroy the ability of sole distributors to maintain their essential promotional activities.

The Company contended that, even if its dual price structure were regarded as falling within the provision of Article 85(1) of the Treaty of Rome, that structure was, because of the distortions of trade and competition in the EEC markets, entitled to approval under Article 85(3).

In the event the Company was advised by the EEC Commission on 21st December 1977 that Group brands must not continue to be priced at two different levels to a customer in the UK. The ruling called for immediate implementation and on that same day we changed our terms to comply fully with the instruction.

Because Johnnie Walker Red Label is the leading brand in world export markets and the prime target for parallel exporters, who were so easily able to capitalise on the wide consumer demand built up by the promotional efforts of its sole distributors, we judged that Walker would have been flooded with under-bond orders on the day following the announcement. We could not increase the price overnight because of UK prices legislation and we were unwilling to leave Red Label to be exploited by others to the longer term detriment of the brand. We accordingly withdrew Red Label from sale in the home market as the only acceptable choice

## SUMMARY OF RESULTS

for year ended 31st March

	1978 £ million	1977 £ million
Turnover	876.1	847.2
Group profit before tax	162.5	133.6
Profit after tax & minority interests	79.8	63.3
Extraordinary items	(0.6)	1.0
Surplus for the year	79.2	64.3
Dividends	26.4	23.6
Earnings per share	21.97p	17.44p
Dividends per share	7.26p	6.51p

open to us in the changed circumstances. Haig Dimple was also reluctantly withdrawn for the same reasons.

We sought and obtained protective price increases for certain other brands and, while that action, designed solely to protect the export viability of the brands, must virtually price them out of the home market, it is important to stress that there remained available large numbers of Group brands at unchanged prices. The consumer in this market therefore continued to have a wide choice at his command.

Your Board continues to believe that the Company is entitled to the benefit of Article 85(3) for a dual price structure. It has therefore appealed to the European Court of Justice against the decision of the Commission.

### Home sales

Government imposed no further increases upon a level of duty which is already extremely high, at £3.16 per bottle, plus VAT. The Government did not, however, grant any period of credit in respect of payment of duty, in spite of the industry's strong representations. Other alcoholic beverage industries enjoy a period of credit in financing their lower rates of duty.

In spite of the unpalatable actions we have found it necessary to take, we still have in Haig Gold Label and White Horse two of the leading brands in the market; and in Johnnie Walker Black Label the market leader in the de luxe brand sector. Additionally, we launched a lower-priced whisky—The Claymore—and have recently introduced two new brands, John Barr and The Buchanan Blend. The policy of the Company is to maintain a substantial presence in the home market and to earn a satisfactory level of profit there, so long as these objectives can be attained without long-term damage to the Group's strong export performance.

### Continental EEC sales

Direct shipments to EEC markets declined slightly and our accredited distributors faced a particularly disruptive period as substantial quantities of our brands were shipped into their markets by UK wholesalers. Cheap whiskies are a growing feature but Johnnie Walker Red Label continued to be the leader in the standard brand segment and the success of Haig Dimple in West Germany is very encouraging.

### Exports of Scotch whisky

Industry exports of blended Scotch whisky showed a small increase of 1.5%.

However, in spite of the depressed state of many national economies and the proliferation of tariff and non-tariff barriers against Scotch whisky, increased selling prices contributed materially to the growth of foreign exchange earnings.

The US market was particularly weak. Industry shipments were less than 1% ahead. Brands shipped in bottle performed substantially better than those shipped in bulk and Dewar's White Label and Johnnie Walker Red Label continued to strengthen their positions among the top four brands in that category. Johnnie Walker Black Label and Haig Pinch enjoyed good increases in sales. Severe price competition amongst brands bottled in the USA continued but our share of total bulk shipments was maintained.

Your Company's Scotch whisky business with the USA was considerably stronger than the industry trend. Moreover, since Christmas, industry tax payments have improved to give some indication that sales generally may be expanding.

Across world markets, Johnnie Walker further enhanced its success as outstandingly the largest-selling Scotch whisky. In Central and South America Buchanan's De Luxe, Old Parr, Johnnie Walker Black Label, Haig Dimple and Chequers did valuable business. In Africa Johnnie Walker and White Horse remained as market leaders. Through many Asian markets and in Australia and New Zealand our brands met particularly strong price competition but continued to occupy a solid position. In Japan sales of Scotch whisky, including your Company's brands, experienced a quiet year. Nevertheless, our leading brands increased their share of business.

Export prices of our standard and de luxe brands were increased by 10% and 12% respectively in February 1978 and increases were introduced a little later for our secondary brands.

### Gin

Work commenced at Wandsworth Distillery on the construction of a new £4.7 million distillation complex to meet the increasing demand for grain spirit for Group brands of gin. In the UK market Booth's Finest Dry Gin suffered a disappointing reduction in market share, Gordon's maintained its premier position and High & Dry continued to make progress. Further progress was made in export markets, notably in respect of shipments of Tanqueray Gin to the USA and to Canada. However, profitability in these two areas was adversely affected by exchange rates.

Since the EEC Commission's decision last December on dual pricing, the growth of parallel exports of Gordon's in the home trade bottle to Continental EEC markets has been creating an increasingly serious problem for our distributors.

In the USA the gin industry recorded a welcome increase in volume with locally produced Gordon's and Booth's High & Dry participating in this improvement.

### Vodka

Sales of Cossack Vodka were somewhat depressed in the UK. The growth of the vodka market in the USA appeared to be slowing down. Nevertheless, Gordon's Vodka increased its sales.

### Australia

The economic situation in Australia remained difficult. Continuing extremely heavy discounting again made trading conditions confused.

United Distillers Proprietary had to face the severest competition from cheap imported spirits. Nevertheless a small profit was achieved.

Tolley, Scott & Tolley experienced a substantial setback in profitability, largely because of temporary production problems.

### Food group

The Yeast and Food Division made further progress with increased sales and an improvement in profits. Sales from the food factories continued at a high level. Production at the two yeast factories was the highest ever achieved.

A steep rise in the cost of raw materials in the early part of the year, followed by a rapid fall with consequent stock losses, resulted in a small reduction in margins for The Peatless Refining Company (Liverpool) Limited.

### Carbon dioxide

The Distillers Company (Carbon Dioxide) Limited had another successful year, with profits somewhat ahead of last year's very satisfactory level.

The results largely reflect trading in which the level of activity in the main sector of CO<sub>2</sub> sales was very similar to 1976-77. A useful increase in profit was derived from the sale of associated engineering equipment where sales volume, particularly in exports, showed a substantial advance.

### United Glass

Sales were strong in the first half of the year. In the second six months, demand eased and the company was able to rebuild its stocks. Capital expenditure of £9.2 million reflected the continuation of the planned investment programme of recent years.

### Personnel

The Board's sincere appreciation is extended to the Group's employees at all levels without whose efforts and hard work a satisfactory outcome to the year's trading could not have been achieved.

### Future prospects

World demand for our brands continues to be relatively strong and the improving trend noted in the United States is encouraging.

There are inevitably many problems ahead. The effects of our actions in the home market and of the disruption to our distributors from parallel exports cannot at this time be measured accurately. An intensely competitive situation prevails, not only within the industry but in the wider field of alcoholic beverages, and the recent price rises in export markets have had to reflect our judgment of what would be commercially sustainable in the context of a stronger pound as well as our desire to recover cost increases in full.

With net margins consequently under some pressure, I believe I should go no further than to say that there are grounds for viewing prospects for the current year with guarded confidence.

The Distillers Company Limited

The One Hundred and First Annual General Meeting of The Distillers Company Limited will be held at the North British Hotel, Edinburgh, on Thursday, the 14th day of September, 1978, at 12.15 pm.

# S & N will diversify only into proven companies

## Royal up 8.8% so far

BY RAY PERMAN, SCOTTISH CORRESPONDENT

**FUTURE DIVERSIFICATION** by Scottish and Newcastle Breweries will be only into companies with proven record and sound management, Mr. Peter Balfour, the chairman, told the annual meeting in Edinburgh yesterday.

He was answering a shareholder who criticised the losses made on Del Monte Kitchens (now sold), and the French company, Golf St. Cyprien, which is to be disposed of on October 1. Mr. Balfour said that the St. Cyprien leisure and real estate venture was "a mistake for which he and the board accepted responsibility."

"Nothing more would be heard of Del Monte because this was now finished and done with," he said. But the company must diversify, Beer, which provided most of the group's profits, was a mature market in which there were a number of companies competing for the available growth.

In the first quarter of this year beer sales had been disappointing, largely because of the weather. But sales of wines and spirits, trading in managed public houses and hotels, had been satisfactory.

He would not now expect much improvement in the first-half results, but provided there was some reasonable weather and a satisfactory outcome to wage and salary negotiations, he would expect an improvement to the year as a whole.

## Record by A. & J. Gelfer

**FOLLOWING** A small rise from £23,580 to £24,325 at midday, taxable profits of A. & J. Gelfer, maker of men's headwear and scarves, ended the March 31, 1978, year at a peak of £24,325, against the previous year's £23,581.

Turnover improved from £3,13m to £3,54m and net profits were better at £226,688 against £202,207, after tax of £248,198 (£232,614). Earnings per 20p share are 5.25p (4.84p), while the dividend total is stepped up from 2.55p to 2.65p net, with a final of 1.65p.

## John Michael back in profit

The directors of John Michael (Saville Row) consider that the company is returning to a period of steady growth and profitability.

For the year ended January 25, 1978, they report a profit of £72,301, against a loss of £77,250 the year before.

After tax £11,112 (credit £90,907), and extraordinary credits, the net profit comes out at £99,337, compared with £304,298.

The group designs, manufactures and retails menswear, primarily in the UK.

## BOARD MEETINGS

The following companies have notified dates of board meetings to the Stock Exchange. Such meetings are usually held for the purposes of considering dividends. Official indications are not available whether dividends concerned are interim or final and the sub-divisions shown below are based mainly on last year's timetable.

**TODAY**  
Interiors: Benford Concrete Machinery, Pye Holdings, Ward Holdings.  
Funds: Gold Fields of South Africa, Investment Company, Pico, Sirhan Knutson.

**FUTURE DATES**  
Interiors: Elber Industrial, Sept. 13  
Lombard, Sept. 29  
Order Printing, Sept. 29  
Turner (rv. and E.), Sept. 29  
Galen Corporation, Sept. 29

**Financials**  
Aeromarine & Gen. Instruments, Aug. 24  
Austin (Ft.) Lorton, Aug. 24  
British Vending Industries, Sept. 14  
McKay Securities, Aug. 23  
Ranston Furnace Manufacturers, Aug. 24

## £0.3m slip by Reed Stenhouse

**IN THE** nine months to June 30, 1978 Reed Stenhouse earned commission and fees of £33,24m compared with £32,58m and pre-tax profits of £11,23m against £11,53m in the same period last year.

The profits are after interest, dividends etc of £2,59m (£2,25m) and subject to tax of £3,58m (£3,64m). Attributable profit came out at £3,52m (£3,68m) after amortisation of non-completable covenants of £93,000 (£160,000) and minority interests. Earnings per share of the company, which is 54.04 per cent owned by Stenhouse Holdings, are shown at 36.96p (38.16p).

## A. WORTHINGTON

A. J. Worthington (Holdings) has received waivers in respect of 0.47p per share of the recommended final dividend on 300,000 ordinary shares.

## Airfix order books healthy

Current trading conditions at Airfix Industries have improved and the group's order books are in a healthy state, Mr. R. R. Ehrmann, the chairman, tells shareholders.

During the past year, a further £3.5m was invested in machinery and tooling for new products which a tangible indication of commitment to a prosperous future, the chairman says.

It is expected that this investment will consolidate and strengthen the group's position in the market and provide profitable occupation for the factories of

Owing to an agency error, the latter figure was shown as 400,000 shares in yesterday's report.

## Midterm downturn for Evode

**ALTHOUGH** turnover rose from £11.28m to £12.82m, pre-tax profits of Evode Holdings, maker of adhesives and joining compounds, dropped to £310,533 for the 26 weeks to April 1, 1978, compared with £393,331 for the corresponding 27 weeks of 1977-1978. For all that year, a peak of £1.48m was achieved.

First half turnover and profits were split as to: UK, £10,63m (£9,43m) and £357,227 (£701,795) and overseas, £1,99m (£1,53m) and £72,302 (£3,54m) respectively.

In the last annual report, the company indicated that business for the first quarter was difficult and that this was expected to continue into the second quarter. Although, the company's UK business have achieved a marked recovery in the third quarter, which to date is being maintained in the last quarter, its losses in France continue.

The directors report that they are intensifying efforts to deal with this problem as soon as possible, but meanwhile, have made a provision of £250,000 for diminution of value of the investment in its French subsidiary. This amount has been written off reserves.

After UK tax of £192,813 (£276,795) and foreign tax of £5,350 (£8,490), net profits were £10,436 to £111,737 for the period.

The net interim dividend is 0.3625p (adjusted 0.3575p) per 20p share and the directors say they would expect to pay a final of not less than the previous year's 0.745p, adjusted for a one-for-one scrip issue.

Dividend absorbs £22,273 (£51,379), after waivers of £5,487 (£3,325), leaving retained profits for the period at £39,394 (£38,967).

This year's record was achieved despite the adverse movements in exchange rates which cut the underwriting profit by £1.3m over the half year. Investment income growth was also adversely affected by exchange rate movements being £4.1m lower.

Premiums written world-wide by the group were 3.1 per cent higher, but the underlying real growth rate was 10.5 per cent. The group has now become more expensive in outlook now that the business is back on a profitable basis.

Underwriting results in the U.S., the group's major operating country, showed a profit of £0.9m compared with a loss of £0.8m in the first half of 1977. Mr. Daniel Meinerzhagen, chairman of Royal, reports that the underwriting recovery has continued in the U.S. despite the unusually heavy weather losses in the first quarter. There was an increase in profits from property business arising from a lower incidence of claims.

Losses were reduced in automobile, liability and workers' compensation business. The benefit of the corrective action taken a few years ago on automobile business was now coming through in the accounts. The U.S. operating ratio was 98.2 per cent in the period compared with 102.1 per cent in the first half of last year and 99.2 per cent overall for 1977.

The good second quarter

national Incorporated, the U.S. distributor for Airfix and Meccano products, Airfix has increased its shareholding in that company to 37 per cent.

Improved its contribution to the group and was able to expand both its turnover and profits. The development of the Crayon range of household accessories was again a very strong feature. The group has now acquired the outstanding 20 per cent of the capital of Crayon U.S.

Meeting, 17, Old Court Place, W. September 19 at 11 am.

the founders of Ara Inter-

results restored underwriting in the UK to profitability over the first half, although it is still very much below the level of last year. Prior motor business showed marginal loss on the first half and the company announced a 7 per cent average increase in motor premium rates starting in September—12 months after the previous increase. But the majority of the 300,000 motorists insured with Royal will only pay 6 per cent more on their premium—a much lower rise than that being made by other insurers.

A profit on all other classes of business in the UK was recorded except for householders' business which still remains the weak section. However, the situation looked much brighter in the second quarter, but the account still is in loss.

There was a reduction in the underwriting loss in Europe, the improvement coming mainly from better experience in the Netherlands with the benefit of motor rate increases. Underwriting profits continued to be made in Canada, but in Australia resulted in a small underwriting loss. The company is holding tight in this country until conditions improve.

In other overseas areas underwriting results overall were profitable. The interim dividend is stepped up from 6.512p net per 25p share to 7.272p and supplementary payment of 0.131p is to be made following the reduction in A.C.T. Last year a 9.35p final was paid on profits totalling £133.8m.

Premiums written: 1978 1977  
Underwriting profit: 6.4 6.7  
U.S.: 0.9 0.8  
U.K.: 0.9 0.8  
Long term profit: 2.2 1.7

£10m loan from Papua New Guinea Banking Corporation was finalised by the big operation. A loan facility for up to \$80m to be provided jointly by Bank of America and Commonwealth Trading Bank was finalised but so far there have been no drawings upon it. A \$10m loan from Papua New Guinea Banking Corporation was finalised to be drawn in early July.

Although Bougainville is one of the few mines to be still making profits from copper the company with \$142.39 in the same period regards the low level of metal prices as remaining "a source of major concern." Despite the recent improvement, "it is still a little lower than the record

levels achieved in the past six months because of the anticipated marginal increase in the hardness of the ore yielded. But this should be more than offset by the sharply increased gold price and the likelihood of a better return on silver and copper. Bougainville shares rose 2p to 137p yesterday.

**ROUND-UP**  
Copper production at the Kolwezi mine in southern Zaire is reported to be back to 90 per cent of normal, at a rate of 10,000 tons a month. The Sococom company is now again able to fulfil its contracts. The invasion of the Kolwezi area by rebels in May, 1978, brought copper production there to a standstill.

Half-year net earnings of £37.2m (£3.2m) compared with £310.7m (£3.2m) are announced by Canada's Asbestos Corporation. A regular quarterly dividend of 60 cents has been declared.

Canada's Prism Resources has begun drilling on the central zone of its silver-lead-zinc property at Kathleen Lake, 75 miles east of the town in the Yukon. Participants in the venture are Prism with a 25 per cent interest, Stebens Oil and Gas 25 per cent, Chibikana Development 25 per cent, and Esamora Oil 25 per cent.

**MINING BRIEFS**  
ELECTROLYTIC ZINC—PRODUCTION STATEMENT—  
July 28, 1978  
1978 1977  
(£m. in thousands)  
Zinc 13,300 13,700  
Copper 1,300 1,300  
Lead 1,300 1,300  
Silver 1,300 1,300  
Gold 1,300 1,300

After its recent swift climb to record levels in terms of U.S. dollars—the price of gold suffered a sharp reversal yesterday, closing \$44 down at \$208 per ounce following President Carter's decision to seek a remedy for the ailing dollar. The retreat which had begun previously in London prices of South African gold shares accelerated under persistent selling from the U.S., the Continent and elsewhere. Trading Bank long the Cape with the result that the Gold Mines index dropped 8.3 to 187.9.

Further, the mine received lower prices for its copper. But thanks to increased production coupled with a higher price for the important gold by-product, slightly lower costs Bougainville's sales revenue still showed a marginal increase.

Loan repayments of £80.6m were made during the past half-year, and then the Company's nonwealth Trading Bank long loan of \$67.4m (£50.3m) which was part of the original financing for the big operation. A loan facility for up to \$80m to be provided jointly by Bank of America and Commonwealth Trading Bank was finalised but so far there have been no drawings upon it. A \$10m loan from Papua New Guinea Banking Corporation was finalised to be drawn in early July.

As far as the current half-year is concerned, production might be recent improvement, "it is still a little lower than the record

Further growth was achieved by First Scottish American Trust in the half-year to August 1, 1978, with net revenue up from £445,695 to £467,566 after tax of £255,761, against £261,907.

Net asset value per 25p share at half time was 133.5p (112.9p) or 133.5p (112.6p) fully diluted, and the net interim dividend is maintained at 1p. Last time a final of 1.85p was paid from record total pre-tax profit of £0.93m.

Again the cost of the interim payment is £290,044 and the preference dividend £14,700.

**UPPER CLYDE SHIP BUILDERS**  
Mr. Robert C. Smith, Official Liquidator for Upper Clyde Shipbuilders, has revealed that funds push the bank overdraft by year end at £508,554 to £633,116. Fixed assets were higher at £389,019 (£362,140).

The deferred element of the on the 20th of this month.

Expressing confidence that D. F. Bevan (Holdings) will make the year was £102,400 (£111,613) further step forward in the but Mr. Bevan comments that current year Mr. John Wardle, whether or not the comfortable hopes that it accounts next time low actual tax charge position will give members "a pleasant surprise."

Including two months contribution from Leon Berner Group acquired in February, group tax-able profit for the year to March 31, 1978, was ahead to £301,184 (£217,739) on sales of £7,68m (£5,73m) and the net dividend is stepped up to 1.3511p (1.21p) per share—as reported August 1.

Borrowings associated with the liquidation of the bid helped builders, has revealed that funds push the bank overdraft by year end at £508,554 to £633,116. Fixed assets were higher at £389,019 (£362,140).

## MINING NEWS

# Bougainville gains on dollar repayments

BY KENNETH MARSTON, MINING EDITOR

**INCREASED** net earnings of £24m (£17.6m) for the past half-year compared with £13.5m in the same period of 1977 when the year's total reached £28.5m are reported by Bougainville Copper, the Rio Tinto-Zinc group's major copper-gold mine in Papua New Guinea. The 1978 interim dividend is raised to 5 pence (3.7p) from 4 pence; the 1977 total was 8 pence.

The major factor in the past half-year's higher earnings has been the revaluation of the U.S. dollar which provided exchange gains of £3.6m realised on the repayment of overseas loans. On the other hand the new rate of exchange adversely affected sales revenue, which is received in dollars.

Furthermore, the mine received lower prices for its copper. But thanks to increased production coupled with a higher price for the important gold by-product, slightly lower costs Bougainville's sales revenue still showed a marginal increase.

Loan repayments of £80.6m were made during the past half-year, and then the Company's nonwealth Trading Bank long loan of \$67.4m (£50.3m) which was part of the original financing for the big operation. A loan facility for up to \$80m to be provided jointly by Bank of America and Commonwealth Trading Bank was finalised but so far there have been no drawings upon it. A \$10m loan from Papua New Guinea Banking Corporation was finalised to be drawn in early July.

# Royal Dutch/Shell Group of Companies

## Results for First Half 1978

The results of the Royal Dutch/Shell Group of Companies for the second quarter 1978 and the first half year 1978, compared with the corresponding periods in 1977, are as follows:

	Second Quarter 1978		First Half 1978	
	1978	1977	1978	1977
£ million				
Net income before currency translation effects	282	350	568	819
Net currency translation gains (losses) on stocks sold and on monetary items	108	(43)	(172)	(96)
Net income for the period	390	307	396	723

It will be seen from the above tabulation, that the results are considerably influenced by the application of the United States accounting standard on the translation of foreign currencies (FAS 8). As was stated in the first quarter

	SECOND QUARTER 1978		FIRST HALF 1978	
	1978	1977	1978	1977
£ million				
<b>Revenues</b>				
Sales proceeds	7,281	7,145	14,182	14,221
Less Sales taxes, excise duties and similar levies	1,573	1,460	2,956	2,784
	5,708	5,685	11,226	11,437
Other revenues	182	154	321	294
Share of earnings of associated companies	89	86	140	121
Interest income	56	61	106	121
	6,035	5,986	11,793	12,053
<b>Costs and expenses</b>				
Purchases and operating expenses	4,167	4,105	8,382	8,287
Selling, general and administrative expenses	646	608	1,365	1,157
Exploration (including dry holes)	97	102	188	195
Research and development	43	41	86	79
Depreciation, depletion and amortization	168	142	333	283
Interest expense	82	76	161	145
Taxation on income	403	561	819	1,109
Income applicable to minority interests	39	43	63	85
	5,645	5,679	11,397	11,340
Net income for the period	390	307	396	723

Accounting policies for first half 1978 are unchanged from those set out in the Royal Dutch/Shell Transport 1977 Annual Report (page 37).

## \*Parent company share therein:

	per Ordinary Share

## INTERNATIONAL FINANCIAL AND COMPANY NEWS

## Strong showing outside Germany lifts Hoechst

BY GUY HAWTIN

FRANKFURT, August 17.

HOECHST, one of West Germany's "big three" chemical groups, reports an upturn in profits for the second quarter of 1978 and expects the improvement to continue through the rest of the year. Earlier this week the Dutch chemical major Akzo also reported a substantial second quarter recovery.

This is good news for Hoechst shareholders who were given a disappointing report on the first three months' progress at the annual meeting in June. While the statement on the first half of 1978 still shows a decline in overall profit, figures calculated on the basis of a "half-yearly average" show that during the six months pre-tax earnings were

running ahead of last year. Group first half sales this year totalled DM 12.13bn (\$6bn) against DM 11.73bn. This was an increase of 3.4 per cent on a half yearly average of 1977's performance. Profits before tax totalled DM 550m

More International Company News, Page 23

(\$279.5m) down 12.7 per cent on the DM 630m of the opening six months of 1977.

Today's figures show that growth in the domestic market is lagging behind performance

outside Germany. Group domestic sales rose 1.7 per cent—both compared with first half 1977 and a half-year average basis—from DM 3.56bn to DM 3.63bn. Sales abroad, on the other hand, were up 4.2 per cent from first half 1977's DM 7.57bn to DM 8.2bn on a half year average. The group commented that first-half 1978 had brought with it no upward trend in the West European economy, nor, despite increased activity in the U.S., a stabilisation of the economic situation. The report group sales rose in the second quarter of 1978 both in comparison with the first three months of the current year and the second quarter of 1977.

## First half sales rise at BMW

BY OUR OWN CORRESPONDENT

FRANKFURT, August 17.

GROUP TURNOVER of BMW (Bayerische Motoren Werke) for the first half of 1978 rose by 15.7 per cent to DM 3.26bn (\$1.65bn). Volume sales increased by 9.6 per cent to 164,561 units, of which domestic customer took 78,588—5.5 per cent more than last year's first half. The BMW parent concerns'

turnover during the first half rose by 15.6 per cent from DM 2.81bn to DM 2.98bn (\$1.51bn). The main impetus of the expansion came from the foreign market, where sales increased by 22.3 per cent to DM 1.45bn.

The interim report says the

full year will see a further increase in sales and satisfactory profits. This is in spite of the fact that labour troubles in the metal industry at the beginning of the year meant that BMW's motorcycle manufacturing operations failed to equal the production and volume sales levels of last year's first half.

## SKF operating income up

BY JOHN WALKER

STOCKHOLM, August 17.

SALES FOR the Swedish SKF bearings, steel and machine tool group increased by 31 per cent to SKr 4.7bn during the first six months of this year. Operating income after depreciation rose by 9 per cent to SKr 244m. Volume sales increased in all product sectors, particularly in the special steel and cutting tools, together with certain price increases which contributed to the greater turnover. Roller bearing sales rose by 18 per cent, and steel sales by 26 per cent, and cutting tools by 33 per cent.

Operating income was after depreciation of SKr 226m. A "favourable profit development" during the second quarter was influenced by a marked upturn in sales. Measures taken to reduce inventory levels caused further weakening of an already low capacity utilisation in the roller bearing sector. Profits were consequently restricted in this field, which nonetheless continues to generate the greater part of group income. Steel sector losses were reduced considerably compared

with the same period in the preceding year, due to the reorganisation at SKF Steel and increased marketing and other measures. Parent company turnover passed the billion kronor mark for the first time at SKr 1.0bn. Despite Sweden's weak business climate, home sales rose from SKr 245m to SKr 273m. Prospects for the second half of this year for maintaining the improved sales levels are considered good.

## Second tier Dutch banks well ahead

BY CHARLES BATCHELOR

AMSTERDAM, August 17.

THE second tier of Dutch banks traded very profitably in the first half of 1978. Increases in net profit of nearly one-third are reported by Nederlandse Credietbank, the medium-sized commercial bank, and by Westland-Utrecht, the country's largest independent mortgage bank. Profits rose more rapidly than business volume, and the increases were also greater than those recently announced by

Amro, ABN and NMB. Credietbank reported a 28 per cent rise in net profits over the first half of 1977 to Fl 9.5m (\$4.5m) and a balance-sheet total of Fl 8.55bn (\$4.05bn). Gross profits were 29 per cent higher at Fl 26.6m. Fl 81.5m. Revenue was 20 per cent higher at Fl 108.1m. Credietbank transferred Fl 10.1m to its reserves.

Westland-Utrecht's net profit

rose 27 per cent to Fl 23.7m (\$13.6m) in the first half of 1978 compared with the same period of 1977. Operating profit was 9 per cent higher at Fl 58.7m. Net profit in the second quarter Fl 15.5m compared with the same period of 1977. This was after several provisions charged directly against the operating result. The bank's mortgage portfolio rose 13 per cent net to Fl 9.06bn.

## Dutch hopes on Fokker deal

BY OUR OWN CORRESPONDENT AMSTERDAM, August 17.

THE DUTCH arm of the Fokker aircraft group hopes that the MBB, the German Government planned merger between the West German side of the company and Messerschmitt-Bölkow-Blohm (MBB) will be only the first step towards a fully integrated German-Dutch aircraft industry.

MBB now going on between the German Government and Fokker are expected to lead to the Dutch part of Fokker being left with a minority stake in the new German company. The Dutch arm of Fokker will insist on at least a blocking share in the new company.

## GROUPE THOMSON

France's leading group in the fields of professional electronics, household appliances and general consumer products, radiology and medical electronics

## Itoh slips into loss

By Robert Wood

JAPAN's third largest trading company, Itoh, has returned to a net loss of ¥12.3bn (\$65m) for the year to end March, compared with a profit of ¥330m in fiscal 1976.

The result comes on top of setbacks reported earlier this week by two other trading houses, Mitsubishi and Marubeni. The former, Japan's largest trading house, saw profits dip by a third last year, while Marubeni emerged with a more than doubled net loss.

Itoh's sales last year were ¥6.75bn compared with ¥6.5bn. The company blames its 363 subsidiaries for the bulk of the setback, notably To Oil which is 39 per cent owned by Itoh and which dipped into the red on a consolidated basis to the tune of ¥6bn (\$31m).

Trading companies are commission merchants, trade financiers, and organisers of consortia. They have considerable discretion in deciding when to write off debts, and their year-to-year profit trends are not necessarily reliable indicators of their underlying success.

## The oilmen are grappling with many common problems, but their mixed fortunes are best explained by the companies' differing structures and areas of operation

BY DAVID LASCELLES IN NEW YORK

THE GOOD NEWS from the U.S. oil industry is that it reached mid-1978 was that the North Sea and the Alaskan North Slope were at last beginning to make a difference to earnings. But the bad news was that the industry was still beset by a host of uncertainties both political and economic, to which it had to raise production from its Prudhoe Bay reserves to over 200,000 barrels a day.

By contrast, Gulf, which is predominantly in the Middle East, said its first-half earnings were "adversely affected by a sharp decline in foreign crude lift-in." This summer, incidentally, produced two examples of how oil companies propose to use the

## A year of mixed fortunes

BY DAVID LASCELLES IN NEW YORK

largest single investment in Alaska, commented recently that the political disincentives to new investment in Alaska as a result of more and more state taxes and regulations have caused Sohio and other oil companies to be optimistic about future opportunities there. Sohio had hardly uttered these words when Britain announced plans to raise tax on North Sea revenues an idea which, needless to say, the oil companies did not rush to endorse.

The oilmen are grappling with many common problems, but their mixed fortunes are best explained by the companies' differing structures and areas of operation

## Gulf Oil to divert uranium production from Canada

BY DAVID LASCELLES

GULF OIL, which is involved in a complex—and costly—legal wrangle over uranium supplies, has announced that it will divert production from its Canadian mines to meet the needs of its subsidiary General Atomic, which makes nuclear power stations and supplies the fuel to run them.

This company, which Gulf operates as a joint venture with Royal Dutch Shell, is contracted to supply uranium to three utilities, but is unable to meet its commitments in full because its own supplier, United Nuclear Corporation, has halted deliveries while a court investigates its charges that Gulf Oil was operating a uranium cartel.

## Prudential eyeing Japan market

BY OUR OWN CORRESPONDENT

PRUDENTIAL, THE biggest U.S. life insurance company, is considering entering the Japanese insurance market, it disclosed today.

A senior executive would visit the country later this month to explore the potential of the market. The company denied a report from Tokyo that it planned to set up a joint venture with Sony, the electronics concern. But it said it had dealt with the company for a number of years and had discussed life insurance

## Recovery at SCM in final quarter

BY OUR FINANCIAL STAFF

NET income of SCM Corporation, the diversified industrial company whose products include office copiers and Smith Corona typewriters, for the year ended June 30 was \$7.58m or \$4.63 a share, on sales up from \$1.35bn to \$1.51bn.

This is somewhat better than forecast at this half year stage. After a poor first half which saw earnings fall below 1977 levels, the year would still equate last year's record of \$7.41m or \$4.01 a share.

The 1978 figures include a gain of \$2.8m or 30 cents a share arising mainly from the benefits of the disposal of the European copier operations, a gain of about \$1.5m or 11 cents a share on the sale of premises and the favourable settlement of litigation. For the fourth quarter, SCM had net income of \$1.32m or \$0.82 a share compared with \$1.13m or \$0.72 a share. Sales were higher at \$418.4m against \$365m.

**The Republic of Panama**  
U.S. \$70,000,000  
Floating Rate Serial Notes due 1990  
Issue Price 100 per cent.

The following have agreed to subscribe or procure subscribers for the above Notes:

# A spark of controversy holds up Brent

THE JIGSAW pieces of Shell-Esso's massive Brent Field development are finally beginning to fall into place. But as the picture takes shape offshore, the two companies, which together account for nearly 30 per cent of the UK oil reserves now under development, are facing problems onshore, which to date have proved more intractable and frustrating than most of the difficulties they have encountered in the stormy waters of the North Sea.

The Brent Field is the largest oil discovery yet made in the UK sector of the North Sea. It contains estimated recoverable reserves of some 2bn barrels of oil—including 600m barrels of condensate and natural gas liquids—and about 3 trillion cubic feet of gas. At peak production rates it could meet as much as 30 per cent of UK oil consumption and 15 per cent of UK gas consumption.

The field is large by any standards, but the particular combination of hydrocarbons discovered in the Brent province, 100 miles to the north-east of the Shetland Islands, has necessitated an offshore development programme that in complexity rivals any in the world.

It is ironic that Shell and Esso should have run into one of their most time-consuming problems in the whole project onshore in the two small communities living in Aberdeen and Braefoot Bay on the shores of the Firth of Forth.

These two communities live either side of Braefoot Bay, the location chosen by Shell for a marine terminal to service its planned natural gas liquids separation plant at Mossmorran, Fife. The NGL plant and terminal are the piece of the jig-saw located furthest away from the field, but they are a vital part of the overall plan and delays here have repercussions for the whole project.

A planning inquiry was held more than a year ago and Shell had hopes of moving in the first group marked another important milestone last spring. But it could hardly have counted on meeting quite such vehement and articulate opposition as has been offered by local protest groups. Neither could it have foreseen the series of events, some tragic, some farcical, that have occurred since the inquiry embargo, little emphasis was and have served to complicate further the decision facing for use at a later date, by

Mr. Bruce Millan, the Secretary of State for Scotland.

A decision will certainly not be forthcoming before September 4, the day Mr. Millan has set as the deadline for submissions on one of the more esoteric hazards that has emerged in the last 12 months—the danger of sparks from radio signals sent out by nearby radio masts.

Shell received provisional planning permission at the end of March for its NGL plant but it was conditional on the Scottish Secretary receiving further evidence on these hazards. Mr. Millan has hardly been allowed to forget where his responsibilities lie and has already been taken to court once by the objectors in an action to force him to release more information.

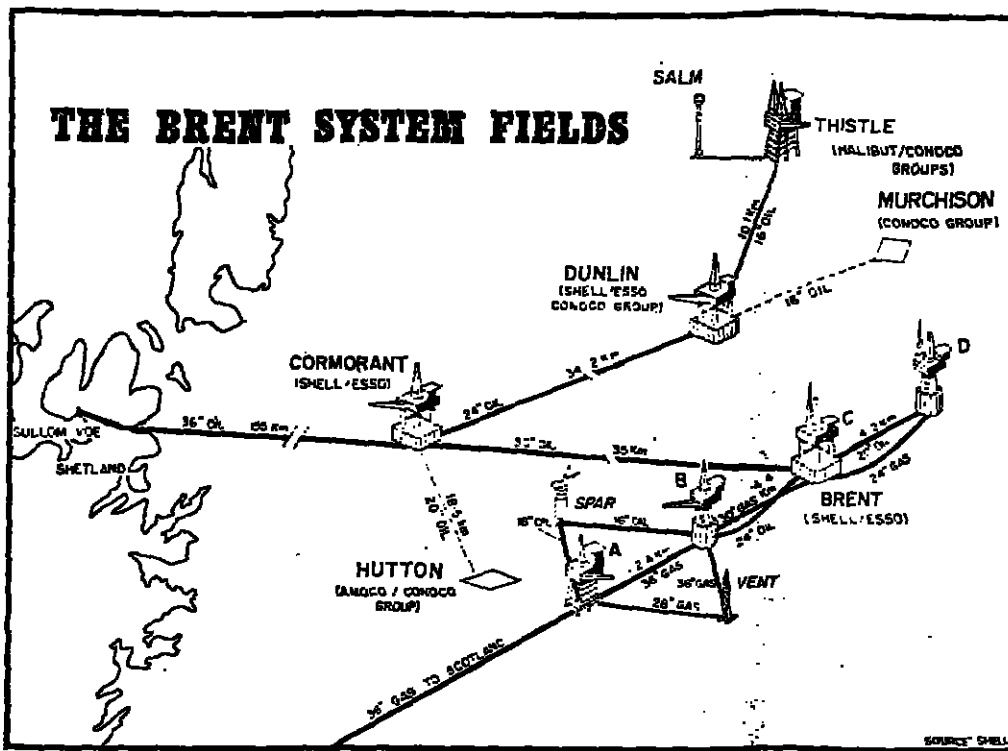

But the Fife plant which will separate the natural gas liquids from Brent into ethane, propane, butane and natural gasoline, is only the final link in a chain that will stretch from the northern North Sea.

The four platforms of the Brent Field form the backbone of a complex pipeline system that will transport oil to Sullom Voe in the Shetland Islands and gas to a reception and treatment terminal at St. Fergus to the north of Peterhead in Aberdeenshire.

## First well

Shell-Esso expects to be ready to start moving the first oil along the 87 mile pipeline to Sullom Voe in mid-October. It will come from another of its discoveries in the area that is tied into the Brent System, the Dunlin Field. Production from the first well on Dunlin began just nine days ago at a rate of about 9,000 barrels a day, but three more wells will soon be on stream.

On the Brent D platform, which began production in November 1977, the Shell-Esso group marked another important milestone last spring. But it could hardly have counted on meeting quite such vehement and articulate opposition as has been offered by local protest groups. Neither could it have foreseen the series of events, some tragic, some farcical, that have occurred since the inquiry embargo, little emphasis was and have served to complicate further the decision facing for use at a later date, by

re-injecting it back into the field.

But in the past two years the stricter line over the wasteful flaring of gas, and Shell has had to shut down important parts of the field for many months while it installs the expensive compression units needed to reinject the gas. The Brent B platform which first came on stream in December 1976, was shut down in June last year and it is unlikely to resume production until next month.

Shell-Esso are spending £15m to £20m on gas compression equipment for each of the four platforms, and the units represent some of the world's most advanced technology in this area. They must take gas being produced from the field at about 2000 pounds per square inch and re-inject it at as much as 6,000 psi to counter the pressure of the gas cap located 10,000-12,000 feet below the seabed.

To date the Brent platforms that have been producing oil have been loading into tankers at the field. But Shell hopes to have at least the pump station on Brent C in operation in the first three months of next year to allow oil to begin flowing for the first time directly from the field into Sullom Voe. Pro-

duction from the C platform itself should begin towards the end of next year.

But it is the gas side of Brent production that is presenting the problems rather than the oil. Brent has one of the highest ratios of gas to oil in the North Sea and for many months to come it is the associated gas that is going to decide the pace at which the oil can be produced.

Shell-Esso have agreed a contract with British Gas to start supplying natural gas (methane) to the gas corporation's terminal at St. Fergus in October 1980. Supplies are supposed to level out at a minimum of 500m cubic feet a day.

But it is with this contract that Shell-Esso faces its most immediate problem as it tries to synchronise the completion of widely differing projects each involving in its own right an investment of several hundred million pounds.

Shell's gas terminal at St. Fergus is already under construction. Costing at present estimates a little over £100m it should be ready by the middle of 1980.

This plant is designed to take out the natural gas stream for use by British Gas, allowing the remaining gas liquids to be piped south to a separation plant in Fife. Here the ethane stream would cross a boundary fence to a petrochemicals plant proposed by Esso Chemicals. The propane and butane streams, which should find ready customers in the fuel markets of Western Europe and North America, would be moved by a short pipeline to a marine terminal at Braefoot Bay.

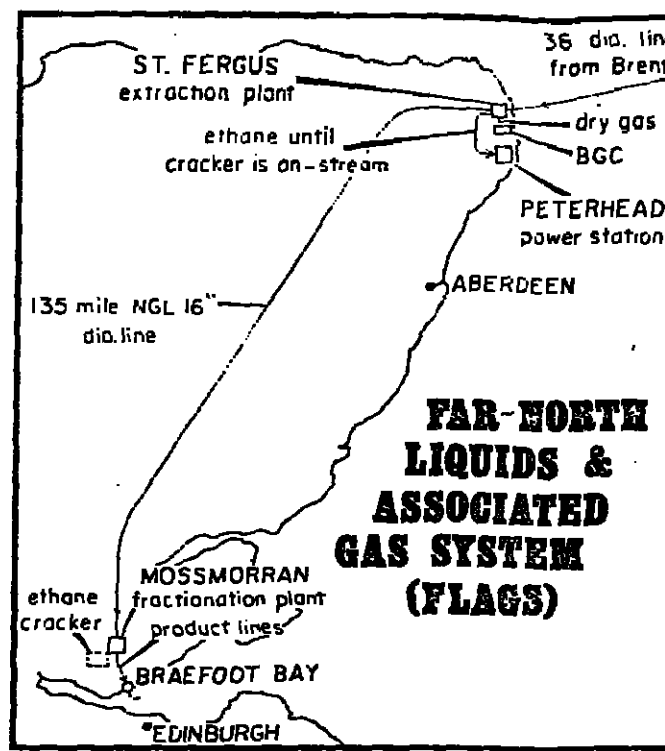

But the residents living around Braefoot Bay object.

They refuse to accept that a terminal for the shipment of potentially dangerous substances such as liquid petroleum gases (butane and propane) and liquefied chemical gas (ethylene) should be built within 14 miles of their homes.

Acceptable

They refuse to accept the evidence presented by Shell, Esso, Esso Chemicals, the Health and Safety Executive and various engineering consultants that the plants and terminal will be built to the very highest safety standards and will meet all standards of "acceptable risk."

The local residents suffered a defeat at the public inquiry held in July last year. But when belatedly the Secretary of State gave his verdict at the

end of March he granted only provisional outline planning permission.

Since the inquiry new worries had surfaced. An embarrassed Government was told that its 8m Royal Navy transmission station newly built at Crimond with financial aid from its Nato allies, could be a potential hazard to the nearby St. Fergus gas treatment plants. Transmissions could cause sparks that might ignite any leaking gas.

If this was the case at St. Fergus, why not in Fife? The objectors soon discovered a nearby transmitter operated by the local radio station, Radio Forth. Mr. Millan was forced to call for a report from the Health and Safety Executive, similar to the one planned for and other reports were commissioned by Shell, Mr. Millan was inclined to keep this last report to himself, but the have been modified in the light of the accident.

Since then a series of road and rail disasters in the U.S., Spain and Mexico have emphasised to the public the dangers that can exist from the movement of liquefied petroleum gases. No road or rail transport links are planned for Fife, but the disasters could help the protesters' case.

But above all the action planning permission could actually be refused.

months later along with the HSE report on radio transmissions and were set a deadline of replying by September 1.

Mr. Dick Mehta, co-chairman of the Aberdeen and Dalgry Bay Joint Acting Group, said yesterday that such a deadline is unacceptable. The group had asked Mr. Millan for an extension. But if it was not granted, he said, they would return to the courts to seek a further injunction.

But apart from the diversion over radio sparks there have been other developments, which must be deeply worrying the oil companies, however indirectly they relate to the Fife project. In the early summer of 1977 a natural gas plant exploded in the Middle East.

Designs for the Fife plant report to himself, but the have been modified in the light of the accident. Since then a series of road and rail disasters in the U.S., Spain and Mexico have emphasised to the public the dangers that can exist from the movement of liquefied petroleum gases. No road or rail transport links are planned for Fife, but the disasters could help the protesters' case.

But above all the action planning permission could actually be refused.

from the U.S. this week which it is using as a basis to call for the re-opening of the public inquiry.

The full 1,800 page report will be delivered to Mr. Millan next week, but he has already received extracts. It was prepared by the General Accounting Office, a U.S. Government agency, which investigates the Government's performance on behalf of Congress.

The report concludes: "Liquefied energy gas risk assessment studies have not reached a stage where they give confidence in their conclusions. Therefore safety decisions cannot logically be based on them. . . . Regulators will have to attempt to make timely, prudent sitting and other critical judgments with the realisation that many important safety questions cannot yet be answered with confidence." No new liquefied gas projects should be allowed except in remote areas, says the report, because the U.S. Government does not yet have the knowledge or competence on which to base a decision.

## Middle stages

Meanwhile Shell-Esso can only wait, caught up in the middle stages of a project vital to the U.K.'s future energy needs and involving an investment at the last count of some £3bn.

The delay at Mossmorran already means that Shell-Esso will not get the early gas sales they had been banking on. Worse, however, it means that gas re-injection will have to be increased at the field, which could have had effects on the oil reservoir. A certain amount of gas can be re-injected without difficulty, but if the process is prolonged a vicious circle begins whereby more and more gas will be produced along with the oil, slowing oil production and calling for more and more gas to be re-injected.

This process could have a severe effect on production forecasts. How soon it would begin to bite is uncertain. But it is an important factor that the Brent partners must be considering as they endure the growing delays and ponder "the unthinkable" that the planning permission could actually be refused.

# Albright & Wilson

## 1978 HALF YEAR RESULTS

Profit before tax for the first six months of 1978 was £18,808 million compared with £16,135 million in the corresponding period of 1977. The 1977 figure was arrived at after deducting £0.9 million arising on conversion into sterling of overseas net current assets; no such adjustment for this factor was required for the first six months of 1978.

Substantially higher profits were reported from Canada where the Long Harbour phosphorus plant performed well and produced better results than in the first half of 1977 when only one furnace was in operation. The Pulp and Paper Chemicals Sector produced good results with markets being strong. Elsewhere overseas, profits were similar to those for the first half of 1977.

U.K. profits were adversely affected by poor demand, particularly in export markets, and by labour difficulties. However, the fertiliser business showed improvement over the unsatisfactory result of the

first half of 1977 and the Flavours Sector produced increased profits.

The capital expenditure programme continued to accelerate with £19 million being spent in the period compared with £9.5 million in the first six months of 1977.

As already announced, Stockholders approved a Scheme of Arrangement at meetings held on 7th August whereby Tenneco International Holdings Limited will acquire the Ordinary and Preference Stock of the Company not already owned by Tenneco. Under the provisions of the Scheme the Ordinary Stock being acquired will not be entitled to any further dividends. In the circumstances no interim dividend has been declared.

The unaudited results of the Group for the first six months to 28th June 1978, together with comparative figures for the first and second halves of 1977, are shown below:-

	1978 £'000 1st 6 months	1977 £'000 1st 6 months	1977 £'000 2nd 6 months
Sales	177,195	165,141	172,866
Profit before taxation	18,808	16,135	19,283
Taxation	8,186	7,610	8,787
Minority interests	295	246	634
Preference stock: Dividend	62	62	61
Profit attributable to ordinary stockholders before extraordinary items	10,264	8,217	9,801

### NOTES

1 Taxation for the first six months comprised:  
Group: U.K. £4,550,000 (1977: £4,679,000)  
Overseas: £3,298,000 (1977: £2,692,000)  
Associates: £338,000 (1977: £239,000).

2 No extraordinary items arose in the first six months of 1978 (1977: £1,078,000).  
3 No interim dividend has been declared on the Ordinary Stock of the Company (1977 interim: 2.0p per Stock Unit; £2,350,000).

## Take a ride on success. It's a continuing story.

The only meaningful compliment that matters to us is continued passenger support and patronage. In the last 5 years we have averaged an annual passenger growth of 32% as compared to 7% achieved by the airline industry.

A four-fold increase in passengers in 5 years on our network of 60 cities in 4 continents.

PIA is grateful for your patronage.

Great people to fly with.

# A legal catch for those dealing with the state trading countries

WHEN STANDARD forms of contract developed in trade between free market economies are used for transactions with state trading organisations, they may give rise to problems. Whether the organisations form part of the governments or are separate legal entities, there always exists a special relationship between them, and it may call for special provisions in contracts.

One such problem formed the subject of an article in which the FINANCIAL TIMES Legal Correspondent, on July 13, discussed the apparent implications of the recent decision in *Czarnikow v. Rolimpex*. Briefly the outline facts and issues were as follows: In 1974 Rolimpex, a Polish state trading organisation, concluded a number of important export contracts for the sale and shipment of sugar from Poland. All the contracts incorporated the Rules of the Refined Sugar Association which contain force majeure exceptions including prevention by "government intervention". They also provide that the sellers are to be "responsible for obtaining any necessary export licence," and

that in the event of a failure to do so they could not rely on force majeure.

Rolimpex duly obtained the necessary export licences in the usual way. However, there was then a period of heavy rain and flooding in the sugar beet producing areas which destroyed much of the crop and left too little for domestic consumption. On November 5 the Council of Ministers thereupon promulgated a decree signed by the Prime Minister which banned all imports of sugar with immediate effect and cancelled all existing export licences. The circumstances in which this decree was made are important and are mentioned below.

Rolimpex was unable to fulfil its commitments and claimed intervention. The losses to its customers have been estimated at £40m to £60m. The Czarnikow contract was referred to arbitration, more or less as a test case, to a panel of five trade arbitrators from Britain.

Czarnikow maintained that (a) as a state trading organisation Rolimpex could not rely on "government intervention," and (b) it had in any event

failed "to obtain the necessary export licences." The arbitrators rejected both contentions and awarded in favour of Rolimpex. Czarnikow then appealed under the "Special Case" procedure which empowers the courts to overrule arbitrators on points of law. The case came before a High Court judge of the Commercial Court, then three members of the Court of Appeal, and finally five Law Lords. All nine of them agreed with the arbitrators on point (a): all but two—one in the Court of Appeal and one in the House of Lords—also agreed on point (b).

The FINANCIAL TIMES Legal Correspondent expressed understandable disquiet about the apparent implications of the case in relation to East-West trade, particularly in the context of point (a). The object of this article is to place the grounds of the decision in perspective and also to draw attention to certain other considerations which should be borne in mind for the future.

1. As the Legal Correspondent forcefully pointed out, for a state trading organisation within a Comecon state to be able to

rely on government intervention as an excuse for non-fulfilment of its contractual obligations appears at first sight to be an obvious anomaly with dangerous implications. For obvious reasons it cannot normally be a sufficient answer to say that, as in this case, the organisation is

technically a legal entity separate from the state. What matters is the reality.

In the present case, however, the facts found by the trade arbitrators were exceptional, and the courts were of course bound by the arbitrators' findings. In brief, the position was as follows. Czarnikow understandably contended, in the words of Lord Wilberforce, "that there was some kind of collusion or conspiracy between Rolimpex and the Government by which the Government was persuaded, in the interest of Rolimpex, to impose the ban."

This was wholly rejected by the arbitrators after a full investigation of the contemporary documents and hearing many

witnesses. Indeed, they were satisfied that Rolimpex had established the contrary.

To preserve its reputation in the trade Rolimpex had been anxious to perform the contracts, either by the delivery of home-grown sugar or by the tender of alternative supplies from the world market. The

Director and General Manager of Rolimpex protested against the proposed ban and subsequently expressed his formal regret to the customers. The Minister of Foreign Trade and Shipping, which supervised Rolimpex, supported his protest.

But other ministers opposed him on the ground that it was unacceptable to put the people of Poland on short rations and that the expenditure of foreign currency was also unacceptable. The Council of Ministers was split, but decided to impose the ban without any further consultation with Rolimpex and against its will.

The arbitrators found expressly that "the persons employed in Rolimpex did not

induce the Council of Ministers to authorise the ban and did not influence its continuance or effect." They also found that "Rolimpex is not so closely connected with the Government of Poland that it is precluded from relying on this ban as 'government intervention'." On

these exceptional facts it was unanimously held by the arbitrators and the courts that the defence of "government intervention" had been established.

2. The issue raised by point (b) concerning the export licences is more arguable, but really subsumed by the main issue. The majority view was that, since Rolimpex had in fact obtained the export licences which were required under the existing licensing system, it had discharged its obligation "to obtain the necessary licences" notwithstanding that the Decree of the Council of Ministers not only banned the exports, but also formally cancelled the pre-

viously granted licences.

It was held that much stronger words would have been required than "obtain the necessary licences" to produce effect of an absolute guarantee that they would not be revoked by a total ban on shipments.

3. What of the future, if similar exceptional cases are to be avoided? One obvious solution appears to be to exclude either to perform it or to pay "government intervention" and damages. In theory even such anything similar from the scope of a contract could subsequently be nullified by supervening force majeure defences in all contracts with state trading organisations. An ancillary means would be to strengthen the obligation concerning export licences by a provision to the effect that their continued validity is guaranteed up to the point of shipment. No doubt both these points are already under consideration.

However, it would still be questionable whether they would go far enough. The law is that, if fulfilment of any contract becomes illegal, and therefore impossible, by the law of the country in which any material act of performance is done, then the contract is void and the parties are released from further performance. This issue did not arise in the Rolimpex case, but it is a well known principle in similar circumstances with state trading organisations that the contract is modified to exclude express defences such as "government intervention." The only possible answer would be the imposition of some absolute obligation in the contract to perform it or to pay damages. In theory even such a contract could subsequently be nullified by supervening force majeure defences in all contracts with state trading organisations. An ancillary means would be to strengthen the obligation concerning export licences by a provision to the effect that their continued validity is guaranteed up to the point of shipment. No doubt both these points are already under consideration.

## BY A LEGAL CORRESPONDENT

## ANNUAL REPORT 1978

**Rolaprint** —the International

Company serving the widest range of small offset lithographic printing and duplicating machines, reprographic equipment and consumable supplies—announces its results for the year ended 1st April 1978

★ SALES—U.K.	£8,256,000
—Exports	£4,611,000
★ GROUP PROFIT (after tax credit £27,000)	£340,000
★ FINAL DIVIDEND (1977-1.6472)	1.8119 pence
★ EARNINGS per ordinary share	6.56 pence

### United Kingdom Sales

A turnover increase of 25% is considered satisfactory when judged against the low level of the economy. Deliveries of machines rose by almost 10%.

### International Sales

Export achievement reflected the economic difficulties experienced by a number of countries. Recovery in the current year is anticipated. If the promised economic policies stimulate world trade.

### New Products

Two products—one in the new and growing field of word processing and the other in the automatic production of offset printing plates—have been added to the product range.

### Word Processing

A new word processor (TEXXETTA), with sophisticated features introduced for users at the more advanced end of the market. The first installations were made in the last quarter of 1977.

### Camera/Platemaking

The exclusive selling rights in the U.K., Europe, the Middle East and Africa of a very advanced electronically controlled camera/platemaker (the Electromaster AP11) have been acquired. It has considerable customer appeal and will add substantially to sales of consumable supplies.

### New Factory Operation

The Washington (Type & Wear) operation has continued to expand.

### The Future

The emphasis falls very strongly on the need to control manufacturing costs at levels to meet foreign competition. The issues are straightforward. Inflation is the overriding factor and it is vitally important to arrive at wage settlements which allow the company to remain competitive, thus maintaining full production and full employment. Given a fair wind, we will have a successful 1979.

A.G.M. 18th August at: Rotaprint House, Honeypot Lane, London, NW9 9RE

## THE FIRST SCOTTISH AMERICAN TRUST COMPANY LIMITED

### INTERIM STATEMENT (Unaudited)

For the six months ended	August 1 1978	August 1 1977
Gross Revenue	1,030,363	955,105
Deduct:		
Interest	267,820	238,336
Expenses	39,218	39,167
Taxation	255,761	261,907
	467,566	445,895

An interim dividend of 1p on the Ordinary Shares (same as last year) has been declared payable on 2nd October, 1978, absorbing, together with the half-year's Preference dividend paid on 1st August, 1978, a total of £304,744.

	Valuation of Net Assets including dollar premium	Net Asset Value per Ordinary 25p Share (fully diluted)
August 1 1978	£47,894,458	135.8p (133.5p)
February 1 1978	£39,480,039	106.9p (107.1p)
August 1 1977	£41,352,145	112.9p (112.6p)

# Possibility, proof, Columbus & NEC

Many clever people in 1492 entertained the possibility that the world might be round. But Columbus took the first important steps to prove it.

And on October 10th, 1977, NEC provided dramatic proof

before engineers, scientists and

communication specialists from over 80 nations of what they all knew

was possible. At INTELCOM 77 in Atlanta, U.S.A., NEC was the first

to actually send color TV images, voice, data and facsimiles across the

ocean via a single phone cable and INTELSAT's Pacific Ocean Satellite.

The experts were impressed that NEC activated its Tokyo computer

from Atlanta, had Atlanta inputs

processed in Tokyo with the results

printed out in Atlanta. And NEC made

all its own hardware—computers,

phone switching systems, facsimiles,

and Telephone Video Systems.

There's more.

NEC even makes every level of communication facilities,

including vital parts of the world's earth stations and international

satellite networks. Yes, on October 10th, 1977, suddenly it was

clear: no other company in the world today has proven

such four-fold international communications

capability, proven that the technology of

tomorrow can be

here much sooner

than some people might think.

Spreading the word to the world.

## INTL. FINANCIAL AND COMPANY NEWS

## New owners for Gretermans

BY RICHARD ROLFE

JOHANNESBURG, August 17.

CONTROL OF Gretermans, whose annual sales group, the largest retail chain run at over R750m and whose South Africa, has passed from the Herber family to a consortium dominated by Afrikaans, is a move, foreshadowing a new era in the business of retailing for the first time.

Mr. Norman Herber, the chairman of Gretermans, has sold his master company, Griffon Holdings, to a consortium consisting of his cousin, Mr. Lawrence Herber, the Afrikaans group, Federal Chemicals, a pharmaceutical group, and a consortium of Messrs. Kaye and Miller, forgers of the local, international, and national. The deal, Griffon held 50 per cent of another listed company, Gresham, and the two

between them controlled 50 per cent of Gretermans voting shares, equivalent to just over 20 per cent of the total equity. Griffon is now selling its 50 per cent of Gresham to Mr. Norman Herber, who in turn is selling Gresham's 12 per cent of the Gretermans voting shares to the new consortium. The new consortium has acquired control of Griffon and is offering 90c per share to the side shareholders compared with a price before the bid of 55c. The upshot of the deal is that the new owners will now be in control of the Gretermans' profit record has been patchy in recent years and shareholders will now be hoping that the new controllers will be able to improve the group's performance.

Gretermans controls 10 department stores, about 35 shops under the Ackerley banner and his interests in Gresham as a listed vehicle, but not in the Checkers supermarkets chain, the largest in the Republic of South Africa, with 153 stores.

## Marra returns to profits

BY JAMES FORTH

SYDNEY, August 17.

ARRA Developments, the company, Scottish Australian Holdings, has turned to the dividend list. The company declared a net profit of A\$1.7m (US\$1.98m) for the year to June compared with a loss of A\$2.3m (US\$2.7m) in 1977. The company has been beset by disputes between the directors and a group of shareholders in recent years of selling many of the company's pastoral properties.

The directors maintain that the company is needed to place Marra in a position where it will be able to redeem A\$14.8m in convertible preference shares issued in the takeover several years ago of another pastoral

company, Scottish Australian Holdings. Borrowings to fund the takeover were behind the group's difficulties in the following years.

Dividends on the preference shares are A\$3.64m in arrears. The directors have decided that the profit justified paying a half-yearly dividend of 1.75 cents a share on the ordinary dividend of 1.75 cents a share. A dividend of 0.75 cents a share on the preference shares will now be paid.

During the year six pastoral stations were sold and the proceeds were largely responsible for the extraordinary profit of A\$400,000.

## Downturn at Hooker

BY OUR OWN CORRESPONDENT

SYDNEY, August 17.

HOOKER Corporation, the property group, suffered a 3.5 per cent fall in earnings, from A\$7m to A\$6.8m (US\$7.94m) in the year to June 30 after an increase in costs resulting from a decision in March last year to write off some holding charges, mainly potential land developments, which were previously capitalised. The dividend is held at 7.5 cents a share.

The current year had commenced strongly and the directors considered that a satisfactory overall result could be achieved for the year, and thereafter.

Hooker's contingent liabilities for guarantees to joint venture partners and lenders were reduced during the year from A\$121m to A\$100m. The directors said that no overall loss was expected from these contingencies.

Profits from general operations rose by A\$6.5m to A\$34.4m. The net result was affected by the Head Lease and like contingencies increase in the provision for costs, from A\$2.5m to A\$3.0m, and a A\$6.7m increase in holding charges written off.

In addition to net earnings deferred revenue profits totalled A\$9.2m at June 30 compared with A\$9.8m a year earlier. Deferred revenue mainly relate to the sales of trading stock on account as buyers discharge in terms with profits brought to cash their contractual obligations.

## Dollar reacts in New York

NEW YORK—The dollar rose sharply during somewhat nervous morning trading in response to President Carter's request for recommendations of policies to help the U.S. currency. However, the dollar ran into a new snag after the President's news conference, which was to give the reassurances of firm action the market had been hoping for. Closing price against the West German Mark was DM 1.9650 on Wednesday, down from DM 1.9600 on Tuesday. The dollar fell 0.0050, or 0.25 per cent, to 1.9600, against the yen 118.50 and against sterling 2.2650 (unchanged).

The pound's trade-weighted index, as calculated by the Bank of England, fell to 62.5 from 62.8, after standing at 62.4 at noon and in early dealings.

FRANKFURT—The dollar rose to DM 1.9775 against the dollar at the closing, compared with DM 1.9650 previously. The Bundesbank did not intervene. The dollar's improvement followed the announcement by the Swiss Government that the central bank would be asked to examine measures to stop the inflow of foreign capital into the country.

MILAN—The dollar rose sharply against the lira at the closing, on expectations of measures by the U.S. to support its currency. This ended a series of sharp falls by the dollar, as it climbed to L.815.25 against the lira from Wednesday's 25-month low of L.822.95. The Swiss franc fell against the lira, following indications that the Swiss central bank is prepared to maintain high market liquidity to curb the appreciation of the franc.

PARIS—The Swiss franc and Japanese yen lost ground against the French franc following the Swiss announcement about the dollar. The Swiss franc fell to FF 2.2650 against the French franc, down from FF 2.2745 earlier in the day, and compared with FF 2.26 at the closing on Wednesday. The dollar maintained its overnight gain, standing at FF 4.2790 against the franc, up from FF 4.2700 earlier in the day, and FF 4.2650 on Wednesday. Apart from the weakness of the yen, most other major currencies, including the Japanese yen, before finishing at Y185.47 against the Japanese yen, were fairly good, but yen trading remained very nervous on Wednesday.

Government about looking at improving measures to keep foreign funds out of the Swiss market. Even though the Swiss authorities ruled out any possibility of a dollar swap, the dollar remained firm throughout.

The dollar touched a high point of \$1.9650 against the Swiss franc, before closing at \$1.9600, compared with \$1.9575 previously. It rose to \$1.9625 at the closing, up from \$1.9575 on Wednesday. The dollar's recovery was mainly due to the sale of trading stock on account as buyers discharge in terms with profits brought to cash their contractual obligations.

The following annual rates were quoted for London dollar certificates of deposit: One month 8.50 per cent; three months 8.50-8.75 per cent; six months 8.50-8.75 per cent; one year 8.50-8.75 per cent.

Long-term Eurodollar deposits: two years 8.50-8.75 per cent; three years 8.50-8.75 per cent; four years 8.50-8.75 per cent; five years 8.50-8.75 per cent; ten years 8.50-8.75 per cent.

Short-term rates are call for Sterling, U.S. dollars and Canadian dollars; two days' notice for all other currencies. Asian rates are closing rates in Singapore.

## INTERNATIONAL MONEY MARKET

## New York rates firmer

Federal funds touched 8 per cent in early trading, before easing to 7 1/2 per cent, compared with 7 per cent on Wednesday. The target rate of 7 1/2 per cent, compared with 7 per cent on Wednesday, follows recent speculation that the Fed may have raised its target rate to 7 1/2 per cent, and that an increase in the discount rate from the present 7 1/2 per cent to 8 per cent of U.S. rates is the recent weakness of the dollar, and indications that the Administration is looking for ways to help the dollar.

Treasury bills were firmer for the longer term, with 13-week periods, one-month money was unchanged at 6 1/2 per cent, and three-month money was unchanged at 7 1/2 per cent. Six-month money was unchanged at 7 1/2 per cent, compared with 7 1/2 per cent on Wednesday. Six-month money was unchanged at 7 1/2 per cent, compared with 7 1/2 per cent on Wednesday. Six-month money was unchanged at 7 1/2 per cent, compared with 7 1/2 per cent on Wednesday.

## UK MONEY MARKET

## Exceptional assistance

Bank of England Minimum Lending Rate 10 per cent (since June 8, 1978).

Day-to-day credit in the money market was in the balances, which were not as large as may have been expected by the market was also helped by a slight fall in the note circulation. These factors were very much offset by a substantial net discount houses, and a small amount of Treasury bills, resale to the market of bills the Bank of England also lent a bought previously by the authorities, a modest number of maturing Treasury bills held by the authorities, and a sizeable excess of revenue payments to the Exchequer over Government disbursements.

Rates were fairly firm throughout, with discount houses paying near to 15 per cent, some day-to-day secured money, while closing rates were in the region of 8 per cent.

## FARMING AND RAW MATERIALS

## Quality milk boost urged

QUALITY MILK Producers, the representative body of Guernsey and Jersey milk producers in England and Wales, has urged qualified approval to the strategy report for the UK dairy industry published last week by the Centre for Agricultural Strategy at Reading University.

Although endorsing the main objectives of the report, Quality Milk expressed reservations about some of the more radical solutions proposed.

"The report does not place enough emphasis on the changing patterns of the dairy market in this country, nor indeed in the EEC as a whole," the group said yesterday.

"We are now faced with a milk market in which only 50 per cent of production is used for liquid consumption and of the rest the strongest demand is for cream or butter."

"Yet the producers whose milk is of relatively greater value to the cream or butter manufacturer, receives exactly the same payment as his neighbour, whose milk may be that much lower in butterfat content."

It was vital that the industry reconsider the basis of payment for milk so that it provided an incentive for the farmer to increase his income without necessarily boosting his yield.

The alternative was that the industry would continue on the present path of increasing production, increasing the ever-growing surplus of skimmed milk powder.

If the correct incentives were provided for both the dairy farmer and dairy products manufacturer, there would be no need to impose the radical breed constraints or legislation to tinker with the liquid milk standards as suggested in the report.

## Herring fishing faces 28% cut

BY RICHARD MOONEY

FURTHER UNILATERAL measures are to be taken to protect U.K. herring stocks, Mr. John Slikin, the Fisheries Minister, announced yesterday that a 28 per cent cutback in the Irish Sea catch will be enforced from August 21.

This follows the decision in July to ban all direct fishing for herring off the West Coast of Scotland (with the exception of the Clyde catch) in an attempt to save the fishery from commercial extinction. Britain's North Sea herring fishery was closed in February 1977 for the same reason.

The latest measures will aim to reduce the Irish Sea herring catch to 9,000 tonnes a year from 12,500 tonnes as recommended by the International Council for the Exploration of the Sea's advisory committee on fisheries management in May.

Mr. Slikin said he had raised the problem of overfishing of Irish Sea herring at the last meeting of the EEC Fisheries Council, but the other member states would not agree to take action.

"I am determined that the Irish Sea herring fishery should not go the way of the other herring fisheries round our coasts," he declared.

The catch reduction will be enforced through a vessel licensing system administered jointly by the U.K. and Manx Governments.

U.K. and Manx fishermen, who traditionally take about 90 per cent of the area's herring catch, will be licensed to catch a maximum of 8,100 tonnes in the current season, leaving only 900 tonnes for other EEC countries.

Apart from the Manx fishermen, the area is mostly fished by Scottish vessels, plus some English and Irish, and a few Dutch and French.

The Government plans to close the fishery no later than September 25 and will not re-open it before the end of the year.

The British Fishing Federation yesterday welcomed the move, which it saw as "very necessary." But an official said he wondered whether the Irish Government would be able to control its fishing operations and marine scientists it has been decided to increase the daily mackerel catch limit off the West Coast of Scotland to five tonnes per crew member, from 3.5 tonnes. This results from scientific advice that the stock can sustain a higher exploitation.

## Zaire copper curbs to end in October

BY JOHN EDWARDS, COMMODITIES EDITOR

ZAIRE IS lifting its 50 per cent cutback in copper deliveries from October onwards, Sozcom, the Zaire metals marketing company, confirmed yesterday.

In a statement from Brussels, Sozcom said that in view of the present situation and the outlook for copper production by Gécamines, the Zaire metals marketing company would allow the force majeure imposed in July after the invasion of the Shaba province to be removed.

On Wednesday it was claimed that output at the Kolwezi mines had been restored to above 700 levels, prior to the invasion.

This swift conclusion of the intention to boost Zaire shipments again came at a time when the market was already under pressure from a lower trend in New York overnight.

The fall in gold and general currency confusion.

London silver, and platinum, prices were also lower following a downturn in gold.

The spot price for silver on the London market was cut by 28.5p to 238.1p an ounce, and free market platinum lost \$2.45 to \$137.30 an ounce. It reached a record high of \$140.10 on Monday.

However, one market to rise yesterday was tin. The three months quotation reached a new peak for the year of \$6,800 a tonne at one stage before profit-taking sales brought it back to close \$35 higher at \$5,762 a tonne.

The further rise reflected the strong tone in the Panama market overnight where the Straits tin price climbed by \$M25 to \$M1,810 a picul.

## Coffee frost damage reassessed

By Our Commodities Staff

THOUGH THE immediate frost damage to Brazil's coffee crop seems to have passed, new assessments of the damage done boosted prices on the London futures market yesterday.

November coffee climbed to \$1,349 a tonne at one stage and ended \$44 up on the day at \$1,393 a tonne.

An estimate by Sr. Camillo Calazans, president of the Brazilian Coffee Institute, on Wednesday that 3m to 4m bags (80 kilos each) of coffee had been lost from next year's crop had originally been dismissed by most London traders as a gross exaggeration. They thought the frost had cost Brazil 1m to 1.5m bags.

Yesterday, however, local reports indicating genuine damage in Sao Paulo and Minas Gerais, as well as Paraná, led many dealers to concede that Sr. Calazans may have been right after all.

Meanwhile the Brazilian Weather Office has kept its frost warning in force though admitting that the possibility is remote. Temperatures in the three coffee states are expected to remain below freezing for a few days, sources said yesterday.

From Mexico City Reuters reports: Mexico has raised its minimum export price for coffee to \$140 per 100 kilo bag from \$135. A Coffee Institute official was unable to say whether there might be further changes in the price this week. Earlier this week the price was raised from \$130 per 100 kilos.

## Wheat crop also hit

RIO DE JANEIRO, August 17. PROSPECTS FOR maintaining Paraná's wheat crop at last year's level of 1.2m tonnes have suffered significantly from the frost, according to State Agriculture Secretary Roberto de Souza.

Most of the state's wheat was already at a sufficiently advanced stage to be prone to frost damage, he said.

The Rio Grande do Sul secretariat has not received any report of frost damage to wheat, however.

There has not been time yet to estimate percentage losses, but the initial survey shows the important Cascavel region in the south-west was worst hit, while seed farms in the north and west were also damaged.

Rio Grande do Sul and Paraná together normally account for about 90 per cent of Brazil's wheat crop.

## UK AGRICULTURE

## Small even more beautiful

BY JOHN CHERRINGTON, AGRICULTURE CORRESPONDENT

ONE OF THE most successful young farmers I know told me the other day that he was looking to a thorough shake out of farming, a result of which he would be able to establish himself on a much bigger acreage.

He was saying in effect, that the cyclical nature of farming would reassert itself. There would be some sort of slump which would give him, and others like him, their chance as has always happened throughout history.

His analysis, of course, was entirely correct. But he left out of account Britain's membership of the European Common Market, which is effectively insulating UK farming from what is going on in the world at large. It is true that, thanks to the operations of the monetary payments, prices in Britain are not as high as in some other member countries, such as Germany or France.

But even so they are a long way above those which farmers would have had to face if they were not in the world price basis the farming slump could be here already.

So I believe that my young friend will have to wait a long time before costs catch up with prices, sufficiently for British farmers to abandon their holdings. However, there are already some signs of stress. At the recent annual meeting of the Milk Marketing Board, Mr. Anthony Rosen, managing director of Fountain Farming, which milks large numbers of cows, complained that dairy farmers are facing a serious cash flow shortage. He received little support.

port from the floor, but I believe he has a valid point.

Most dairy farmers are on land of low historic cost or are paying rents which bear little relation to present land costs. They also have no orthodox management structure. They do most of the work themselves, with at most one or two employees.

The landlords of Fountain Farming and a number of others, are probably extracting the highest rents they can. If rents can't be agreed, the dispute goes to arbitration. The arbitrator takes notice of rents tendered for the few farms which are available for letting. These tendered rents are often pitched at what orthodox farmers would say are unrealistically high levels.

In some cases those involved have other holdings at lower costs with which the high rents can be averaged. But much more likely they are tendered by men desperate to get into farming, and prepared to scrap, save and cut corners to survive.

This is a feature of farming elsewhere. In New Zealand for instance, a "share milker" will, if he provides the herd himself and does all the work, hand over to the farmer half the milk cheque.

If the young, New Zealand farmer buys his farm, he will own his herd and his milk cheque. This leaves no more than a living wage, and a possibility of being able to sell some capital gain when he retires. It is much the same in Denmark.

I can't believe that the

financial institutions which are buying an increasing acreage of land, some of it to let again, will for long resist the opportunity of exploiting their asset to the full by exacting the highest rents and partnership agreements. This is where the individual determined to farm and work will take his chance, even if it means bidding more than anyone else to get in.

In a competitive situation this is bound to mean that farmers with high overheads and other costs, whether corporate or private, will not be able to compete with the individual prepared, as the New Zealanders say, to live on the smell of an oily rag.

The implications of this should be studied by anyone who is responsible for investment in agriculture either as landowners or farmers. This applies to livestock as well as to other sections.

Pig and poultry products receive little support in the European Community except for a heavy import tariff. If production exceeds market demand, prices slump. At the same time prices, the source of much of their feed, are maintained at a very high level.

This situation has already greatly affected the long-standing members of the EEC. There is no development on the Continent of the massive poultry and pig farming companies which are such a feature in Britain. This form of husbandry in Europe is almost entirely in the hands of the smaller family farmer who can

stand being squeezed, since they don't have to worry about overheads.

It is possible to see scope for the development of a "share" farming in this field in Britain as a means of giving the workers an incentive. It could perhaps bring a retreat from the virtual industrialisation of some sections of this industry.

The low cost production unit of the Milk Marketing Board has recently reported that its profitability per unit and efficiency goes the smaller producer is just as successful as the large one.

In dairying the advantages of scale appear to be far more apparent than real. If ever there should be a squeeze on dairy farming there is no doubt that here again the smaller unit could survive.

The main thrust of institutional investment has been in arable farming in the better areas. Profits here have been very good, particularly in the two potato boom years of 1975 and 1976. But now that the situation is returning to normal, and costs of all inputs are rising, the farming sense of investing up to £2,000 an acre in land is open to question.

Apart from holding the land for longer capital gain, or an inflation hedge, the only way in which such an investment can be justified is exploiting the demand for land from people determined to get into farming whatever the difficulties and hardship. Such people never count the cost of the independence they hope to gain.

## Dull start for NZ wool sales

By Our Commodities Staff

THE NEW ZEALAND wool sales for the 1978-79 season opened on a dull note at Dunedin yesterday. Prices were little changed from those at the closing Auckland sales in June.

Average selling price was calculated at 199.67 cents a kilo, meaning that a Government supplementary payment of 2.70 cents is due on all wool sold at the sale and privately up to August 21.

In Australia meanwhile, the first tone at the week's opening auctions was maintained at the Fremantle and Sydney sales, with relatively minor support buying by the Australian Wool Corporation.

## Guayule 'no threat to rubber'

BY WONG SULONG

KUALA LUMPUR, August 17.

THE GUAYULE desert plant, which is on trial in the U.S. as a possible alternative for rubber, has not appeared to pose a threat to natural rubber, Tan Sri Sekhar, chairman of the Malaysian Rubber Research and Development Board, said here today.

Tan Sri Sekhar, who recently visited the guayule experimental station during a tour of the U.S., said that guayule shrubs are low in productivity, and rubber derived from them was inferior to natural rubber.

Guayule rubber has many similar qualities as synthetic rubber and should the plant

prove to be economically viable, it could pose as a competitor to synthetic rather than natural rubber.

He noted a genuine feeling of concern among U.S. rubber consumers about the ability of Southeast Asian countries to supply adequate rubber in the medium and long term, and the result of this insecurity.

He claimed the U.S. Administration was going ahead to build its rubber stockpile to 500,000 tonnes, although it is still a major question when it would start buying.

At the same time, the U.S. appeared to be giving positive support to the United-sponsored

international rubber price stabilisation scheme, which would see a buffer stockpile of 700,000 tonnes under the scheme, than 300,000 to 400,000 tonnes preferred by the European consumers, he added.

This was one point of contention which held consuming nations back from agreeing on their draft of the rubber stabilisation scheme when they last met in Geneva in July.

The U.S. also wants large quantities of this stockpile to be located in consuming countries, particularly the U.S., as opposed to the producers' proposal that the stockpile be held in producing countries.

## Stable output for world cotton forecast

WASHINGTON, August 17.

WORLD COTTON production in 1978-79 is projected at 64m bales (480 lb each)—about equal to the 63.7m bales produced in 1977-78, the U.S. Agricultural Department stated, reports Reuters.

Its summary of a foreign agriculture service report to be issued later this month said world consumption is likely to increase about 1m bales to 62m in 1978-79.

World cotton stocks were estimated at 22.7m bales on August 1, compared with 20.5m bales a year ago.

## COMMODITY MARKET REPORTS AND PRICES

## BASE METALS

COPPER—Last round in active trading on the London Metal Exchange after opening at \$74 forward market fell away in the morning following the uncertainty in the U.S. overnight and uncertainty over currency fluctuations which led to a sharp decline in the price of copper.

At the close, copper was 73.5-74.5, 3 months 73.5-74.5, 6 months 73.5-74.5, 9 months 73.5-74.5, 12 months 73.5-74.5, 15 months 73.5-74.5, 18 months 73.5-74.5, 21 months 73.5-74.5, 24 months 73.5-74.5, 27 months 73.5-74.5, 30 months 73.5-74.5, 33 months 73.5-74.5, 36 months 73.5-74.5, 39 months 73.5-74.5, 42 months 73.5-74.5, 45 months 73.5-74.5, 48 months 73.5-74.5, 51 months 73.5-74.5, 54 months 73.5-74.5, 57 months 73.5-74.5, 60 months 73.5-74.5, 63 months 73.5-74.5, 66 months 73.5-74.5, 69 months 73.5-74.5, 72 months 73.5-74.5, 75 months 73.5-74.5, 78 months 73.5-74.5, 81 months 73.5-74.5, 84 months 73.5-74.5, 87 months 73.5-74.5, 90 months 73.5-74.5, 93 months 73.5-74.5, 96 months 73.5-74.5, 99 months 73.5-74.5, 102 months 73.5-74.5, 105 months 73.5-74.5, 108 months 73.5-74.5, 111 \* New time "dealings" may take place  
from 10.30 a.m. two business days earlier.

Although at the higher end of expectations, the money supply figures appeared to have been well discounted and had little impact on stock market sentiment yesterday. The extension of the supplementary deposits scheme for a further eight months failed to benefit British funds, but the tone in this sector was no worse than quietly dull. Short-dated issues encountered some nervous selling ahead of the money supply figures which were mainly reflected in the day's reaction, however, was also attributed to the absence of buyers following the moves by President Carter to strengthen the dollar which led to uncertainty about the business of short-term interest rates. Long recorded losses of 1 and the Government Securities index gave up 20 to 70.89.

Leading Industrials opened firmly before drifting back to close with small losses. Up 2.3 at its best of the day at 10 a.m. the FT 30-share index finished 0.7 down on balance at 509.3. Trade was at a fairly low ebb—official markings of 4,997 compared with last week's daily average of over 6,000—but there was a considerable amount of activity in the market, while some institutional interest was also in evidence.

Overall, equity markets presented a mixed appearance, but falls just had the edge over gains in FT-quoted Industrials, but there was no notable change in the FT-Actuaries All-Share index at 235.55.

The good recovery movement in the dollar which in turn brought about a fall of 84¢ to 208¢ in the dollar price prompted a sharp reaction in Gold mining shares yesterday. Substantial falls were reflected in the Gold Mines index which fell 8.3 more to 187.9.

Institutional and arbitrage selling and a further edge over investment currency on sales of gold shares depressed the premium yesterday from an opening of 101½ pence to a day's low of 98½ pence for a net loss of 14 on the overnight level. The conversion factor was 0.6666 (0.6572).

Quiet trading conditions again prevailed in Traded Options and only 344 contracts had been completed by the close compared with the previous day's 437. It was confirmed yesterday that trade will commence on September 18 in five new stocks, BOC, Boots, EMI, Imperial Group and Rio Tinto-Zinc.

## Australian banks up

Australian banks came to the fore in the banking sector, rising in the wake of the Federal budget Bank of New South Wales firming 20 to 506p and ANZ 13 to 300p. Home banks were initially unmoved by the disclosure that interest rate cuts are to be extended a further eight months beyond November, but turned easier late to close with falls of 4 to 188p. Discounts took a turn for the worse with Union a notable casualty at 325p, down 20. Rea Bros. declined 3 to 53p in merger talks following the un-inspirational interim report but Arbutnot Latham added 5 to 188p.

Despite reporting first-half profits at the top end of market estimates, Raylors closed 5 cheaper at 390p. Other Composite Insurances closed a shade easier with Commercial Union 2 off at 236p. Dairies were down at 236p. Dairies were down at 236p.

Scottish and Newcastle were dull late at 67p, down 21p, on disappointment with the chairman's remarks at the annual meeting. Other Breweries fluctuated narrowly and closed with little alteration.

Some good gains were recorded in Contracting issues, John Laing A put on 9 more to 215p on the chairman's intentions to live off their property interests. Richard Costain, 218p, and Taylor Woodrow, 440p, added 8 and 10 respectively. Revolving Construction closed unaltered at 20p; the price in yesterday's issue was incorrect. Buyers returned for Brown and Jackson which firmed 10p to 188p, but account in shares left Phoenix Timber 3 easier at 160p.

ICI trade around the overnight level for most of the session and closed a couple of pence higher at 402p.

## Bourse easier

Gussies "A" 514p, and British version factor was 0.6666 (0.6572).

Generally easier Store leaders, while F. W. Woolworth softened a penny to 713p following cautious comment on the interim results. Elsewhere, profit-taking in the absence of fresh bid news left Bourne and Hoffmingsworth 3 lower at 263p.

Royal Electronics returned to favour in Electricals, closing 8 better at 314p, after 516p. Renewed bid speculation lifted

at 64p, while Eros lost 3 to 37p in reaction to the disappointing interim results. News that the group is bracing itself for possible losses of around 4m at the Glasgow subsidiary prompted a fall of 2 to 28p in Barrow Hepburn.

Interest in Motors and Distributors centred on Lex Service which eased 3 to 88p in active trading on the 58m fund-raising plans which accompanied the

hardened 15 to 630p in a limited market. Following news of the contract exchange for the 58m sale of the group's office property in Brussels, Bernard Sunley advanced 10 to 28p. Town Centre became a good market and put on 4 to 73p, and Great Portland Estates, at 307p, regained nearly all of the previous day's fall of 6. Chaddeley Investments added 3 more to 53p on continued demand following the recent major reorganisation and merger with Greycoat Estates. Others to progress included Haslemere Estates, 4 better at 238p, and City Offices, 3 to the good at 62p.

BP firm

Dealers registered slight disappointment with Shell's half-year returns, but an initial mark-down to 36p met resistance and shares recovered to close 568p. Investment premium influences were responsible for the fall of a point to 512p in Royal Dutch (RDB) were initially supported to 374p on news of successful drilling tests in the Brae Field, but in the absence of follow-through drifted down to close a couple of pence lower on balance at 368p.

Among Overseas Traders, William Jacks eased a penny to 29p following the preliminary figures.

Investment Trusts fluctuated narrowly before closing little changed on the previous day's close. Dalgety, which reported preliminary figures for September, was supported to 314p on financials with an improvement of 8 to 303p. Interest was shown in Haw Par, 14 up at 63p. Following the 90c bid from the U.S.-based J. M. Huber Corp., dealings were resumed in American Association on a 31p to 315p basis, compared with the pre-suspension price of 175p.

Following details of the 14m compensation the company is receiving from the government for the nationalisation of the Austin and Pickersill concern, shares

substantially improved interim figures. Lucas Industries ended 4 cheaper at 322p. Commercial vehicles edged higher following news that the recent buoyant pattern of sales in the UK had continued in July.

In Newspapers, Liverpool Daily Post firmed 7 to 147p on speculative country buying. Independent also found support, and added 6 to 188p.

Properties again demonstrated the underlying firm tendency, and selected issues recorded reasonable gains. British Land improved 1½ to 41p, with the 12 per cent Convertible 6 points at a 1978 peak of 162p. Hammerson "A"

Publicity given to a broker's circular directed attention to Nurdin and Peaseack which improved 5 to 91p. News that the group had a rise of 15 to 18p in response to the doubled annual profits and proposed 100 per cent scrip-issue, and Hunting Associated put on 11 to 304p on revived investment support in a market none too well supplied with stock. Speculative buying fuelled by vague bid suggestions helped United Carriers improve 3 to 97p, while improvements of 4 and 6 respectively were seen in Gripperoids, 51p, and Western Board Mills, 86p. The absence of news of the bid discussions left Peacocks of Birmingham 4 lower at 232p.

Norton and Wright good

Wednesday's irregular trend was repeated in miscellaneous Industrial leaders. Renewed investment support ahead of the 100 per cent scrip-issue on September 4 helped Pilkington put on 2 to 616p, while Glaxo firmed 5 to 616p, Bowater cheapened 3 to 186p, after 193p; the interim results are due on September 11. In secondary issues, Norton and Wright did well with a rise of 15 to 18p in response to the doubled annual profits and proposed 100 per cent scrip-issue, and Hunting Associated put on 11 to 304p on revived investment support in a market none too well supplied with stock. Speculative buying fuelled by vague bid suggestions helped United Carriers improve 3 to 97p, while improvements of 4 and 6 respectively were seen in Gripperoids, 51p, and Western Board Mills, 86p. The absence of news of the bid discussions left Peacocks of Birmingham 4 lower at 232p.

Publicity given to a broker's circular directed attention to Nurdin and Peaseack which improved 5 to 91p. News that the group had a rise of 15 to 18p in response to the doubled annual profits and proposed 100 per cent scrip-issue, and Hunting Associated put on 11 to 304p on revived investment support in a market none too well supplied with stock. at 64p, while Eros lost 3 to 37p in reaction to the disappointing interim results. News that the group is bracing itself for possible losses of around 4m at the Glasgow subsidiary prompted a fall of 2 to 28p in Barrow Hepburn.

Interest in Motors and Distributors centred on Lex Service which eased 3 to 88p in active trading on the 58m fund-raising plans which accompanied the

hardened 15 to 630p in a limited market. Following news of the contract exchange for the 58m sale of the group's office property in Brussels, Bernard Sunley advanced 10 to 28p. Town Centre became a good market and put on 4 to 73p, and Great Portland Estates, at 307p, regained nearly all of the previous day's fall of 6. Chaddeley Investments added 3 more to 53p on continued demand following the recent major reorganisation and merger with Greycoat Estates. Others to progress included Haslemere Estates, 4 better at 238p, and City Offices, 3 to the good at 62p.

BP firm

Dealers registered slight disappointment with Shell's half-year returns, but an initial mark-down to 36p met resistance and shares recovered to close 568p. Investment premium influences were responsible for the fall of a point to 512p in Royal Dutch (RDB) were initially supported to 374p on news of successful drilling tests in the Brae Field, but in the absence of follow-through drifted down to close a couple of pence lower on balance at 368p.

Among Overseas Traders, William Jacks eased a penny to 29p following the preliminary figures.

Investment Trusts fluctuated narrowly before closing little changed on the previous day's close. Dalgety, which reported preliminary figures for September, was supported to 314p on financials with an improvement of 8 to 303p. Interest was shown in Haw Par, 14 up at 63p. Following the 90c bid from the U.S.-based J. M. Huber Corp., dealings were resumed in American Association on a 31p to 315p basis, compared with the pre-suspension price of 175p.

Following details of the 14m compensation the company is receiving from the government for the nationalisation of the Austin and Pickersill concern, shares

substantially improved interim figures. Lucas Industries ended 4 cheaper at 322p. Commercial vehicles edged higher following news that the recent buoyant pattern of sales in the UK had continued in July.

In Newspapers, Liverpool Daily Post firmed 7 to 147p on speculative country buying. Independent also found support, and added 6 to 188p.

Properties again demonstrated the underlying firm tendency, and selected issues recorded reasonable gains. British Land improved 1½ to 41p, with the 12 per cent Convertible 6 points at a 1978 peak of 162p. Hammerson "A"

Publicity given to a broker's circular directed attention to Nurdin and Peaseack which improved 5 to 91p. News that the group had a rise of 15 to 18p in response to the doubled annual profits and proposed 100 per cent scrip-issue, and Hunting Associated put on 11 to 304p on revived investment support in a market none too well supplied with stock.
